#### **Bond Ratings** (unaudited)

The definitions of the applicable rating symbols are set forth below:

Standard & Poor s Ratings Service (Standard & Poor s) Ratings from AA to CCC may be modified by the addition of a plus (+) or minus () sign to show relative standings within the major rating categories.

AAA

AA

Α

BBB

BB, B, CCC, CC and C

D

Bonds rated AAA have the highest rating assigned by Standard & Poor s. Capacity to pay interest and repay principal is extremely strong.

Bonds rated AA have a very strong capacity to pay interest and repay principal and differ from the highest rated issues only in a small degree.

Bonds rated A have a strong capacity to pay interest and repay principal although they are somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than debt in higher rated categories.

Bonds rated BBB are regarded as having an adequate capacity to pay interest and repay principal. Whereas they normally exhibit adequate protection parameters, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to pay interest and repay principal for bonds in this category than in higher rated categories.

Bonds rated BB, B, CCC, CC and C are regarded, on balance, as predominant speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation. BB represents the lowest degree of speculation and C the highest degree of speculation. While such bonds will likely have some quality and protective characteristics, these are outweighed by large uncertainties or major risk exposures to adverse conditions.

Bonds rated D are in default and payment of interest and/or repayment of principal is in arrears.

*Moody s Investors Service* ( *Moody s* ) Numerical modifiers 1, 2 and 3 may be applied to each generic rating from Aa to Caa, where 1 is the highest and 3 the lowest ranking within its generic category.

Aaa

Aa

Α

Baa

Bonds rated Aaa are judged to be of the best quality. They carry the smallest degree of investment risk and are generally referred to as gilt edge. Interest payments are protected by a large or by an exceptionally stable margin and principal is secure. While the various protective elements are likely to change, such changes as can be visualized are most unlikely to impair the fundamentally strong position of such issues.

Bonds rated Aa are judged to be of high quality by all standards. Together with the Aaa group they comprise what are generally known as high grade bonds. They are rated lower than the best bonds because margins of protection may not be as large as in Aaa securities or fluctuation of protective elements may be of greater amplitude or there may be other elements present which make the long-term risks appear somewhat larger than in Aaa securities.

Bonds rated A possess many favorable investment attributes and are to be considered as upper medium grade obligations. Factors giving security to principal and interest are considered adequate but elements may be present which suggest a susceptibility to impairment some time in the future.

Bonds rated Baa are considered as medium grade obligations, i.e., they are neither highly protected nor poorly secured. Interest payments and principal security appear adequate for the present but certain protective elements may be lacking or may be characteristically unreliable over any great length of time. Such bonds lack outstanding investment characteristics and in fact have speculative characteristics as well.

Bonds rated Ba are judged to have speculative elements; their future cannot be considered as well assured. Often the protection of interest and principal payments may be very moderate and therefore

10

Ba

NR

not well safeguarded during both good and bad times over the future. Uncertainty of position characterizes bonds in this class.

Bonds rated B generally lack characteristics of desirable investments. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.

Bonds rated Caa are of poor standing. These may be in default, or present elements of danger may exist with respect to principal or interest.

Bonds rated Ca represent obligations which are speculative in a high degree. Such issues are often in default or have other marked short-comings.

Bonds rated C are the lowest class of bonds and issues so rated can be regarded as having extremely poor prospects of ever attaining any real investment standing.

Bonds rated AAA have the highest rating assigned by Fitch. Capacity to pay interest and repay principal is extremely strong.

Bonds rated AA have a very strong capacity to pay interest and repay principal and differ from the highest rated issues only in a small degree.

Bonds rated A have a strong capacity to pay interest and repay principal although they are somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than debt in higher rated categories.

Bonds rated BBB are regarded as having an adequate capacity to pay interest and repay principal. Whereas they normally exhibit adequate protection parameters, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to pay interest and repay principal for bonds in this category than in higher rated categories.

Bonds rated BB, B, CCC and CC are regarded, on balance, as predominantly speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation. BB represents a lower degree of speculation than B, and CC the highest degree of speculation. While such bonds will likely have some quality and protective characteristics, these are outweighed by large uncertainties or major risk exposures to adverse conditions.

Standard & Poor s highest rating indicating very strong or strong capacity to pay principal and interest; those issues determined to possess overwhelming safety characteristics are denoted with a plus (+) sign.

Standard & Poor s highest commercial paper and variable-rate demand obligation (VRDO) rating indicating that the degree of safety regarding timely payment is either overwhelming or very strong; those issues determined to possess overwhelming safety characteristics are denoted with a plus (+) sign.

Moody s highest rating for issues having a demand feature VRDO.

Moody s highest rating for short-term municipal obligations. Moody s highest rating for commercial paper and for VRDO prior to the advent of

the VMIG 1 rating.

Fitch s highest rating indicating the strongest capacity for timely payment of financial commitments; those issues determined to possess overwhelming strong credit feature are denoted with a plus (+) sign.

Indicates that the bond is not rated by Standard & Poor s, Moody s or Fitch Ratings Service.

#### 1. Organization and Significant Accounting Policies

Western Asset Intermediate Muni Fund Inc. (the Fund ) was incorporated in Maryland and is registered as a diversified, closed-end management investment company under the Investment Company Act of 1940, as amended (the 1940 Act ).

The following are significant accounting policies consistently followed by the Fund and are in conformity with U.S. generally accepted accounting principles ( GAAP ).

- (a) Investment Valuation. Securities are valued at the mean between the bid and asked prices provided by an independent pricing service that are based on transactions in municipal obligations, quotations from municipal bond dealers, market transactions in comparable securities and various other relationships between securities. Securities for which market quotations are not readily available or are determined not to reflect fair value, will be valued in good faith by or under the direction of the Fund s Board of Directors. Short-term obligations with maturities of 60 days or less are valued at amortized cost, which approximates market value.
- (b) Financial Futures Contracts. The Fund may enter into financial futures contracts typically to hedge a portion of the portfolio. Upon entering into a financial futures contract, the Fund is required to deposit cash or securities as initial margin. Additional securities are also segregated up to the current market value of the financial futures contracts. Subsequent payments, known as variation margin, are made or received by the Fund each day, depending on the daily fluctuation in the value of the underlying financial instruments. The Fund recognizes an unrealized gain or loss equal to the daily variation margin. When the financial futures contracts are closed, a realized gain or loss is recognized equal to the difference between the proceeds from (or cost of) the closing transactions and the Fund s basis in the contracts.

The risks associated with entering into financial futures contracts include the possibility that a change in the value of the contract may not correlate with the changes in the value of the underlying instruments. In addition, investing in financial futures contracts involves the risk that the Fund could lose more than the original margin deposit and subsequent payments required for a futures transaction. Risks may also arise upon entering into these contracts from the potential inability of the counterparties to meet the terms of their contracts.

(c) Inverse Floaters. The Fund may participate either in structuring an inverse floater or purchasing an inverse floater in the secondary market. An inverse floater generally has a floating or variable rate of interest that moves in the opposite direction of market interest rates. So, when short term interest rates move in an upward direction, the interest rate paid on the inverse floater decreases, and vice versa when market interest rates decrease. Inverse floaters also generally respond more rapidly to market interest rate changes than fixed rate securities. Inverse floaters are subject to interest rate and leveraging risks.

When structuring an inverse floater, the Fund will transfer to a trust fixed-rate tax-exempt municipal bonds purchased by the Fund. The trust then typically issues two traunches of variable rate securities that are collateralized by the cash flows of the fixed-rate tax-exempt municipal bonds. The two traunches are known as an inverse floater and a variable rate demand obligation (VRDO). The VRDO pays interest based on a floating rate set by a remarketing agent at predetermined intervals. The inverse floater, also known as a residual interest tax-exempt security (a RITES), is transferred to the Fund, which receives interest based on the remaining cash flow of the trust, after payment of interest on the VRDO and various expenses of the trust. When structuring an inverse floater, the Fund would also be required to retain the municipal bond on its balance sheet and recognize a liability for the VRDO traunch of the trust, along with the periodic interest expense associated with the VRDO. Both the municipal bond and the VRDO are marked to market when the Fund determines its net asset value.

When the Fund purchases an inverse floater in the secondary market, it is required to mark the inverse floater to market when determining net asset value. Interest income is accrued as earned and unrealized gains or losses are recognized when marked to market.

As of March 31, 2007 the Fund held \$9,381,257 of municipal bonds that represent participation in three trusts which issued \$4,355,000 of secured borrowings. Also, as of March 31, 2007, the Fund held an inverse floater that was acquired in the secondary market.

(d) Security Transactions. Security transactions are accounted for on a trade date basis.

12

#### Notes to Schedule of Investments (unaudited) (continued)

#### 2. Investments

At March 31, 2007, the aggregate gross unrealized appreciation and depreciation of investments for federal income tax purposes were substantially as follows:
