Registrant's telephone number, including area code: **(604) 683-6332**

Securities registered pursuant to Section 12(b) of the Act:

**Title of Each Class:**  
**Common Shares, no par value**

**Name of Each Exchange on Which Registered:**  
**NYSE MKT**

Securities registered pursuant to Section 12(g) of the Act: **N/A**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes  No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes  No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes  No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or

Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

for such shorter period that the registrant was required to submit and post such files). Yes  No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K (§ 229.405 of this chapter) is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act.

Large accelerated filer	<input type="checkbox"/>	Accelerated filer	<input checked="" type="checkbox"/>
Non-accelerated filer	<input type="checkbox"/> (Do not check if a smaller reporting company)	Smaller reporting company	<input type="checkbox"/>

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes  No

Based on the last sale price on the NYSE MKT of the registrant's Common Shares on June 28, 2013 (the last business day of the registrant's most recently completed second fiscal quarter) of \$0.65 per share, the aggregate market value of the voting stock held by non-affiliates of the registrant was approximately \$56,128,863.

As of March 10, 2014, the registrant had 98,068,638 Common Shares outstanding.

**DOCUMENTS INCORPORATED BY REFERENCE**

To the extent specifically referenced in Part III, portions of the registrant's definitive Proxy Statement on Schedule 14A to be filed with the Securities and Exchange Commission in connection with the registrant's 2014 Annual Meeting of Shareholders are incorporated by reference into this report.

**CAUTIONARY NOTE TO U.S. INVESTORS REGARDING ESTIMATES OF MEASURED, INDICATED AND INFERRED RESOURCES AND PROVEN AND PROBABLE RESERVES**

International Tower Hill Mines Ltd. ( we , us , our, ITH or the Company ) is a mineral exploration company engaged in the acquisition and exploration of mineral properties. As used in this Annual Report on Form 10-K, the terms mineral reserve , proven mineral reserve and probable mineral reserve are Canadian mining terms as defined in accordance with Canadian National Instrument 43-101 Standards of Disclosure for Mineral Projects ( NI 43-101 ) and the Canadian Institute of Mining, Metallurgy and Petroleum (the CIM ) CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as amended. These definitions differ from the definitions in the United States Securities and Exchange Commission ( SEC ) Industry Guide 7 ( SEC Industry Guide 7 ). Under SEC Industry Guide 7 standards, a final or bankable feasibility study is required to report reserves, the three-year historical average price is used in any reserve or cash flow analysis to designate reserves, and the primary environmental analysis or report must be filed with the appropriate governmental authority. In addition, the terms mineral resource , measured mineral resource , indicated mineral resource and inferred mineral resource are defined in and required to be disclosed by NI 43-101; however, these terms are not defined terms under SEC Industry Guide 7 and are normally not permitted to be used in reports and registration statements filed with the SEC. Investors are cautioned not to assume that all or any part of a mineral deposit in these categories will ever be converted into reserves.

Inferred mineral resources have a great amount of uncertainty as to their existence, and great uncertainty as to their economic and legal feasibility. It cannot be assumed that all, or any part, of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies, except in rare cases. Investors are cautioned not to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable.

Disclosure of contained ounces in a resource is permitted disclosure under Canadian regulations; however, the SEC normally only permits issuers to report mineralization that does not constitute reserves by SEC standards as in place tonnage and grade without reference to unit measures. Accordingly, information contained in this report and the documents incorporated by reference herein contain descriptions of our mineral deposits that may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

The term mineralized material as used in this Annual Report on Form 10-K, although permissible under SEC Industry Guide 7, does not indicate reserves by SEC Industry Guide 7 standards. We cannot be certain that any part of the mineralized material will ever be confirmed or converted into SEC Industry Guide 7 compliant reserves . Investors are cautioned not to assume that all or any part of the mineralized material will ever be confirmed or converted into reserves or that mineralized material can be economically or legally extracted.

**CAUTIONARY NOTE TO ALL INVESTORS CONCERNING ECONOMIC ASSESSMENTS THAT INCLUDE INFERRED RESOURCES**

The Company currently holds or has the right to acquire interests in an advanced stage exploration project in Alaska referred to as the Livengood Gold Project (the Livengood Gold Project or the Project ). Mineral resources that are not mineral reserves have no demonstrated economic viability. The preliminary assessments on the Project are preliminary in nature and include inferred mineral resources that have a great amount of uncertainty as to their existence, and are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. It cannot be assumed that all, or any part, of an inferred mineral resource will ever be upgraded to a higher category. Under Canadian rules, estimates of inferred mineral resources may not form the basis of feasibility or pre-feasibility studies. There is no certainty that such inferred mineral resources at the Project will ever be realized. Investors are cautioned not

to assume that all or any part of an inferred mineral resource exists or is economically or legally mineable.

**FORWARD LOOKING STATEMENTS**

This Annual Report on Form 10-K contains forward-looking statements or information within the meaning of the United States Private Securities Litigation Reform Act of 1995 concerning anticipated results and developments in the operations of the Company in future periods, planned exploration activities, the adequacy of the Company's financial resources and other events or conditions that may occur in the future. Forward-looking statements are frequently, but not always, identified by words such as expects, anticipates, believes, intends, estimates, potential, possible and similar expressions, or statements that events, conditions or results will, may, could or should (or the negative and grammatical variations of any of these terms) occur or be achieved. These forward looking statements may include, but are not limited to, statements concerning:

- the Company's strategies and objectives, both generally and specifically in respect of the Livengood Gold Project;
- the potential for the expansion of the estimated resources at the Livengood Gold Project;
- the potential for a production decision concerning, and any production at, the Livengood Gold Project;
- the potential for cost savings due to the high gravity gold concentration component of some of the Livengood Gold Project mineralization;
- the sequence of decisions regarding the timing and costs of development programs with respect to, and the issuance of the necessary permits and authorizations required for, the Livengood Gold Project;
- the Company's estimates of the quality and quantity of the resources at the Livengood Gold Project;
- the timing and cost of the planned future exploration programs at the Livengood Gold Project, and the timing of the receipt of results therefrom;
- the Company's future cash requirements;

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

- general business and economic conditions, including changes in the price of gold and the overall sentiment of the markets for public equity;
- the Company's ability to meet its financial obligations as they come due, and to be able to raise the necessary funds to continue operations on acceptable terms, if at all;
- the ability of the Company to continue to refine the project economics for the Livengood Gold Project;
- the potential for opportunities to reduce capital costs for the Livengood Gold Project;
- the potential for opportunities to improve the economics of the Livengood Gold Project by reducing certain costs, including through the reduction of reagent consumption and energy costs, and improving recovery through intensive cyanide leach of gravity concentrates; and
- the potential for opportunities to improve the economics of the Livengood Gold Project by enhancing mill head grades through stockpile management strategies and/or additional test work to confirm drill assays of the resource.

Such forward-looking statements reflect the Company's current views with respect to future events and are subject to certain known and unknown risks, uncertainties and assumptions. Many factors could cause actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements, including, among others:

- the demand for, and level and volatility of the price of, gold;

Table of Contents

- general business and economic conditions;
  
- government regulation and proposed legislation (and changes thereto or interpretations thereof);
  
- defects in title to other claims, or the ability to obtain surface rights, either of which could affect our property rights and claims;
  
- the timing of the receipt of regulatory and governmental approvals, permits and authorizations necessary to implement and carry on the Company's planned exploration and potential development program at the Livengood Gold Project;
  
- conditions in the financial markets generally, the overall sentiment of the markets for public equity, interest rates and currency rates;
  
- the Company's ability to secure the necessary consulting, drilling and related services and supplies on favorable terms in connection with its drilling program at the Livengood Gold Project and other activities;
  
- the Company's ability to attract and retain key staff, particularly in connection with the permitting and development of any mine at the Livengood Gold Project;
  
- the accuracy of the Company's resource estimates (including with respect to size and grade) and the geological, operational and price assumptions on which these are based;
  
- the timing of the ability to commence and complete planned work programs at the Livengood Gold Project;
  
- the terms of the consents, permits and authorizations necessary to carry out planned exploration and development programs at the Livengood Gold Project and the Company's ability to comply with such terms on a safe and cost-effective basis;
  
- the ongoing relations of the Company with the lessors of its property interests and applicable regulatory agencies;

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

- the metallurgy and recovery characteristics of samples from certain of the Company's mineral properties and whether such characteristics are reflective of the deposit as a whole; and
- the continued development of and potential construction of any mine at the Livengood Gold Project property not requiring consents, approvals, authorizations or permits that are materially different from those identified by the Company.

Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described herein. This list is not exhaustive of the factors that may affect any of the Company's forward-looking statements. Forward-looking statements are statements about the future and are inherently uncertain, and actual achievements of the Company or other future events or conditions may differ materially from those reflected in the forward-looking statements due to a variety of risks, uncertainties and other factors, including without limitation those discussed in Part I, Item 1A, Risk Factors, of this Annual Report on Form 10-K, which are incorporated herein by reference, as well as other factors described elsewhere in this report and the Company's other reports filed with the SEC.

The Company's forward-looking statements contained in this Annual Report on Form 10-K are based on the beliefs, expectations and opinions of management as of the date of this report. The Company does not assume any obligation to update forward-looking statements if circumstances or management's beliefs, expectations or opinions should change, except as required by law. For the reasons set forth above, investors should not attribute undue certainty to or place undue reliance on forward-looking statements.

**PART I**

**ITEM 1. BUSINESS**

**Overview**

ITH is a mineral exploration company engaged in the acquisition and exploration of mineral properties. The Company currently holds or has the right to acquire interests in an advanced stage exploration project in Alaska referred to as the Livengood Gold Project. The Company is in the exploration stage as its property has not yet begun preparation for extraction of a deposit or reached commercial production. The Company controls 100% of the Livengood Gold Project with a mineral resource of 731 million Measured tonnes at an average grade of 0.61 g/tonne (14.4 million ounces at 0.3 g/tonne cut-off), 71 million Indicated tonnes at an average grade of 0.56 g/tonne (1.3 million ounces at 0.3 g/tonne cut-off) and 266 million Inferred tonnes at an average grade of 0.52 g/tonne (4.4 million ounces at 0.3 g/tonne cut-off). On July 23, 2013 the Company issued the results of a feasibility study (the Feasibility Study) which converted a portion of the Company's mineral resources into proven reserves of 434 million tonnes at an average grade of 0.69 g/tonne (9.6 million ounces) and probable reserves of 20 million tonnes at an average grade of 0.70 g/tonne (454,000 ounces). All work presently planned by the Company is directed at maintaining necessary environmental baseline activities at the Livengood Gold Project and focusing efforts on project optimization opportunities, including those identified in the Feasibility Study and those subsequently developed by the Company. A more complete description of the Livengood Gold Project and the results of the Feasibility Study is set forth in Part II, Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, of this Annual Report on Form 10-K.

Since 2006, the Company has focused primarily on the acquisition and exploration of mineral properties in Alaska and Nevada by acquiring through staking, purchase, lease or option (primarily from AngloGold Ashanti (U.S.A.) Exploration Inc. (AngloGold)) in a transaction which closed on August 4, 2006) interests in a number of mineral properties in Alaska (Livengood, Terra, LMS, BMP, Chisna, Coffee Dome, West Tanana, Gilles, West Pogo, Caribou, Blackshell and South Estelle) and Nevada (North Bullfrog and Painted Hills) that it believed had the potential to host large precious or base metal deposits. Some of these, such as the Painted Hills, Gilles, West Tanana, Caribou and Blackshell properties, were, in light of disappointing exploration results, dropped or returned to the respective optionors or lessors, and the associated costs written off while others, such as the South Estelle property, have been sold. Since early 2008, the Company's primary focus has been the exploration and advancement of its Livengood Gold Project in Alaska and the majority of its resources have been directed to that end. To this end, in August 2010, ITH undertook a corporate spin-out arrangement transaction whereby all of its mineral property interests other than the Livengood property were transferred to Corvus and Corvus was spun out as an independent and separate public company. Following the completion of that transaction, the sole mineral property held by the Company is the Livengood Gold Project. Since the completion of such transaction, the Company has focused exclusively on the ongoing exploration and potential development of the Livengood Gold Project.

The head office and principal administrative address of ITH is located at Suite 2300 1177 West Hastings Street, Vancouver, British Columbia, Canada V6E 2K3, and its registered and records office is located at 1300 777 Dunsmuir Street, Vancouver, BC V6B 1N3.

**Recent Developments**

*Livengood Gold Project Developments*

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

During the year ended December 31, 2013 and to the date of this report, the Company advanced its Livengood Gold Project in Alaska with the issuance of the Feasibility Study. The Feasibility Study had been underway since early 2012. The Feasibility Study evaluated a 100,000 ton per day project that would produce 8 million ounces of gold over 14 years. Using the trailing three year gold price of \$1,500 per ounce, the project generates a minimal positive return. A more complete description of the Feasibility Study is set forth in Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, under Livengood Gold Project Feasibility Study Results. The Company is currently investigating a number of opportunities, including those identified in the Feasibility Study and those subsequently developed by the Company for optimization and reducing project costs.

Table of Contents

The Company believes that mill throughput and production schedule optimization studies may provide opportunities to reduce project capital costs. A lower mill throughput may offer an opportunity to enhance mill head grades in early years by a more aggressive stockpile management strategy than is assumed in the Feasibility Study.

The Company will also continue to advance environmental baseline work in support of future permitting in order to better position the Livengood Gold Project for a construction decision when warranted by market conditions.

There is also opportunity to expand the mineable resource by increasing the in-pit resource, as additional drilling may improve the classification of the material contained within the pit. Additional drilling may expand the resource at depth and to the southwest, incorporating mineralized material below the current grade model. Multiple exploration targets have been identified and may increase the resource with additional exploration.

The Company has also identified several opportunities to improve the performance of the Project that warrant further study, including verification of preliminary indications of a higher head grade, verify modeling to improve recovery through intensive cyanide leach reactors, and reducing reagent consumption and energy costs.

*Management Reorganization*

In December 2013 the Company announced a reorganization of senior management and its Board of Directors and a reduction in the Company's full time staff by approximately 30% effective January 1, 2014. These changes were made to focus the Company's efforts on project optimization opportunities, maintenance of environmental baseline activities required for permitting, and advancing discussions with companies holding confidentiality agreements.

In connection with the reorganization, Thomas E. Irwin was appointed as President and Chief Executive Officer of the Company effective January 1, 2014. Mr. Irwin had been serving as Vice President, supporting corporate strategic initiatives as well as being responsible for technical matters for the Livengood Gold Project. The Company entered into separation and consulting agreements with its former President and Chief Executive Don Ewingleben, who will serve as a consultant and counsel to the Company for a one-year period to assist the Company during the transition. As part of the Company's reorganization, effective January 1, 2014, Messrs. Don Ewingleben, Dan Carriere, Tim Haddon, and Roger Taplin resigned from the Board of Directors. Mr. Anton Drescher, Mr. Mark Hamilton and Mr. Thomas Weng remained on the Board of Directors.

*Appointment of Directors*

In January 2014 the Company announced the addition of Mr. Stephen Lang and Mr. John Ellis to the Board of Directors effective February 1, 2014. Mr. Lang was also elected Chairman of the Board.

**2014 Outlook**

During 2014, the Company will continue to investigate a number of opportunities as identified in the Feasibility Study for optimization and reducing project costs. The Company also plans to continue critical baseline environmental studies to maintain the integrity of five years of historical data already compiled.

In light of the decrease in the gold price in 2013 and its effect on the gold mining industry, the Company has prepared for the potential of a continuing lower gold price by limiting 2014 spending to essential activities. These activities include payment of annual land lease obligations, reviewing opportunities identified in the Feasibility Study as well as those subsequently developed by the Company continuing critical environmental baseline work to prevent any significant delays in future permitting, as well as performing required corporate and compliance matters. As part of the Company's efforts to reduce spending in 2014, the Company's full time staff was reduced by approximately 30% effective January 1, 2014.

The Company will continue to seek a strategic alliance to help support the future development of the Project while considering all other appropriate financing options. The strength of the gold asset, the favorable location, and the proven team are the reasons the Company would potentially attract a strategic partner with a long term development horizon who understands the Project is highly leveraged to gold prices. To date ITH has signed multiple confidentiality agreements with large and intermediate mining companies and has been reviewing the final Feasibility Study results as well as the various opportunities with those companies. In order to support the

Table of Contents

completion of these essential activities, the Company anticipates spending approximately \$8 million during the 2014 fiscal year ending December 31, 2014.

**Regulatory, Environmental and Social Matters**

All of the Company's currently proposed exploration is under the jurisdiction of the State of Alaska. In Alaska, low impact, initial stage surface exploration such as stream sediment, soil and rock chip sampling does not require any permits. The State of Alaska requires an APMA (Alaska Placer Mining Application) exploration permit for all substantial surface disturbances such as trenching, road building and drilling. These permits are also reviewed by related state and federal agencies that can comment and require specific changes to the proposed work plans to minimize impacts on the environment. The permitting process for significant disturbances generally requires 30 days for processing and all work must be bonded. The Company currently has all necessary permits with respect to its exploration activities in Alaska. Although the Company has never had an issue with the timely processing of APMA permits, there can be no assurances that delays in permit approval will not occur.

ITH has created a Technical Committee (formerly the Health, Occupational Safety & Environmental Committee), which has adopted a formal, written charter. As set out in its charter, the overall purpose of the Technical Committee is to assist the Board in fulfilling its oversight responsibilities with respect to the Company's continuing commitment to improving the environment and ensuring that activities are carried out and facilities are operated and maintained in a safe and environmentally sound manner that reflects the ideals and principles of sustainable development. The primary function of the Technical Committee is to monitor, review and provide oversight with respect to the technical aspects of the Company's projects as well as monitor policies, standards, accountabilities and programs relative to health, safety, community relations and environmental-related matters. The Technical Committee also advises the Board and makes recommendations for the Board's consideration regarding health, safety, community relations and environmental-related issues.

Although not set out in a specific policy, the Company strives to be a positive influence in the local communities where its mineral projects are located, not only by contributing to the welfare of such communities through donations of money and supplies, as appropriate, but also through hiring, when appropriate, local workers to assist in ongoing exploration programs. The Company considers building and maintaining strong relationships with such communities to be fundamental to its ability to continue to operate in such regions and to assist in the eventual development (if any) of mining operations in such regions, and it attaches considerable importance to commencing and fostering such relationships from the beginning of its involvement in any particular area.

**Corporate Structure**

ITH was incorporated under the *Company Act* (British Columbia) under the name Ashnola Mining Company Ltd. on May 26, 1978. ITH's name was changed to Tower Hill Mines Ltd. on June 1, 1988, and subsequently changed to International Tower Hill Mines Ltd. on March 15, 1991. ITH has been transitioned under, and is now governed by, the *Business Corporations Act* (British Columbia) (the BCBCA). On October 11, 2005, ITH filed a transition application under the BCBCA, reflecting the adoption by the shareholders, on October 29, 2004, of a new form of Articles to govern the affairs of ITH in substitution for the original articles adopted under the old *Company Act* (B.C.) and reflecting the increased flexibility available to companies under the BCBCA. On November 15, 2005, the shareholders resolved to amend the Articles to increase the authorized capital from 20,000,000 common shares without par value to 500,000,000 common shares without par value. A Notice of Articles in respect of such increase was filed on April 20, 2006, at which time such increase in authorized capital became effective.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

ITH has three material subsidiaries:

Tower Hill Mines, Inc. ( TH Alaska ), a corporation incorporated in Alaska on June 27, 2006, which holds most of the Company's Alaskan mineral properties and is 100% owned by ITH;

Tower Hill Mines (US) LLC, a limited liability company formed in Colorado on June 27, 2006, which carries on the Company's administrative and personnel functions and is wholly owned by TH Alaska; and

Table of Contents

Livengood Placers, Inc., a corporation incorporated in Nevada on June 11, 1998, which holds certain Alaskan properties and is 100% owned by TH Alaska.

The following corporate chart sets forth all of ITH's material subsidiaries:

**Segment and Geographical Information**

The Company operates in a single reportable operating segment, being the exploration and development of mineral properties. The Company's long-lived assets are geographically distributed as shown in the following table. The Company did not have revenues from external customers in any of the periods shown below.

	December 31, 2013		December 31, 2012		December 31, 2011		May 31, 2011	
Canada:	\$	11,994	\$	14,317	\$	22,880	\$	21,961
United States:		55,259,960		55,248,961		53,147,972		5,457,840
Total:	\$	55,271,954	\$	55,263,278	\$	53,170,852	\$	5,479,801

**Competition**

ITH is an exploration stage company. The Company competes with other mineral resource exploration and development companies for financing, technical expertise and the acquisition of mineral properties. Many of the companies with whom the Company competes have greater financial and technical resources. Accordingly, these competitors may be able to spend greater amounts on the acquisition, exploration and development of mineral properties. This competition could adversely impact the Company's ability to finance further exploration and to achieve the financing necessary for the Company to develop its mineral properties.

**Availability of Raw Materials and Skilled Employees**

All aspects of the Company's business require specialized skills and knowledge. Such skills and knowledge include the areas of geology, drilling, logistical planning, preparation of feasibility studies, permitting, construction and operation of a mine, financing and accounting. Since commencing its current operations in mid-2006, the Company has found and retained appropriate employees and consultants and believes it will continue to be able to do so.

All of the raw materials the Company requires to carry on its business are readily available through normal supply or business contracting channels in Canada and the United States. Since commencing exploration activities at the Livengood Gold Project in mid-2006, the Company has been able to secure the appropriate personnel, equipment and supplies required to conduct its contemplated programs. While it has experienced difficulty in procuring some equipment, such as drill equipment or services, experienced drillers and timely assay laboratory services in previous years, the recent overall slowdown in the mineral exploration business has resulted in more equipment and services being made available on a timely basis. As a result, the Company does not believe that it will experience any shortages of required personnel, equipment or supplies in the foreseeable future.

Table of Contents

**Employees**

At December 31, 2013, the Company had 18 full-time employees. The Company also uses consultants with specific skills to assist with various aspects of project evaluation, engineering and corporate governance.

**Seasonality**

As the Company's mineral exploration activity takes place in Alaska, its business is seasonal. Due to the northern climate, exploration work on the Livengood Gold Project can be limited due to excessive snow cover and cold temperatures. In general, surface sampling work is limited to May through September and surface drilling from March through November, although some locations afford opportunities for year-round exploration operations and others, such as road-accessible wetland areas, may only be explored while frozen in the winter.

**Available Information**

ITH maintains an internet website at [www.ithmines.com](http://www.ithmines.com). The Company makes available, free of charge, through the Investors section of its website, its Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and all amendments to those reports filed or furnished pursuant to Section 13(a) or 15(d) of the Exchange Act, as soon as reasonably practicable after such material is electronically filed with, or furnished to, the SEC and its Annual Information Form, press releases and material change reports and other reports filed on the System for Electronic Document Analysis and Retrieval (SEDAR). The Company's SEC filings are available from the SEC's internet website at [www.sec.gov](http://www.sec.gov) which contains reports, proxy and information statements and other information regarding issuers that file electronically. These reports, proxy statements and other information may also be inspected and copied at the SEC's Public Reference Room at 100 F Street, NE, Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 for further information on the operation of the Public Reference Room. The Company's SEDAR filings are available from SEDAR's internet website at [www.sedar.com](http://www.sedar.com) under the Company's profile. The contents of these websites are not incorporated into this report and the references to the URLs for these websites are intended to be inactive textual references only.

**ITEM 1A. RISK FACTORS**

*You should carefully consider the following risk factors in addition to the other information included in this Annual Report on Form 10-K. Each of these risk factors could adversely affect our business, operating results and financial condition, as well as adversely affect the value of an investment in our common shares. The risks described below are not the only ones facing the Company. Additional risks that we are not presently aware of, or that we currently believe are immaterial, may also adversely affect our business, operating results and financial condition. We cannot assure you that we will successfully address these risks or that other unknown risks exist that may affect our business.*

**Risks Related to Our Business**

*Our success depends on the development and operation of the Livengood Gold Project, which is our only project and which, as contemplated in the September 4, 2013 Feasibility Study, is not commercially viable at current gold prices.*

Our only property at this time is our Livengood Gold Project, which is in the exploration stage. We have issued a Feasibility Study on the Livengood Gold Project which indicates that the Project generates a minimal positive return at a gold price of \$1,500 per ounce. The price of gold is \$1,344 per ounce as of March 10, 2014, and the Project as contemplated in the Feasibility Study is not commercially viable at current gold prices. While management is exploring opportunities identified in the Feasibility Study, as well as those developed by the Company subsequent to the Feasibility Study, for optimization and reducing Project costs, there can be no assurance that any such efforts will be successful or that the price of gold will increase sufficiently to warrant a decision to develop the Project. For other risks related to the Project, please see Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, under Livengood Gold Project Feasibility Study Results - Project Execution Risks. If the Project is not developed, or if the Project is otherwise subject to deterioration, destruction or significant delay, we may never generate revenues and our shareholders may lose most

Table of Contents

or all of their investment in our common shares.

***We have a history of losses and expect to continue to incur losses in the future.***

We have incurred losses and have had no revenue from operations since inception, and we expect to continue to incur losses in the future. We have not commenced commercial production on the Livengood Gold Project and we have no other mineral properties. We have no revenues from operations, and we anticipate we will have no operating revenues and will continue to incur operating losses until such time as we place the Livengood Gold Project into production and such project generates sufficient revenues to fund continuing operations. The Livengood Gold Project is currently in the exploration stage. The Project, as contemplated in the Feasibility Study, is not commercially viable at current gold prices. Our activities may not result in profitable mining operations and we may not succeed in establishing mining operations or profitably producing metals at the Livengood Gold Project.

***We are an exploration stage company and have no history producing metals from our properties. Any future revenues and profits are uncertain.***

We have no history of mining or refining any mineral products or metals and the Livengood Gold Project is not currently producing. There can be no assurance that the Livengood Gold Project will be successfully placed into production, produce minerals in commercial quantities or otherwise generate operating earnings. Advancing properties from the exploration stage into development and commercial production requires significant capital and time and will be subject to further feasibility studies, permitting requirements and construction of the mine, processing plants, roads and related works and infrastructure. We will continue to incur losses until our mining activities successfully reach commercial production levels and generate sufficient revenue to fund continuing operations. There is no certainty that we will produce revenue from any source, operate profitably or provide a return on investment in the future. If we are unable to generate revenues or profits, our shareholders might not be able to realize returns on their investment in our common shares.

***We will require additional financing to fund exploration and, if warranted, development and production. Failure to obtain additional financing could have a material adverse effect on our financial condition and results of operation and could cast uncertainty on our ability to continue as a going concern.***

Advancing properties from exploration into the development stage requires significant capital and time, and successful commercial production from a property, if any, will be subject to completing feasibility studies, permitting and construction of the mine, processing plants, roads, and other related works and infrastructure. The Company does not presently have sufficient financial resources or a source of operating cash flow to undertake by itself to complete the permitting process and, if a production decision is made, the construction of a mine at the Livengood Gold Project. The completion of the permitting process, and any construction of a mine at the Livengood Gold Project following the making of a production decision, will therefore depend upon the Company's ability to obtain financing through the sale of its equity securities, enter into a joint venture relationship, secure significant debt financing or find alternative means of financing. There is no assurance that the Company will be successful in obtaining the required financing on favorable terms or at all. Even if the results of exploration are encouraging, the Company may not be able to obtain sufficient financing to conduct the further exploration that may be necessary to determine whether or not a commercially mineable deposit exists.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

Our ability to obtain additional financing in the future will depend upon a number of factors, including prevailing capital market conditions, the status of the national and worldwide economy, our business performance and the price of gold and other precious metals. Capital markets worldwide have been adversely affected in recent years by substantial losses by financial institutions. Failure to obtain such additional financing on favorable terms or at all could result in delay or indefinite postponement of further mining operations or exploration and development and the possible partial or total loss of our interests in the Livengood Gold Project.

*We have not yet identified, and may never identify, commercially viable reserves that would generate revenues.*

We are considered an exploration stage company and will continue to be until we identify commercially viable reserves on our properties and develop our properties. We have no producing properties and have never generated

Table of Contents

any revenue from our operations. We have issued a Feasibility Study on the Livengood Gold Project. Using the trailing three year gold price of \$1,500 per ounce, the Project generates a minimal positive return; however, the Project is not commercially viable at current gold prices. The majority of exploration projects do not result in the discovery of commercially mineable deposits of ore. Further exploration and substantial expenditures are required to establish ore reserves through drilling and metallurgical and other testing techniques, determine metal content and metallurgical recovery processes to extract metal from the ore, and construct, renovate or expand mining and processing facilities. No assurance can be given that any level of recovery of ore reserves will be realized or that any identified mineral deposit will ever qualify as a commercial mineable ore body which can be legally and economically exploited. If we are not able to identify commercially viable mineral deposits or profitably extract minerals from such deposits, our business would be materially adversely affected and our shareholders could lose all or a substantial portion of their investment.

*Resource exploration is a highly speculative business, and certain inherent exploration risks could have a negative effect on our business.*

Our long-term success depends on our ability to identify mineral deposits on the Livengood Gold Project and other properties we may acquire, if any, that can then be developed into commercially viable mining operations. Resource exploration is a highly speculative business and involves a high degree of risk, including, among other things, unprofitable efforts resulting both from the failure to discover mineral deposits and from finding mineral deposits which, though present, are insufficient in size and grade at the then prevailing market conditions to return a profit from production. Substantial expenditures are required to establish proven and probable mineral reserves through drilling and analysis, to develop metallurgical processes to extract metal, and to develop the mining and processing facilities and infrastructure at any site chosen for mining. Although substantial benefits may be derived from the discovery of a major mineralized deposit, no assurance can be given that minerals will be discovered in sufficient quantities to justify commercial operations or that funds required for development can be obtained on a timely basis. The marketability of minerals which may be acquired or discovered by the Company will be affected by numerous factors beyond the control of the Company and cannot be accurately predicted. These factors include market fluctuations, the proximity and capacity of milling facilities, mineral markets and processing equipment, and government regulations, including regulations relating to prices, taxes, royalties, land use, importing and exporting of minerals and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital.

*Mineral resource estimates are based on interpretation and assumptions and could be inaccurate or yield less mineral production under actual conditions than is currently estimated. Any material changes in these estimates will affect the economic viability of placing a property into production.*

The mineral resource estimates included in our reports are estimates only and no assurance can be given that any particular level of recovery of minerals will in fact be realized or that an identified reserve or resource will ever qualify as a commercially mineable (or viable) deposit which can be legally and economically exploited. The estimating of mineral resources and mineral reserves is a subjective process and the accuracy of mineral resource and mineral reserve estimates is a function of the quantity and quality of available data, the accuracy of statistical computations, and the assumptions used and judgments made in interpreting available engineering and geological information. There is significant uncertainty in any mineral resource or mineral reserve estimate and the actual deposits encountered and the economic viability of a deposit may differ materially from the Company's estimates. In addition, the grade of mineralization ultimately mined may differ from that indicated by drilling results and such differences could be material. Because we have not commenced actual production, mineralization estimates, including mineral resource estimates, for the Livengood Gold Project may require adjustments or downward revisions.

Until ore is actually mined and processed, mineral resources, mineral reserves and grades of mineralization must be considered as estimates only. The grade of ore ultimately mined, if any, may differ from that indicated by any pre-feasibility or definitive feasibility studies and drill

results. There can be no assurance that minerals recovered in small scale laboratory tests will be duplicated in large scale tests under on-site conditions or in production scale operations. Extended declines in market prices for gold may render portions or all of our mineral resources uneconomic and result in reduced reported mineralization or adversely affect the commercial viability determinations reached by us. Material changes in estimates of mineralization, grades, stripping ratios, recovery

Table of Contents

rates or of our ability to extract such mineralization may affect the economic viability of projects and the value of our Livengood Gold Project. The estimated resources described in our reports should not be interpreted as assurances of mine life or of the profitability of future operations. Estimated mineral resources and mineral reserves may have to be re-estimated based on changes in applicable commodity prices, further exploration or development activity or actual production experience. This could materially and adversely affect estimates of the volume or grade of mineralization, estimated recovery rates or other important factors that influence mineral resource or mineral reserve estimates. Market price fluctuations for gold, silver or base metals, increased production costs or reduced recovery rates or other factors may render any particular reserves uneconomical or unprofitable to develop at a particular site or sites. A reduction in estimated reserves could require material write downs in investment in the affected mining property and increased amortization, reclamation and closure charges. Mineral resources are not mineral reserves and there is no assurance that any mineral resources will ultimately be reclassified as proven or probable reserves. Mineral resources which are not mineral reserves do not have demonstrated economic viability.

***There are differences in U.S. and Canadian practices for reporting reserves and resources.***

Our reserve and resource estimates are not directly comparable to those made in filings subject to SEC reporting and disclosure requirements, as we generally report reserves and resources in accordance with Canadian practices. These practices are different from the practices used to report reserve and resource estimates in reports and other materials filed with the SEC. It is Canadian practice to report measured, indicated and inferred mineral resources (and in certain circumstances, deposits that are not measured, indicated or inferred mineral resources but that are targeted for further exploration), which are generally not permitted in disclosure filed with the SEC by U.S. issuers. In the United States, mineralization may not be classified as a reserve unless the determination has been made that the mineralization could be economically and legally produced or extracted at the time the reserve determination is made. U.S. investors are cautioned not to assume that all or any part of measured, indicated or inferred mineral resources will ever be converted into reserves.

Further, inferred mineral resources have a great amount of uncertainty as to their existence and as to whether they can be mined legally or economically. Disclosure of contained ounces is permitted disclosure under Canadian regulations; however, the SEC only permits issuers to report resources as in place, tonnage and grade without reference to unit measures.

Accordingly, information concerning descriptions of mineralization, reserves and resources contained in our reports may not be comparable to information made public by U.S. companies subject to the reporting and disclosure requirements of the SEC.

***Increased costs could affect our ability to bring our projects into production and, once in production, our financial condition and ability to be profitable.***

Management anticipates that costs at the Livengood Gold Project will frequently be subject to variation from one year to the next due to a number of factors, such as changing ore grade, metallurgy and revisions to mine plans, if any, in response to the physical shape and location of the ore body. In addition, costs are affected by the price of commodities such as fuel, rubber and electricity. Such commodities are at times subject to volatile price movements, including increases that could make production less profitable or not profitable at all. A material increase in costs could also impact our ability to maintain operations and have a significant effect on the Company's profitability.

*The volatility of the price of gold could adversely affect our future operations and, if warranted, our ability to develop our properties.*

Even if commercial quantities of mineral deposits are discovered by the Company, there is no guarantee that a profitable market will exist for the sale of the metals produced, if any. The Company's long-term viability and profitability, the value of the Company's properties, the market price of its common shares and the Company's ability to raise funding to conduct continued exploration and development, if warranted, depend, in large part, upon the market price of gold. The decision to put a mine into production and to commit the funds necessary for that purpose must be made long before the first revenue from production would be received. A decrease in the price of gold may prevent the Company's property from being economically mined or result in the write-off of assets whose value is impaired as a result of lower gold prices.

Table of Contents

The price of gold has experienced significant movement over short periods of time, and is affected by numerous factors beyond the control of the Company, including economic and political conditions, expectations of inflation, currency exchange fluctuations, interest rates, global or regional demand, sale or purchase of gold by various central banks and financial institutions, speculative activities and increased production due to improved mining and production methods. The volatility of mineral prices represents a substantial risk which no amount of planning or technical expertise can fully eliminate. There can be no assurance that the price of gold will be such that any such deposits can be mined at a profit.

The volatility in gold prices is illustrated by the following table, which presents the high, low and average fixed price in U.S. dollars for an ounce of gold, based on the London Bullion Market Association P.M. fix, over the past five years:

		<b>High</b>		<b>Low</b>		<b>Average</b>
2009	\$	1,213	\$	810	\$	972
2010	\$	1,421	\$	1,058	\$	1,225
2011	\$	1,895	\$	1,319	\$	1,572
2012	\$	1,792	\$	1,540	\$	1,669
2013	\$	1,694	\$	1,192	\$	1,410
January 1, 2014 to March 10, 2014	\$	1,350	\$	1,221	\$	1,280

*Our results of operations could be affected by currency fluctuations.*

The Livengood Gold Project is located in the United States, with most costs associated with the Project paid in US dollars, and the Company maintains its accounts in Canadian and US dollars, making it subject to foreign currency fluctuations. There can be significant swings in the exchange rate between the US and Canadian dollar. There are no plans at this time to hedge against any exchange rate fluctuations in currencies. Adverse foreign currency fluctuations may cause losses and materially affect the Company's financial position and results.

*Resource exploration, development and production involve a high degree of risk and we do not maintain insurance with respect to certain of these risks, which exposes us to significant risk of loss.*

Resource exploration, development and production involve a high degree of risk. Our operations are, and any future development or mining operations we may conduct will be, subject to all of the operating hazards and risks normally incident to exploring for and development of mineral properties, such as, but not limited to:

- economically insufficient mineralized material;
- fluctuation in exploration, development and production costs;

- labor disputes;
- unanticipated variations in grade and other geologic problems;
- water conditions;
- difficult surface or underground conditions;
- mechanical and equipment failure;
- failure of pit walls or dams;
- environmental hazards;
- industrial accidents;
- metallurgical and other processing problems;
- unusual or unexpected rock formations;
- personal injury, cave-ins, landslides, flooding, fire, explosions, and rock-bursts;

Table of Contents

- metal losses;
- power outages;
- periodic interruptions due to inclement or hazardous weather conditions; and
- decrease in the value of mineralized material due to lower gold prices.

These risks could result in damage to, or destruction of, mineral properties, facilities or other property, personal injury, environmental damage, delays in operations, increased cost of operations, monetary losses and possible legal liability. Although the Company maintains or can be expected to maintain insurance within ranges of coverage consistent with industry practice, no assurance can be given that the Company will be able to obtain insurance to cover all of these risks at economically feasible premiums or at all. The Company may elect not to insure where premium costs are disproportionate to the Company's perception of the relevant risks. The payment of such insurance premiums and of such liabilities would reduce the funds available for exploration and production activities, if warranted. Should events such as these that are not covered by insurance arise, they could reduce or eliminate our assets and shareholder equity as well as result in increased costs and a decline in the value of our assets or common shares.

***We may not be able to obtain all required permits and licenses to place any of our properties into production.***

The current and future operations of the Company require licenses and permits from various governmental authorities. There can be no assurance that the Company will be able to obtain all necessary licenses and permits that may be required to carry out exploration, development and mining operations at its projects, on reasonable terms or at all. Costs related to applying for and obtaining permits and licenses may be prohibitive and could delay our planned exploration and development activities. Failure to comply with permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. Delays in obtaining, or a failure to obtain, any such licenses and permits, or a failure to comply with the terms of any such licenses and permits that the Company does obtain, could delay or prevent production of the Livengood Gold Project and have a material adverse effect on the Company.

***Title to the Livengood Gold Project may be subject to defects in title or other claims, which could affect our property rights and claims.***

There are risks that title to the Livengood Gold Project may be challenged or impugned. The Livengood Gold Project is located in the State of Alaska and may be subject to prior unrecorded agreements or transfers or native land claims, and title may be affected by undetected defects. There may be valid challenges to the title of the Livengood Gold Project which, if successful, could impair development or operations. This is particularly the case in respect of those portions of our properties in which we hold our interest solely through a lease with the claim holders, as

such interest is substantially based on contract and has been subject to a number of assignments (as opposed to a direct interest in the property).

Some of the mining claims at the Livengood Gold Project are U.S. federal or Alaska state unpatented mining claims. There is a risk that a portion of such unpatented mining claims could be determined to be invalid, in which case the Company could lose the right to mine any minerals contained within those mining claims. Unpatented mining claims are created and maintained in accordance with the applicable U.S. federal and Alaska state mining laws. Unpatented mining claims are unique property interests and are generally considered to be subject to greater title risk than other real property interests due to the validity of unpatented mining claims often being uncertain. This uncertainty arises, in part, out of the complex federal and state laws and regulations under the provisions of the U.S. *General Mining Law of 1872* (the Mining Law). Unpatented mining claims are always subject to possible challenges of third parties or validity contests by the United States federal government or the Alaska state government, as applicable. The validity of an unpatented mining claim, in terms of both its location and its maintenance, is dependent on strict compliance with a complex body of federal and state statutory and decisional law. Title to the unpatented mining claims may also be affected by undetected defects such as unregistered agreements or transfers and there are few public records that definitively determine the issues of validity and ownership of unpatented mining claims. The Company has not obtained full title opinions for the majority of its

Table of Contents

mineral properties. Not all the mineral properties in which the Company has an interest have been surveyed, and their actual extent and location may be in doubt. Should the federal government impose a royalty or additional tax burdens on the properties that lie within public lands, the resulting mining operations could be seriously impacted, depending upon the type and amount of the burden.

The leases and agreements pursuant to which the Company has interests, or the right to acquire interests, in a significant portion of the Livengood Gold Project provide that the Company must make a series of cash payments over certain time periods or expend certain minimum amounts on the exploration of the properties. Failure by the Company to make such payments or make such expenditures in a timely fashion may result in the Company losing its interest in such properties. There can be no assurance that the Company will have, or be able to obtain, the necessary financial resources to be able to maintain all of its property agreements in good standing, or to be able to comply with all of its obligations thereunder, which could result in the Company forfeiting its interest in one or more of its mineral properties.

***The Company may not have and may not be able to obtain surface or access rights to all or a portion of the Livengood Gold Project.***

Although the Company acquires the rights to some or all of the minerals in the ground subject to the mineral tenures that it acquires, or has a right to acquire, in most cases it does not thereby acquire any rights to, or ownership of, the surface to the areas covered by its mineral tenures. In such cases, applicable mining laws usually provide for rights of access to the surface for the purpose of carrying on mining activities, however, the enforcement of such rights through the courts can be costly and time consuming. It is necessary to negotiate surface access or to purchase the surface rights if long-term access is required. There can be no guarantee that, despite having the right at law to access the surface and carry on mining activities, the Company will be able to negotiate satisfactory agreements with any such existing landowners/occupiers for such access or purchase such surface rights, and therefore it may be unable to carry out planned exploration or mining activities. In addition, in circumstances where such access is denied, or no agreement can be reached, the Company may need to rely on the assistance of local officials or the courts in such jurisdiction the outcomes of which cannot be predicted with any certainty. The inability of the Company to secure surface access or purchase required surface rights could materially and adversely affect the timing, cost or overall ability of the Company to develop any mineral deposits it may locate.

***Our properties and operations may be subject to litigation or other claims.***

From time to time our properties or operations may be subject to disputes which may result in litigation or other legal claims. We may be required to assert or defend against these claims which will divert resources and management time from operations. The costs of these claims or adverse filings may have a material effect on our business and results of operations.

***We are subject to significant governmental regulations which affect our operations and costs of conducting our business.***

Any exploration activities carried on by the Company are, and any future development or mining operations we may conduct will be, subject to extensive laws and regulations governing various matters, including:

Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

- mineral concession acquisition, exploration, development, mining and production;
- management of natural resources;
- exports, price controls, taxes and fees;
- labor standards on occupational health and safety, including mine safety;
- post-closure reclamation;
- environmental standards, waste disposal, toxic substances, explosives, land use and environmental protection; and
- dealings with indigenous peoples and historic and cultural preservation.

Table of Contents

Companies engaged in exploration activities often experience increased costs and delays in production and other schedules as a result of the need to comply with applicable laws, regulations and permits. Failure to comply with applicable laws, regulations and permits may result in civil or criminal fines or penalties, enforcement actions thereunder, including the forfeiture of claims, orders issued by regulatory or judicial authorities requiring operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment or costly remedial actions, any of which could result in the Company incurring significant expenditures. The Company may also be required to compensate third parties suffering loss or damage as a result of our mineral exploration activities and may have civil or criminal fines or penalties imposed for violations of such laws, regulations and permits.

It is also possible that future laws and regulations could cause additional expense, capital expenditures, restrictions on or suspension of the Company's operations and delays in the exploration and development of the Company's property.

***Legislation has been proposed that would significantly affect the mining industry and our business.***

In recent years, members of the United States Congress have repeatedly introduced bills which would supplant or alter the provisions of the Mining Law. If adopted, such legislation, among other things, could eliminate or greatly limit the right to a mineral patent, impose federal royalties on mineral production from unpatented mining claims located on United States federal lands (which includes certain of the mining claims at the Livengood Gold Project), result in the denial of permits to mine after the expenditure of significant funds for exploration and development, reduce estimates of mineral reserves and reduce the amount of future exploration and development activity on U.S. federal lands, all of which could have a material and adverse effect on the Company's ability to operate and its cash flow, results of operations and financial condition.

***Our activities are subject to environmental laws and regulations that may increase our costs of doing business and restrict our operations.***

The activities of the Company are subject to environmental regulations in the jurisdictions in which we operate. Environmental legislation generally provides for restrictions and prohibitions on spills, releases or emissions into the air, discharges into water, management of waste, management of hazardous substances, protection of natural resources, antiquities and endangered species and reclamation of lands disturbed by mining operations. Certain types of operations require the submission and approval of environmental impact assessments. Environmental legislation is evolving in a manner involving stricter standards and enforcement, increased fines and penalties for non-compliance, more stringent environmental assessments of proposed projects and a heightened degree of responsibility for companies and their officers, directors and employees. Compliance with environmental laws and regulations and future changes in these laws and regulations may require significant capital outlays, cause material changes or delays in our current and planned operations and future activities and reduce the profitability of operations. It is possible that future changes in these laws or regulations could have a significant adverse impact on our Livengood Gold Project or some portion of our business, causing us to re-evaluate those activities at that time.

Examples of current U.S. federal laws which may affect our current operations and may impact future business and operations include, but are not limited to, the following:

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

The Comprehensive Environmental, Response, Compensation, and Liability Act ( CERCLA ), and comparable state statutes, impose strict, joint and several liability on current and former owners and operators of sites and on persons who disposed of or arranged for the disposal of hazardous substances found at such sites. It is not uncommon for the government to file claims requiring cleanup actions, demands for reimbursement for government-incurred cleanup costs, or natural resource damages, or for neighboring landowners and other third parties to file claims for personal injury and property damage allegedly caused by hazardous substances released into the environment. The Federal Resource Conservation and Recovery Act ( RCRA ), and comparable state statutes, govern the disposal of solid waste and hazardous waste and authorize the imposition of substantial fines and penalties for noncompliance, as well as requirements for corrective actions. CERCLA, RCRA and comparable state statutes can impose liability for clean-up of sites and disposal of substances found on exploration, mining and processing sites long after activities on such sites have been completed.

Table of Contents

The Clean Air Act ( CAA ) restricts the emission of air pollutants from many sources, including mining and processing activities. Our mining operations may produce air emissions, including fugitive dust and other air pollutants from stationary equipment, storage facilities and the use of mobile sources such as trucks and heavy construction equipment, which are subject to review, monitoring or control requirements under the CAA and state air quality laws. New facilities may be required to obtain permits before work can begin, and existing facilities may be required to incur capital costs in order to remain in compliance. In addition, permitting rules may impose limitations on our production levels or result in additional capital expenditures in order to comply with the regulations.

The National Environmental Policy Act ( NEPA ) requires federal agencies to integrate environmental considerations into their decision-making processes by evaluating the environmental impacts of their proposed actions, including issuance of permits to mining facilities, and assessing alternatives to those actions. If a proposed action could significantly affect the environment, the agency must prepare a detailed statement known as an Environmental Impact Statement ( EIS ). The U.S. Environmental Protection Agency ( EPA ), other federal agencies, and any interested third parties will review and comment on the scoping of the EIS and the adequacy of and findings set forth in the draft and final EIS. We are required to undertake the NEPA process for the Livengood Gold Project permitting. The NEPA process can cause delays in issuance of required permits or result in changes to a project to mitigate its potential environmental impacts, which can in turn impact the economic feasibility of a proposed project or the ability to construct or operate the Livengood Gold Project or other properties entirely.

The Clean Water Act ( CWA ), and comparable state statutes, impose restrictions and controls on the discharge of pollutants into waters of the United States. The discharge of pollutants into regulated waters is prohibited, except in accordance with the terms of a permit issued by the EPA or an analogous state agency. The CWA regulates storm water mining facilities and requires a storm water discharge permit for certain activities. Such a permit requires the regulated facility to monitor and sample storm water run-off from its operations. The CWA and regulations implemented thereunder also prohibit discharges of dredged and fill material in wetlands and other waters of the United States unless authorized by an appropriately issued permit. The CWA and comparable state statutes provide for civil, criminal and administrative penalties for unauthorized discharges of pollutants and impose liability on parties responsible for those discharges for the costs of cleaning up any environmental damage caused by the release and for natural resource damages resulting from the release.

The Safe Drinking Water Act ( SDWA ) and the Underground Injection Control ( UIC ) program promulgated thereunder, regulate the drilling and operation of subsurface injection wells. The EPA directly administers the UIC program in some states and in others the responsibility for the program has been delegated to the state. The program requires that a permit be obtained before drilling a disposal or injection well. Violation of these regulations or contamination of groundwater by mining related activities may result in fines, penalties, and remediation costs, among other sanctions and liabilities under the SDWA and state laws. In addition, third party claims may be filed by landowners and other parties claiming damages for alternative water supplies, property damages, and bodily injury.

***Regulations and pending legislation governing issues involving climate change could result in increased operating costs, which could have a material adverse effect on our business.***

A number of governments or governmental bodies have introduced or are contemplating regulatory changes in response to various climate change interest groups and the potential impact of climate change. Legislation and increased regulation regarding climate change could impose significant costs on us, our future partners and our suppliers, including costs related to increased energy requirements, capital equipment, environmental monitoring and reporting and other costs to comply with such regulations. Any adopted future climate change regulations could also negatively impact our ability to compete with companies situated in areas not subject to such limitations. Given the emotion, political significance and uncertainty around the impact of climate change and how it should be dealt with, we cannot predict how legislation and regulation will affect our financial condition, operating performance and ability to compete. Furthermore, even without such regulation, increased awareness and any adverse publicity in the global marketplace about potential impacts on climate change by us or other companies in our industry could harm our reputation. The potential physical impacts of climate change on our operations are highly uncertain and would be

particular to the geographic circumstances in areas in which we operate. These may include changes in rainfall and storm patterns and intensities, water shortages, changing sea levels and changing temperatures. These impacts may adversely impact the cost, production and financial performance of our operations.

Table of Contents

***Land reclamation requirements for our properties may be burdensome and expensive in the future.***

Land reclamation requirements are generally imposed on mineral exploration companies (as well as companies with mining operations) in order to minimize long term effects of land disturbance.

Reclamation may include requirements to:

- control dispersion of potentially deleterious effluents;
- treat ground and surface water to drinking water standards; and
- reasonably re-establish pre-disturbance land forms and vegetation.

In order to carry out reclamation obligations imposed on us in connection with the potential development activities at the Livengood Gold Project, we must allocate financial resources that might otherwise be spent on further exploration and development programs. We plan to set up a provision for reclamation obligations on the Livengood Gold Project, as appropriate, but this provision may not be adequate. If we are required to carry out unanticipated reclamation work, our financial position could be adversely affected.

***The mining industry is intensely competitive, and we have limited financial and personnel resources with which to compete.***

The Company's business of the acquisition, exploration and development, if warranted, of mineral properties is intensely competitive. The Company may be at a competitive disadvantage in acquiring additional mining properties because it must compete with other individuals and companies, many of which may have greater financial resources, operational experience and technical capabilities than the Company. The Company may also encounter increasing competition from other mining companies in efforts to hire experienced mining professionals. Increased competition could adversely affect the Company's ability to attract necessary capital funding, acquire suitable producing properties or prospects for mineral exploration in the future, or attract or retain key personnel or outside technical resources.

***A shortage of equipment and supplies could adversely affect our ability to operate our business.***

We are dependent on various supplies and equipment to carry out our exploration and, if warranted, development and mining operations. The shortage of such supplies, equipment and parts could have a material adverse effect on our ability to carry out our operations and therefore limit or increase the cost of production.

*We are dependent on key personnel and the absence of any of these individuals could adversely affect our business. We may experience difficulty attracting and retaining qualified personnel.*

Our success is largely dependent on the performance and abilities of our directors, officers, employees and management and on our ability to attract and retain additional key personnel in exploration, mine development, sales, marketing, technical support and finance. In addition, the Company has relied and may continue to rely upon consultants and others for operating expertise. There is no assurance that we will be able to maintain the services of our directors, officers, employees or other qualified personnel required to operate our business. The loss of the services of these persons could have a material adverse effect on our business and prospects. Recruiting and retaining qualified personnel is critical to our success and there can be no assurance we will be able to recruit and retain such personnel. The number of persons skilled in the acquisition, exploration and development of mineral properties is limited and competition for such persons is intense. If we are not successful in attracting and retaining qualified personnel, our ability to develop our properties could be affected, which could have a material adverse effect on our business, results of operations, cash flows and financial condition. We do not maintain key man life insurance policies on any of our officers or employees.

Table of Contents

*Canadian investors may not be able to enforce their civil liabilities against us.*

It may be difficult for Canadian investors to bring and enforce suits against us. As substantially all of the assets of the Company and its subsidiaries are located outside of Canada, and certain of the directors and officers of the Company are resident outside of Canada, it may be difficult or impossible for Canadian investors to enforce judgments granted by a court in Canada against the assets of the Company or the directors and officers of the Company residing outside of Canada. A shareholder should not assume that the courts of the United States (i) would enforce judgments of Canadian courts obtained in actions against us or such persons predicated upon the civil liability provisions of the Canadian securities laws or other laws of Canada, or (ii) would enforce, in original actions, liabilities against us or such persons predicated upon Canadian securities laws or other laws of Canada.

**Risks Related to Our Common Shares**

*Our share price may be volatile and as a result you could lose all or part of your investment.*

In recent years, the securities markets in the United States and Canada have experienced a high level of price and volume volatility, and the market price of securities of many companies, particularly those considered exploration or development stage companies, have experienced wide fluctuations in price which have not necessarily been related to the operating performance, underlying asset values or prospects of such companies. It may be anticipated that any quoted market for our common shares will be subject to market trends and conditions generally, notwithstanding any potential success we have in creating revenues, cash flows or earnings. The price of our common shares has been subject to price and volume volatility in the past. In 2013, the price of our common shares on the Toronto Stock Exchange ranged from a low of C\$0.31 to a high of C\$2.48, and on the NYSE MKT ranged from a low of \$0.30 to a high of \$2.49. From January 1, 2014 to March 10, 2014, the price of our common shares on the TSX ranged from a low of C\$0.43 to a high of C\$1.14, and on the NYSE MKT ranged from a low of \$0.40 to a high of \$1.03. There can be no assurance that significant fluctuations in the trading price of the Company's common shares will not continue to occur, or that such fluctuations will not materially adversely impact the Company's ability to raise equity funding without significant dilution to its existing shareholders, or at all. As a result, you may be unable to resell your shares at a desired price.

*Future sales of our securities in the public or private markets will dilute our current shareholders and could adversely affect the trading price of our common shares and our ability to continue to raise funds in new stock offerings.*

It is likely that the Company will sell common shares or securities exercisable or convertible into common shares in the future. The Company may issue securities on less than favorable terms to raise sufficient capital to fund its business plan. Any transaction involving the issuance of equity securities or securities convertible into common shares would result in dilution, possibly substantial, to present and prospective holders of common shares, could adversely affect the trading prices of our common shares, and could impair our ability to raise capital through future offerings of securities.

*We have never paid dividends on our common shares.*

We have not paid dividends on our common shares to date, and we may not be in a position to pay dividends for the foreseeable future. Our ability to pay dividends will depend on our ability to successfully develop the Livengood Gold Project and generate earnings from operations. Further, our initial earnings, if any, will likely be retained to finance our operations. Any future dividends will depend upon our earnings, our then-existing financial requirements and other factors, and will be at the discretion of our board of directors.

*Our business is subject to evolving corporate governance and public disclosure regulations that have increased both our compliance costs and the risk of noncompliance, which could have an adverse effect on our stock price.*

We are subject to changing rules and regulations promulgated by a number of governmental and self-regulated organizations, including the British Columbia Securities Commission, the SEC, the TSX, the NYSE MKT, and the Financial Accounting Standards Board. These rules and regulations continue to evolve in scope and complexity and

Table of Contents

many new requirements have been created in response to laws enacted by the United States Congress, making compliance more difficult and uncertain. For example, on July 21, 2010, the United States Congress passed the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act ) with increased disclosure obligations for public companies and mining companies in the United States. Our efforts to comply with the Dodd-Frank Act and other new regulations have resulted in, and are likely to continue to result in, increased general and administrative expenses and a diversion of management time and attention from operating activities to compliance activities.

*We likely constituted a passive foreign investment company during the fiscal year ended December 31, 2013, which may result in adverse U.S. federal income tax consequences to U.S. holders.*

We believe that we were a PFIC for U.S. federal income tax purposes during the fiscal year ended December 31, 2013, and we expect that we will be a PFIC in the current year and that we may be a PFIC in future years. The determination of whether or not the Company is a PFIC is a factual determination dependent on a number of factors that cannot be made until the close of the applicable tax year and accordingly no assurances can be given regarding the Company's PFIC status for the current year or any future year. If ITH is a PFIC at any time during a U.S. holder's holding period, then certain potentially adverse tax consequences could apply to such U.S. holder's acquisition, ownership, and disposition of common shares. For more information, please see the discussion in Certain U.S. Federal Income Tax Considerations for U.S. Holders below.

None.

**ITEM 2. PROPERTIES**

**LIVENGOOD GOLD PROJECT, Alaska**

The Company currently holds, or has rights to acquire, ownership or leasehold interests in a group of adjacent mineral properties in Alaska which are collectively referred to as the Livengood Gold Project. The Livengood Gold Project is located approximately 113 km (70 miles) by road northwest of Fairbanks, Alaska and approximately 65 km (40 miles) north of the boundary of the Fairbanks North Star Borough as shown in Figure 1 below. The project lies within the Tolovana Mining District in the northern part of the Tintina Gold Belt. The Company's primary focus is to continue to advance the Livengood Gold Project with the objective of assessing its viability for commercial gold mining.

The Company is in the exploration stage and does not mine, produce or sell any mineral products at this time. The Company controls 100% of the Livengood Gold Project with a mineral resource of 731 million Measured tonnes at an average grade of 0.61 g/tonne (14.4 million ounces at 0.3 g/tonne cut-off), 71 million Indicated tonnes at an average grade of 0.56 g/tonne (1.3 million ounces at 0.3 g/tonne cut-off) and 266 million Inferred tonnes at an average grade of 0.52 g/tonne (4.4 million ounces at 0.3 g/tonne cut-off). On July 23, 2013 the Company issued the results of the Feasibility Study which converted a portion of the Company's mineral resources into proven reserves of 434 million tonnes at an average

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

grade of 0.69 g/tonne (9.6 million ounces) and probable reserves of 20 million tonnes at an average grade of 0.70 g/tonne (454,000 ounces). All work presently planned by the Company is directed at maintaining necessary environmental baseline activities at the Livengood Gold Project and focusing efforts on project optimization opportunities, including those identified in the Feasibility Study and those subsequently developed by the Company.

The Company relies upon consultants and contractors to carry on many of its activities and, in particular, to carry out drilling programs at the Livengood Gold Project and in connection with the preparation of technical reports on the project. However, as ITH expands its activities, it may choose to hire additional employees rather than relying on consultants.

Table of Contents

*Figure 1: Location of the Livengood Gold Project*

**Accessibility, Climate, Local Resources, Infrastructure and Physiography**

The Livengood Gold Project is located approximately 113 km (70 miles) by road northwest of Fairbanks, Alaska in the Tolovana Mining District within the Tintina Gold Belt. The project area is centered on Money Knob, a local topographic high point. This feature and the adjoining ridgelines are the probable lode gold source for the Livengood placer deposits which lie in the adjacent valleys which have been actively mined since 1914 and have produced more than 500,000 ounces of gold.

The Livengood Gold Project straddles and is accessed via the Elliot Highway, a paved, all weather road linking the north slope oil fields at Prudhoe Bay to central and southern Alaska through Fairbanks. At present there are no full time residents in the former mining town of Livengood. A number of unpaved roads have been developed in the area providing excellent access. A 427-meter (1400-foot) runway is located 6 km (3.7 miles) to the southwest near the former Alyeska Pipeline Company Livengood Camp and is suitable for light aircraft. The Livengood Gold Project is also adjacent to the Alyeska Pipeline corridor, which transports crude oil from Prudhoe Bay south. This corridor contains a fiber

optic communications cable utilized at the Livengood Gold Project.

Topography at the site is eroded hills and valleys with a general elevation difference of 200m (656 feet). The valleys generally contain active streams draining into the Tolovana River system to the west.

The site is approximately 65 km (40 miles) south of the Arctic Circle, and has a subarctic climate with long, cold winters and short, warm summers. Annual precipitation is approximately 40 cm (16 inches). Average low temperatures in winter are  $-21^{\circ}$  to  $-28^{\circ}$  Celsius ( $-6^{\circ}$  to  $-18^{\circ}$  Fahrenheit), with records reaching as low as  $-55^{\circ}$  Celsius ( $-67^{\circ}$  Fahrenheit). Exploration work on the Livengood Gold Project can be limited due to excessive snow cover and cold temperatures. In general, surface sampling work is limited to May through September and surface drilling from

Table of Contents

March through November. Road-accessible wetland areas may only be explored while frozen in the winter. Work to date on the site has been limited to exploration and geotechnical drilling and environmental baseline activities. The Company does not have any plant or equipment at the site, relying on contractors to perform the work.

The nearest community to Livengood Gold Project is the village of Minto, a town with a population of 200 located approximately 65 km (40 miles) southwest by road. The Fairbanks metropolitan area has a population of approximately 100,000 people, and comprises the regional center with hospitals, government offices, businesses and the University of Alaska, Fairbanks. The city is linked to southern Alaska along a north-south transportation and utility corridor that includes two paved highways, a railroad to tide water, an interlinked electrical grid, and communications infrastructure. Fairbanks has a regional airport serviced daily by up to three major airlines.

In preliminary, nonbinding discussions, the local utility in Fairbanks (Golden Valley Electrical Association) has indicated that 80-100 Megawatts of power could be available to the Livengood Gold Project. Livengood would be connected to the local grid by building a 82 km (50 miles) 230- kVA line along the pipeline corridor. Environmental baseline studies required for the electrical line construction started in 2011.

The Feasibility Study developed site layout plans for the infrastructure required at the Livengood Gold Project. This included evaluating mine shops; process, water and tailing management facilities; power; access roads; administration offices; and camp facilities.

**Livengood Gold Project Lands**

The Livengood Gold Project covers approximately 19,546 hectares (48,300 acres), all of which is controlled by the Company through its wholly-owned subsidiary, Tower Hill Mines, Inc. The Livengood Gold Project is comprised of multiple land parcels: 100% owned patented mining claims, 100% owned State of Alaska mining claims, 100% owned federal unpatented placer claims; land leased from the Alaska Mental Health Trust ( AMHT ); land leased from holders of state and federal patented and unpatented mining and placer claims, and undivided interests in patented mining claims. The property and claims controlled through ownership, leases or agreements are summarized below.

**100% owned patented mining claims**

- U.S Mineral Survey 2447, located on lower Livengood Creek, subject to the December 2011 land purchase agreement described below and further subject to an agreement to allow Larry Nelson as agent for Heflinger to operate a placer mine on MS 2477 through December 31, 2014.

- U.S. Mineral Survey 1956, located on lower Gertrude Creek, subject to a reserved royalty of 5% of gross value held by Key Trust Company on behalf of the Luther Hess Trust, and further subject to an agreement to allow Mammoth Mining LLC to operate a placer mine on MS 1956 and F61249, F61256, F61257, and F61259 on lower Livengood Creek through December 31, 2015.

- With respect to portions of U.S. Mineral Survey 1626, located on lower Amy Creek:

100% of No. 2 Above Discovery Amy Creek,

100% of No. 3 Above Discovery Amy Creek, and

100% of Up Grade Association Bench

**100% owned State of Alaska mining claims**

- 169 state claims acquired by purchase.

- 157 state claims acquired by location.

**100% owned federal unpatented placer claims**

- 29 federal unpatented placer claims, subject to the December 2011 land purchase agreement described below.

Table of Contents

**100% owned Livengood Placers, Inc.**, a private Nevada corporation that is 100% owned by TH Alaska. Livengood Placers, Inc. is the record owner of the following:

- 29 patented claims, subject to the December 2011 land purchase agreement described below.
- 108 federal unpatented placer claims, subject to the December 2011 land purchase agreement described below.
- 24 State of Alaska mining claims, subject to the December 2011 land purchase agreement described below.

**Leased property**

- Alaska Mental Health Trust Lease. A lease of the AMHT mineral rights having a term commencing July 1, 2004 and extending 19 years until June 30, 2023, subject to further extensions beyond June 30, 2023 by either commercial production or payment of an advance minimum royalty equal to 125% of the amount paid in year 19 and diligent pursuit of development. The lease requires minimum work expenditures and advance minimum royalties which escalate annually with inflation. A net smelter return ( NSR ) production royalty of between 2.5% and 5.0% (depending upon the price of gold) is payable to the lessor with respect to the lands subject to this lease. In addition, an NSR production royalty of 1% is payable to the lessor with respect to the unpatented federal mining claims subject to the lease described in the Hudson/Geraghty Lease below and an NSR production royalty of between 0.5% and 1.0% (depending upon the price of gold) is payable to the lessor with respect to the lands acquired by the Company in December 2011. As of December 31, 2013, there were 9,970 acres included in the AMHT lease.
- Hudson/Geraghty Lease. A lease of 20 federal unpatented federal lode mining claims having an initial term of ten years commencing on April 21, 2003 and continuing for so long thereafter as advance minimum royalties are paid and mining related activities, including exploration, continue on the property or on adjacent properties controlled by the Company. The lease requires an advance minimum royalty of \$50,000 on or before each anniversary date (all of which minimum royalties are recoverable from production royalties). An NSR production royalty of between 2% and 3% (depending on the price of gold) is payable to the lessors. The Company may purchase 1% of the royalty for \$1,000,000.
- Griffin Lease. A lease of three patented lode claims having an initial term of ten years commencing January 18, 2007, and continuing for so long thereafter as advance minimum royalties are paid. The lease requires an advance minimum royalty of \$20,000 on or before each anniversary date through January 18, 2017 and \$25,000 on or before each subsequent anniversary (all of which minimum royalties are recoverable from production royalties). An NSR production royalty of 3% is payable to the lessors. The Company may purchase all interests of the lessors in the leased property (including the production royalty) for \$1,000,000 (less all minimum and production royalties paid to the date of purchase), of which \$500,000 is payable in cash over four years following the closing of the purchase and the balance of \$500,000 is payable by way of the 3% NSR production royalty.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

- Tucker Lease. A lease of two unpatented federal lode mining claims and four federal unpatented placer claims having an initial term of ten years commencing on March 28, 2007, and continuing for so long thereafter as advance minimum royalties are paid and mining related activities, including exploration, continue on the property or on adjacent properties controlled by the Company. The lease requires an advance minimum royalty of \$15,000 on or before each anniversary date (all of which minimum royalties are recoverable from production royalties). The Company is required to pay the lessor the sum

Table of Contents

of \$250,000 upon making a positive production decision, payable \$125,000 within 120 days of the decision and \$125,000 within a year of the decision (all of which are recoverable from production royalties). An NSR production royalty of 2% is payable to the lessor. The Company may purchase all of the interest of the lessor in the leased property (including the production royalty) for \$1,000,000.

**Patented claims (undivided interests less than 100%)**

- An undivided 83.33% interest in that certain patented placer mining claim known as the Kinney Bench claim, included within U.S. Mineral Survey No. 1626 on lower Amy Creek.
- An undivided 2/9th interest in that certain patented placer mining claim known as the Union Bench Association claim, included within U.S. Mineral Survey No. 1626 on lower Amy Creek.
- An undivided 1/6th interest in that certain patented placer mining claim known as the Bessie Bench claim, included within U.S. Mineral Survey No. 1626 on lower Amy Creek.
- An undivided 1/3rd interest in those certain patented placer mining claims known as the War Association claim; the Mutual Association claim; and the O.K. Fraction claim, all included within U.S. Mineral Survey No. 2033 on lower Amy Creek.

On State of Alaska lands, the state holds both the surface and the subsurface rights. State of Alaska 40-acre mining claims require an annual rental payment of \$35/claim to be paid to the state (by November 30th of each year), for the first five years, \$70 per year for the second five years, and \$170 per year thereafter. These rental rates are multiplied by 4 for each 160 acre claim. As a consequence of the annual rentals due, all Alaska State Mining Claims have an expiry date of November 30th each year. In addition, there is a minimum annual work expenditure requirement of \$100 per 40-acre claim (due on or before noon on September 1 in each year) or cash-in-lieu thereof, and an affidavit evidencing that such work has been performed is required to be filed on or before November 30th in each year. Excess work can be carried forward for up to four years. If the rental is paid and the work requirements are met, the claims can be held indefinitely. The work completed by the Company during the 2013 field season was filed as assessment work, and the value of that work is sufficient to meet the assessment work requirements through September 1, 2017 on all State of Alaska mining claims.

Holders of State of Alaska mining claims are also required to pay a production royalty on all revenue received from minerals produced on state land during each calendar year. The production royalty rate is 3% of net income.

Holders of federal unpatented mining claims are required to pay an annual rental of \$140 per 20 acres.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

All of the foregoing agreements are in good standing and are transferable. The Company has taken reasonable steps to verify title to mineral properties in which it has an interest. Except for the patented claims, none of the properties have been surveyed.

Holders of Federal and Alaska State unpatented mining claims have the right to use the land or water included within mining claims only when necessary for mineral prospecting, development, extraction, or basic processing, or for storage of mining equipment. However, the exercise of such rights is subject to the appropriate permits being obtained.

Table of Contents

**December 2011 Land Purchase Agreement**

In December 2011, the Company completed a transaction to acquire certain mining claims and related rights in the vicinity of the Livengood Gold Project. This acquisition included both mining claims and all of the shares of Livengood Placers, Inc. These assets were purchased on December 13, 2011 for aggregate consideration of \$36,600,000 allocated between cash consideration of \$13,500,000 and a derivative liability of \$23,100,000. The derivative liability is a contingent payment based on the five-year average daily gold price ( Average Gold Price ) from the date of the acquisition. The derivative liability (payable in December 2016) will equal \$23,148 for every dollar that the Average Gold Price exceeds \$720 per troy ounce. If the Average Gold Price is less than \$720, there will be no additional contingent payment. The subject ground was previously vacant or was used for placer gold mining.

No placer mineral reserves or mineral resources have been established on the ground subject to this agreement. However, records exist for 2,370 placer drill holes that have been completed on the subject ground between 1933 and 2011. Of these, the 945 holes completed between 1933 and 1984 were primarily 6 inch churn drill holes. The 1,425 drill holes completed between 1984 and 2000 were 8 inch RC rotary drill holes utilizing a center return tri-cone bit. All lands controlled by the Company, including the lands acquired pursuant to this agreement, were evaluated as appropriate for integration into the Feasibility Study for the Livengood Gold Project.

**Geology and Mineralization**

Rocks at the Livengood Gold Project are part of the Livengood Terrane, an east-west belt, approximately 240 km (149 miles) long, consisting of tectonically interleaved assemblages of various ages. These assemblages include the Amy Creek Assemblage, a sequence of latest Proterozoic and/or early Paleozoic basalt, mudstone, chert, dolomite, and limestone. An early Cambrian ophiolite sequence of mafic and ultramafic sea floor rocks was thrust over the Amy Creek Assemblage and was, in turn, overthrust by a sequence of Devonian shale, siltstone, conglomerate, volcanic, and volcanoclastic rocks, which are the dominant host to the mineralization currently under exploration at the Livengood Gold Project. The Devonian assemblage was overthrust by a second klippe of Cambrian ophiolite rocks. All of these rocks are intruded by Cretaceous multiphase monzonitic and syenitic dikes and sills. Gold mineralization is spatially and temporally associated with these intrusive rocks.

Gold mineralization occurs in association with disseminated arsenopyrite and pyrite in volcanic, sedimentary, and intrusive rocks, and in quartz veins cutting the more competent lithologies, primarily volcanic rocks, sandstones, and, to a lesser degree, ultramafic rocks. Three principal stages of alteration are currently recognized, an early biotite stage, followed by albite-quartz, and a late sericite-quartz assemblage. Carbonate appears to have been introduced with and subsequent to these stages. Arsenopyrite and pyrite were introduced primarily during the albite-quartz and sericite-quartz stages. Gold correlates strongly with arsenic and occurs primarily within and on the margins of arsenopyrite and pyrite.

Mineralization is interpreted as intrusion-related, consistent with other gold deposits of the Tintina Gold Belt, and has a similar As-Sb geochemical association. Mineralization is controlled partly by lithologic units, but thrust-fold architecture was key to providing pathways for intrusive and associated hydrothermal fluids.

Local fault and contact limits to mineralization have been identified, but overall the deposit has not been closed off in any direction. The current resource and area drilled covers the most significant portion of the area with anomalous gold in surface soil samples, but still represents only about 25% of the total gold-anomalous area.

Among deposits of the Tintina Gold Belt, mineralization at the Livengood Gold Project is most similar to the dike and sill-hosted mineralization at the Donlin Creek deposit, where gold occurs in narrow quartz veins associated with dikes and sills of similar composition. The age of the intrusions and the genetic link between the mineralization and intrusive rocks are typical of those of other nearby gold deposits of the Tintina Gold Belt, which have been characterized as intrusion-related gold systems and for these reasons the Livengood Gold Project is best classified with them.

Table of Contents

**History and Exploration**

Gold was first discovered in the gravels of Livengood Creek in 1914. Subsequently, over 500,000 ounces of placer gold were produced and the small town of Livengood was established. From 1914 through the 1970 s, the primary focus of prospecting activity was placer deposits. Historically, prospectors considered Money Knob and the associated ridgeline the source of the placer gold. Prospecting, in the form of dozer trenches, was carried out for lode type mineralization in the vicinity of Money Knob primarily in the 1950 s. However, to date no significant production has been derived from lode gold sources.

The geology and mineral potential of the Livengood District have been investigated by state and federal agencies and explored by several companies over the past 40-plus years. Modern mapping and sampling investigations were initially carried out by the U.S. Geological Survey in 1967 as part of a heavy metal assessment program. Mapping completed in the course of this program recognized the essential rock relations, thrust faulting, and mineralization associated with Devonian clastic rocks, the thrust system and intrusive rocks. Since then, the Livengood placer deposits and the surrounding geology have featured in numerous investigations and mapping programs at various scales by the U.S. Geological Survey and the Alaska State Division of Geological and Geophysical Surveys.

In addition to individuals prospecting the area, since the 1970 s several mining companies, including Homestake, AMAX, Placer Dome, Cambior and AngloGold, have investigated the potential for lode gold mineralization beneath the Livengood placers and on the adjacent hillsides, including at Money Knob. Placer Dome s work appears to have been the most extensive, but it was focused largely on the northern flank of Money Knob and the valley of Livengood Creek.

The most recent round of exploration of the Money Knob area began when AngloGold acquired the property in 2003 and undertook an 8-hole reverse circulation (RC) program on the Hudson-Geraghty lease. The results from this program were encouraging and were followed up with an expanded soil geochemical survey which identified gold-anomalous zones over Money Knob and to the east. Based on the results of this and prior (Cambior) soil surveys, 4 diamond core holes were drilled in late 2004. Results from these two AngloGold drill programs were deemed favorable but no further work was executed due to financial constraints and a shift in corporate strategy.

The Company acquired the Livengood Gold Project in 2006 from AngloGold and has advanced the soil sampling coverage, undertook to drill surface geochemical anomalies and conducted drilling campaigns on the Livengood Gold Project since that time.

In 2006, the Company conducted a 1,227m, seven-hole program and continued to demonstrate the presence of mineralization over a broader area. The 2007 campaign consisted of 15 diamond drill holes for a total of 4,411m. These holes focused on extending and defining the volcanic-hosted mineralization first recognized by AngloGold in 2003. However, as drilling progressed, it became clear that although mineralization is strongest in the volcanic rocks, it occurs in all rock types at Money Knob.

Based on favorable results in 2007, the 2008 program consisted of 29,150m of RC and 2,187m core drilling in 109 and 9 holes, respectively. The drill program was designed to improve definition and expand the resource calculated early in 2008 based on 2007 drill data. The 2008 drill program did not identify limits to mineralization in any direction. Instead, a thicker mineralized zone (up to 200m) was identified. In addition, this campaign highlighted the fact that mineralization occurs in all rock types, not just in Devonian volcanic rocks, indicating potential more widespread mineralization than envisioned prior to the 2008 drill program.

In 2009, the Company completed 12 diamond drill holes totaling 4,572 meters and 195 RC holes totaling 59,757 meters. Six of the diamond drill holes were drilled across the NNW-trending Core Zone in order to better understand the structural controls and to test the depth continuity of the mineralization. This drilling confirmed that the Core Zone is the locus of a swarm of 0.2 - 1.0m thick southerly dipping dikes. In addition, a number of larger (+10m thick) steeply dipping NNW-trending dikes were observed, suggesting that ENE extension may have occurred at about the time of dike magmatism. The RC holes were primarily targeted at grid infill drilling to improve resource estimation of the Core Zone and a step-out program that led to discovery and delineation of the Sunshine and Tower Zones.

Table of Contents

In 2010, the Company completed 40 diamond drill holes totaling 13,631 meters and 198 RC holes totaling 56,550 meters. These holes, filled in between the Core and Sunshine Zones, expanded the SW Zone and infilled to 50 meter spacing in the Core and Sunshine Zones.

Nearly all drill holes at Money Knob have been drilled in a northerly direction at an inclination of -50 degrees (RC) and -60 degrees (core) in order to best intercept the south dipping structures and mineralized zones as close to perpendicular as possible. A few holes have been drilled in other directions to test other features and aspects of mineralization. Most exploration holes have been spaced at 75m apart along lines 75m apart, subsequent infill drilling in the center of 75m squares brings the nominal drill spacing to 50m for a significant portion of the deposit. Core is recovered using triple tube techniques to ensure good recovery (>95%) and confidence in core orientation. RC holes are bored and cased for the upper 0-30m to prevent down hole contamination and to help keep the hole open for ease of drilling at greater depths.

In 2011, the Company continued with resource definition drilling, completing 26,163 meters of RC drilling and 11,468 meters of diamond drilling. Two areas of the deposit, the Core and Sunshine crosses, were selected for 15-meter-spaced reverse circulation (RC) in-fill drilling on crosses with north-south and east-west legs 150 meters in length. A third area, Area 50 in the Sunshine Zone, measuring 195 meters by 240 meters, was drilled on a 37.5-meter grid with alternating core and RC drilling. Two resources were generated for each volume using ordinary kriging on samples composited to 10-meter lengths: the first including those portions of the 50-meter grid drilling within the volume; and a second using both the grid and close-spaced drilling within the same volume. On average, the effect of the increased drilling density on tonnage, grade, and contained ounces of gold was less than 1% and confirmed the integrity of the resource estimate reported in the Livengood Report. In 2011, the Company broadened the scope of the field program to include 2,240 meters of exploration drilling outside the resource area, as well as 8,932 meters of geotechnical drilling and 1,192 meters of large diameter groundwater test wells.

In May 2012, the Company commenced an 18-hole program of condemnation drilling to either sterilize or establish the presence of significant mineralization in the area surrounding the Money Knob deposit. The purpose of the condemnation drilling program was to determine appropriate areas for infrastructure development. Additionally, four of these holes are also being used for hydrological studies. The program was completed in July with 3,065m in 19 holes.

Also in May 2012, the Company commenced multi-faceted drill programs consisting of hydraulic gradient, infrastructure, borrow source identification, and large-diameter wells for pump tests. The hydraulic gradient and infrastructure drilling consisted of 5,826m in 49 holes utilizing core drilling. The geotechnical and borrow source information was obtained from 2,695m drilled in 73 holes, utilizing core, sonic, and auger drilling methods. Seven large diameter wells have been drilled for a total of 1,031m.

The drill program from February through October 2012 totaled 15,731m in 199 holes.

No drill programs were completed during 2013 as the Company focused its efforts on the completion of the Feasibility Study.

**Sample Preparation, Analyses and Security**

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

The Company samples all holes from surface to total depth, using defined procedures. For RC samples, pulverized material is passed through a cyclone to separate solids from drilling fluids, then over a spinning conical splitter. The splitter is set to collect two identical splits of sample weighing 2-5 kg (4.4-11.0 pounds) each. Representative coarse material is collected and saved in chip trays for geological description. Samples are put in pre-numbered, bar-coded bags by the drill site crew. One sample is submitted for analysis, and one sample is kept for reference. Samples are secured on site and transported to a sample preparation facility operated by ALS Chemex in Fairbanks.

Core materials are collected at the drill site and placed in core boxes. Run blocks, orientation blocks and depths are placed in the boxes at site. The core is transported to a sample management facility at Livengood, where it is described, then sawn in half. Half of the core is collected for assaying and half remains for reference. Core samples are weighed before shipping.

## Table of Contents

The geologic work program at Livengood was designed and is supervised by Chris Puchner, Chief Geologist of the Company, who is a qualified person as defined by NI 43-101. Mr. Puchner is responsible for all aspects of the work, including the quality control/quality assurance program. The quality assurance/quality control program implemented by the Company meets or exceeds industry standards. A quality assurance/quality control program includes insertion of blanks and standards (1/10 samples) and duplicates (1/20 samples). Blanks help assess the presence of any contamination introduced during sample preparation and help calibrate the low end of the assay detection limits. Commercial standards are used to assess the accuracy of the analyses. Duplicates help assess the homogeneity of the sample material and the overall sample variance. The Company has undertaken rigorous protocols to assure accurate and precise results. Among other methods, weights are tracked throughout the various steps performed in the laboratory to minimize and track errors. A group of 2096 metallic screen fire assays performed in 2011 did not indicate any bias in the matching fire assays.

On-site project personnel photograph the core from each individual borehole prior to preparing the split core. Duplicate RC drill samples are collected with one split sent for analysis. Representative chips are retained for geological logging. On-site personnel at the project log and track all samples prior to sealing and shipping. All sample shipments are sealed and shipped to ALS Chemex in Fairbanks, Alaska, for preparation and then on to ALS Chemex in Reno, Nevada, or Vancouver, B.C., for assay. ALS Chemex's quality system complies with the requirements for the International Standards ISO 9001:2000 and ISO 17025:1999. Analytical accuracy and precision are monitored by the analysis of reagent blanks, reference material and replicate samples. Quality control is further assured by the use of international and in-house standards. Finally, representative blind duplicate samples are forwarded to ALS Chemex and an ISO compliant third party laboratory for additional quality control.

Data entry and database validation procedures have been checked and found to conform to industry practices. Procedures are in place to minimize data entry errors. These include pre-numbered, pre-tagged, bar-coded bags, and bar-coded data entry methods which relate all information to sample and drill interval information. Likewise, data validation checks are run on all information used in the geologic modeling and resource estimation process. Database entries for a random sample (10%) of drill holes used for the resource estimate were checked against the original Assay Certificates by one of the independent authors of the Livengood Report described below and the error rate was found to be within acceptable limits.

Analysis of assay data from core and RC sampling has been performed to check for downhole contamination of RC and to compare the data distributions produced by the two methods. Analysis of RC data has not indicated cyclic down hole contamination. Decay analysis conducted on both core drilling and RC drilling indicates similar patterns of monotonic grade increase or decrease. Comparison of the grade distributions between core and RC data were conducted using Quantile-Quantile plots, and simulation of population means for different numbers of samples. The comparison indicated that the mean of all core data was 4% lower than RC data. Comparison of core and RC data below the water table showed similar population means, suggesting that down hole contamination was not occurring.

Core and RC check samples have been collected during each drilling campaign by independent third parties. Results from these samples, as well as blanks and standards included, are consistent with the Company's initial results. This includes a similar increase in variance for samples at higher grades, a pattern consistent with nugget effect. No systematic high or low bias has been observed.

## **Feasibility Study**

In September 2013, the Company filed a technical report, prepared in accordance with Canadian National Instrument 43-101 ( NI 43-101 ), regarding a Feasibility Study to evaluate its Livengood Gold Project in Alaska. This technical report supports the July 23, 2013 news release, which provided results of the Feasibility Study and mineral reserves as well as updated mineral resources of the Project. Canadian National

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

Instrument 43-101 Technical Report on the Livengood Gold Project, Feasibility Study, Livengood, Alaska, prepared by Samuel Engineering, Inc. and dated September 4, 2013, has been filed under the Company's profile on SEDAR. Readers are encouraged to review the entire Technical Report on SEDAR. A more complete description of the Feasibility Study is set forth in Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations, under Livengood Gold Project Feasibility Study Results.

Table of Contents

**Environmental Studies, Permitting and Social and Community Impacts**

The Livengood Gold Project is currently operating within compliance of all environmental regulations that apply during the exploration stage of major mineral projects. The Company has received all necessary exploration permits for activities such as trenching, drill road building and drilling. These permits are also reviewed by related state and federal agencies that can comment and require specific changes to the proposed work plans to minimize impacts on the environment. The permitting process for major exploration projects generally requires 30-60 days for processing. The Company currently has all necessary permits with respect to its exploration activities in Alaska. Although the Company has never had an issue with the timely processing of exploration permits there can be no assurances that delays in permit approval will not occur. Reclamation of surface disturbance associated with exploration activities is conducted concurrently where required.

The Company has been conducting extensive, multi-disciplinary environmental baseline studies in and around the project area since 2008 in order to understand the current environmental conditions and to allow project design to be optimized to minimize potential environmental effects. The environmental baseline programs conducted or currently underway at Livengood include:

- surface water and hydrology;
- groundwater hydrogeology;
- geohydrology;
- wetlands and vegetation;
- meteorology and air quality;
- aquatic life and resources;
- wildlife and habitat;
- cultural resources;
- rock characterization; and
- geochemical characteristics.

Based on review of the studies completed to date, there are no known environmental issues that are anticipated to materially impact the Livengood Gold Project's ability to extract the gold resource.

Looking forward to potential project development, a site-specific monitoring plan and water management plan for both operations and post mine closure will be developed in conjunction with detailed engineering and project permit planning. Development of the Livengood Gold Project will require a number of state and federal permits. Federal permits will be issued pursuant to the National Environmental Policy Act (NEPA)

and Council of Environmental Quality (CEQ). In fulfillment of the NEPA requirements, the Livengood Gold Project will be required to prepare an Environmental Impact Statement. Although at this time it is unknown which department will become the lead federal agency, the State of Alaska is expected to take a cooperating role to coordinate the NEPA review with the State permit process. Actual permitting timelines are controlled by the NEPA review and US Federal and State agency decisions. There are no municipal or community agreements required for the Livengood Gold Project.

### **ITEM 3. LEGAL PROCEEDINGS**

We are periodically a party to or otherwise involved in legal proceedings arising in the normal course of business. Management does not believe that there is any pending or threatened proceeding against us which, if determined adversely, would have a material adverse effect on our financial position, liquidity or results of operations.

### **ITEM 4. MINE SAFETY DISCLOSURES**

Pursuant to Section 1503(a) of the Dodd-Frank Act, issuers that are operators, or that have a subsidiary that is an operator, of a coal or other mine in the United States are required to disclose specified information about mine health and safety in their periodic reports. These reporting requirements are based on the safety and health requirements applicable to mines under the Federal Mine Safety and Health Act of 1977 (the Mine Act ) which is administered by the U.S. Department of Labor's Mine Safety and Health Administration ( MSHA ). During the fiscal year ended December 31, 2013, the Company and its subsidiaries were not subject to regulation by MSHA under the Mine Act and thus no disclosure is required under Section 1503(a) of the Dodd-Frank Act.

Table of Contents**PART II****ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES****Price Range of Common Shares**

The common shares of the Company are listed and posted for trading on the TSX under the symbol ITH , on the NYSE MKT under the symbol THM , and on the Frankfurt Stock Exchange under the symbol IW9 . The following table sets forth the highest and lowest intraday sales prices for the common share as reported by the TSX and NYSE MKT for the periods indicated:

Year ended December 31, 2013	Toronto Stock Exchange				NYSE MKT			
	C\$ High	C\$ Low	\$ High	\$ Low	C\$ High	C\$ Low	\$ High	\$ Low
Fourth Quarter	\$ 0.72	\$ 0.31	\$ 0.69	\$ 0.30	\$ 0.95	\$ 0.33	\$ 0.90	\$ 0.31
Third Quarter	\$ 1.56	\$ 0.46	\$ 1.55	\$ 0.43	\$ 2.48	\$ 1.35	\$ 2.49	\$ 1.31
Second Quarter	\$ 2.87	\$ 1.85	\$ 2.93	\$ 1.91	\$ 3.26	\$ 2.44	\$ 3.25	\$ 2.41
First Quarter	\$ 4.43	\$ 2.41	\$ 4.45	\$ 2.40	\$ 5.61	\$ 4.00	\$ 5.62	\$ 4.00

As at March 10, 2014, there were 98,068,638 common shares issued and outstanding, and the Company had approximately 100 shareholders of record. On March 10, 2014, the closing price of the common shares as reported by the TSX and NYSE MKT was C\$0.93 and \$0.82, respectively.

**Dividends**

Since its inception, ITH has not paid any dividends. ITH has no present intention of paying any dividends, as it anticipates that all available funds will be invested to finance the growth of its business. The Board will determine if and when dividends should be declared and paid in the future after taking into account many factors, including ITH's financial condition, operating results and anticipated cash needs at the relevant time. There are no restrictions which prevent ITH from paying dividends.

**Recent Sales of Unregistered Equity Securities**

None

**Purchases of Equity Securities by the Issuer and Affiliated Purchasers**

None.

**Exchange Controls**

Canada has no system of exchange controls. There are no Canadian restrictions on the repatriation of capital or earnings of a Canadian public company to non-resident investors. There are no laws in Canada or exchange restrictions affecting the remittance of dividends, profits, interest, royalties and other payments to non-resident holders of the Company's securities, except as discussed in Certain Canadian Federal Income Tax Considerations below.

Table of Contents

There are no limitations under the laws of Canada or in the organizing documents of the Company on the right of foreigners to hold or vote securities of the Company, except that the Investment Canada Act may require review and approval by the Minister of Industry (Canada) of certain acquisitions of control of the Company by a non-Canadian. The threshold for acquisitions of control is generally defined as being one-third or more of the voting shares of the Company. Non-Canadian generally means an individual who is not a Canadian citizen, or a corporation, partnership, trust or joint venture that is ultimately controlled by non-Canadians.

**Certain Canadian Federal Income Tax Considerations for U.S. Resident Holders**

This summary is applicable to a holder or prospective purchaser of common shares who, for the purposes of the *Income Tax Act* (Canada) (the Tax Act) and any applicable treaty and at all relevant times, is not (and is not deemed to be) resident in Canada, does not (and is not deemed to) use or hold the common shares in, or in the course of, carrying on a business in Canada, and is not an insurer that carries on an insurance business in Canada and elsewhere.

This summary is based on the current provisions of the Tax Act, the regulations thereunder, all specific proposals to amend such Act and regulations publicly announced by or on behalf of the Minister of Finance (Canada) prior to the date hereof and the Company's understanding of the administrative policies and assessing practices published in writing by the Canada Revenue Agency (CRA) prior to the date hereof. This summary does not otherwise take into account any change in law or administrative policy or assessing practice, whether by judicial, governmental, legislative or administrative decision or action, nor does it take into account other federal or provincial, territorial or foreign tax consequences, which may vary from the Canadian federal income tax considerations described herein.

This summary is of a general nature only and it is not intended to be, nor should it be construed to be, legal or tax advice to any holder of the common shares and no representation with respect to Canadian federal income tax consequences to any holder of common shares is made herein. Accordingly, prospective purchasers and holders of the common shares should consult their own tax advisers with respect to their individual circumstances.

***Dividends on Common Shares***

Canadian withholding tax at a rate of 25% (subject to reduction under the provisions of any applicable tax treaty) will be payable on dividends (or amounts paid or credited on account or in lieu of payment of, or in satisfaction of, dividends) paid or credited to a holder of common shares. Under the *Canada U.S. Income Tax Convention (1980)*, as amended (the Canada U.S. Treaty) the withholding tax rate is generally reduced to 15% for a holder entitled to the benefits of the Canada U.S. Treaty who is the beneficial owner of the dividends (or 5% if the holder is a company that owns at least 10% of the common shares).

Certain U.S.-resident entities that are fiscally transparent for United States federal income tax purposes (including limited liability companies) may not in all circumstances be regarded by the CRA as entitled to the benefits of the Canada U.S. Treaty. Members of or holders of an interest in such an entity that holds common shares should consult their own tax advisers regarding the extent, if any, to which the CRA will extend the benefits of the Canada U.S. Treaty to the entity in respect of its common shares.

*Capital Gains and Losses*

Subject to the provisions of any relevant tax treaty, capital gains realized by a holder on the disposition or deemed disposition of common shares held as capital property will not be subject to Canadian tax unless the common shares are taxable Canadian property (as defined in the Tax Act), in which case the capital gains will be subject to Canadian tax at rates which will approximate those payable by a Canadian resident.

Common shares of the Company generally will not be taxable Canadian property to a holder provided that, at the time of the disposition or deemed disposition, the common shares are listed on a designated stock exchange (which currently includes the TSX and NYSE MKT), unless at any time during the 60-month period that ends at that time: (a) such holder, persons with whom such holder did not deal at arm's length, or such holder together with all such persons, owned 25% or more of the issued shares of any class or series of the capital stock of the Company; and

Table of Contents

(b) more than 50% of the fair market value of the common shares disposed of was derived directly or indirectly from one or any combination of real or immovable property situated in Canada, Canadian resource properties (as defined in the Tax Act), timber resource properties (as defined in the Tax Act), and options in respect of, or interests in, or civil law rights in, any such properties (whether or not such property exists). Under proposed amendments to the Tax Act released by the Department of Finance (Canada) on July 12, 2013, the 25% ownership test will apply to common shares of the Company owned by one or any combination of the holder, persons with whom the holder does not deal at arm's length, and partnerships whose members include, either directly or indirectly through one or more partnerships, the holder or persons that do not deal at arm's length with the holder. In certain circumstances set out in the Tax Act, the common shares may be deemed to be taxable Canadian property.

Under the Canada U.S. Treaty, a holder entitled to the benefits of the Canada U.S. Treaty and to whom the common shares are taxable Canadian property will not be subject to Canadian tax on the disposition or deemed disposition of the common shares unless at the time of disposition or deemed disposition, the value of the common shares is derived principally from real property situated in Canada.

**Certain U.S. Federal Income Tax Considerations for U.S. Holders**

The following is a discussion of certain material U.S. federal income tax consequences to U.S. Holders (as defined below) of acquiring, owning, and disposing of our common shares. This discussion does not purport to be a comprehensive description of all of the U.S. tax considerations that may be relevant to a particular person's decision to acquire the common shares, including any state, local or non-U.S. tax consequences of the ownership of the common shares. This discussion applies to only to those investors that hold the common shares as capital assets for U.S. tax purposes (generally, for investment) and does not discuss all aspects of U.S. federal income taxation that may be relevant to investors subject to special treatment under U.S. federal income tax law (including, for example, a holder liable for the alternative minimum tax or a holder that actually or constructively owns 10% or more by voting power or value of our common stock). This discussion is based on the U.S. Internal Revenue Code of 1986, as amended (the Code), its legislative history, existing and proposed U.S. Treasury regulations, published rulings and other administrative guidance of the U.S. Internal Revenue Service (the IRS) and court decisions, all as in effect on the date hereof. These laws are subject to change or different interpretation by the IRS or a court, possibly on a retroactive basis. This discussion also assumes that the Company is not, and will not become, a controlled foreign corporation as determined for U.S. federal income tax purposes.

As used herein, the term U.S. Holder means a beneficial owner of our common shares that is:

- an individual citizen or resident of the United States;
- a corporation (or other entity treated as a corporation for U.S. federal income tax purposes) created or organized in the United States or under the laws of the United States, any state or political subdivision thereof, or the District of Columbia;
- an estate, the income of which is subject to U.S. federal income tax regardless of its source; or
- a trust (i) if a U.S. court is able to exercise primary supervision over the trust's administration and one or more U.S. persons are authorized to control all substantial decisions of the trust or (ii) that has a valid election in effect to be treated as a U.S. person under applicable U.S. Treasury regulations.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

If a partnership (including any entity treated as a partnership for U.S. federal income tax purposes) is a beneficial owner of the common shares, the U.S. tax treatment of a partner in the partnership generally will depend on the status of the partner and the activities of the partnership. A holder of the common shares that is a partnership and partners in such a partnership should consult their own tax advisors about the U.S. federal income tax consequences of acquiring, owning, disposing of the common shares.

### *Distributions*

Subject to different treatment under the passive foreign investment company rules discussed below, a U.S. Holder must include in gross income as dividend income the gross amount of any distribution paid on the common shares (including the amount of any non-U.S. taxes withheld from such amount), to the extent such distribution is paid out of our current or accumulated earnings and profits (as determined for U.S. federal income tax purposes). Distributions in excess of our current and accumulated earnings and profits (as determined for U.S. federal income tax purposes) will first be treated as a non-taxable return of capital to the extent of the U.S. Holder's basis in the

Table of Contents

common shares and thereafter as gain from the sale or exchange of common shares. See *Sale, Exchange, or Other Disposition of Common Shares* below.

Dividends received by U.S. Holders that are individuals, estates, or trusts will be taxed at preferential rates if such dividends meet the requirements of qualified dividend income. Dividends that fail to meet such requirements, and dividends received by corporate U.S. Holders, are taxed at ordinary income rates. In order for dividends to qualify as qualified dividend income, an entity must be considered a qualified foreign corporation and certain other requirements must be met. While we believe the Company is a qualified foreign corporation, a dividend received by a U.S. Holder will not be qualified dividend income if the Company is a passive foreign investment company for the taxable year during which the dividend is paid or the immediately preceding taxable year. See the discussion below regarding our passive foreign investment company status under *Passive Foreign Investment Company Rules*. In the case of a corporate U.S. Holder, dividends received generally will not be eligible for the dividends-received deduction.

Dividends paid on the common shares will generally be treated as foreign source income for U.S. foreign tax credit purposes under special U.S. federal income tax rules, subject to various classifications and other limitations. The rules relating to computing foreign tax credits are complex. U.S. Holders should consult their own tax advisors to determine the foreign tax credit implications of owning common shares.

The distribution rules are complex, and each U.S. Holder should consult its own tax advisors regarding the distribution rules.

***Sale, Exchange, or Other Disposition of Common Shares***

Subject to different treatment under the passive foreign investment company rules discussed below, a U.S. Holder that sells or otherwise disposes of our common shares will recognize capital gain or loss for U.S. federal income tax purposes equal to the difference between (i) the U.S. dollar value of the amount realized on the sale or disposition and (ii) the tax basis, determined in U.S. dollars, of such common shares. Such gain or loss will be treated as long-term capital gain or loss if the U.S. Holder's holding period is greater than one year at the time of sale, exchange, or other disposition. Long-term capital gains of individuals are generally subject to preferential maximum U.S. federal income tax rates. A U.S. Holder's ability to deduct capital losses is subject to certain limitations.

***Passive Foreign Investment Company Rules***

If the Company is considered a passive foreign investment company (a PFIC) for U.S. federal income tax purposes at any time during a U.S. Holder's holding period, then certain different and potentially adverse tax consequences would apply to such U.S. Holder's acquisition, ownership, and disposition of common shares. In general, a non-U.S. corporation will be a PFIC in any taxable year in which, after applying certain look-through rules, either (1) at least 75% of its gross income for the taxable year is passive income; or (2) at least 50% of the average value (determined on a quarterly basis) of its assets is attributable to assets that produce or are held for the production of passive income. Passive income generally includes dividends, interest, royalties, rents (other than certain rents and royalties derived in the active conduct of a trade or business), the excess of gains over losses from the disposition of certain assets that produce passive income. If a foreign corporation owns at least 25% by value of the stock of another corporation, the foreign corporation is treated for purposes of the PFIC tests as owning its proportionate share of the assets of the other corporation, as receiving directly its proportionate share of the other corporation's income.

**We believe that we were a PFIC for U.S. federal income tax purposes during the fiscal year ended December 31, 2013, and we expect that we will be a PFIC in the current year and that we may be a PFIC in future years. The determination of whether or not the Company is a PFIC is a factual determination dependent on a number of factors that cannot be made until the close of the applicable tax year and accordingly no assurances can be given regarding the Company's PFIC status for the current year or any future year. The Company's status as a PFIC can have significant adverse tax consequences for a U.S. Holder if we are a PFIC for any year during such U.S. Holder's holding period.**

A U.S. Holder that holds common shares while the Company is a PFIC may be subject to increased tax liability upon the sale, exchange, or other disposition of the common shares or upon the receipt of certain distributions, regardless of whether the Company is a PFIC in the year in which such disposition or distribution occurs. These

Table of Contents

adverse tax consequences will not apply, however, if (i) the U.S. Holder timely files and maintains a qualified electing fund ( QEF ) election to be taxed annually on the U.S. Holder's pro rata portion of the Company's earnings and profits; (ii) the U.S. Holder is eligible to make a purging election and timely does so, as described below; or (iii) the U.S. Holder timely makes a mark-to-market election, as described below.

The adverse tax consequences include:

- (a) Excess distributions by the Company are subject to the following special rules. An excess distribution generally is the excess of the amount a PFIC distributes to a shareholder during a taxable year over 125% of the average amount it distributed to the shareholder during the three preceding taxable years or, if shorter, the part of the shareholder's holding period before the taxable year. Distributions with respect to the common shares made by ITH during the taxable year to a U.S. Holder that are excess distributions must be allocated ratably to each day of the U.S. Holder's holding period. The amounts allocated to the current taxable year and to taxable years prior to the first year in which ITH was classified as a PFIC are included as ordinary income in a U.S. Holder's gross income for that year. The amount allocated to each other prior taxable year is taxed as ordinary income at the highest tax rate in effect for the U.S. Holder in that prior year (without offset by any net operating loss for such year) and the tax is subject to an interest charge at the rate applicable to deficiencies in income taxes (the special interest charge).
- (b) The entire amount of any gain realized upon the sale or other disposition of the common shares will be treated as an excess distribution made in the year of sale or other disposition and as a consequence will be treated as ordinary income and, to the extent allocated to years prior to the year of sale or disposition, will be subject to the special interest charge described above.

Special rules apply for calculating the amount of the foreign tax credit with respect to excess distributions by a PFIC.

While there are U.S. federal income tax elections that sometimes can be made to mitigate these adverse tax consequences (including, without limitation, the QEF Election and the Mark-to-Market Election discussed below), such elections are available in limited circumstances and must be made in a timely manner. U.S. Holders are urged to consult their own tax advisers regarding the potential application of the PFIC rules to the acquisition, ownership, and disposition of common shares.

*QEF Election.* A U.S. Holder of stock in a PFIC may make a QEF election with respect to such PFIC to elect out of the tax treatment discussed above. Generally, a QEF election should be made with the filing of a U.S. Holder's U.S. federal income tax return for the first taxable year for which both (i) the U.S. Holder holds common shares of ITH, and (ii) the Company was a PFIC. A U.S. Holder that timely makes a valid QEF election with respect to a PFIC will generally include in gross income for a taxable year (i) as ordinary income, such holder's pro rata share of the Company's ordinary earnings for the taxable year, and (ii) as long-term capital gain, such holder's pro rata share of the Company's net capital gain for the taxable year. However, the QEF election is available only if such PFIC provides such U.S. Holder with certain information regarding its earnings and profits as required under applicable U.S. Treasury regulations. U.S. Holders should be aware that there can be no assurance that ITH will satisfy record keeping requirements under the QEF rules or that ITH will supply U.S. Holders with required information under the QEF rules, in event that ITH is a PFIC and a U.S. Holder wishes to make a QEF election.

*Deemed Sale Election.* If the Company is a PFIC for any year during which a U.S. Holder holds common shares, but the Company ceases in a subsequent year to be a PFIC, then a U.S. Holder may make a deemed sale election for such subsequent year in order to avoid the adverse PFIC tax treatment described above that would otherwise continue to apply because of the Company's having previously been a PFIC. If such election is timely made, the U.S. Holder would be deemed to have sold the common shares held by the holder at their fair market value, and any gain from such deemed sale would be taxed as an excess distribution (as described above). The basis of the common shares would be increased by the gain recognized, and a new holding period would begin for the common shares for purposes of the PFIC rules. The U.S. Holder would not

recognize any loss incurred on the deemed sale, and such a loss would not result in a reduction in basis of the common shares. After the deemed sale election, the U.S. Holder's common shares with respect to which the deemed sale election was made would not be treated as shares in a PFIC, unless the Company subsequently becomes a PFIC. The rules regarding deemed sale elections are very complex. U.S. Holders are strongly urged to consult their tax advisors about the deemed sale election.

Table of Contents

*Mark-to-Market Election.* Alternatively, a U.S. Holder of marketable stock (as defined in the applicable Treasury regulations) in a PFIC may make a mark-to-market election for such stock to elect out of the adverse PFIC tax treatment discussed above. If a U.S. Holder makes a mark-to-market election for shares of marketable stock, the U.S. Holder will include in income each year an amount equal to the excess, if any, of the fair market value of the shares as of the close of the holder's taxable year over the holder's adjusted basis in such shares. A U.S. Holder is allowed a deduction for the excess, if any, of the adjusted basis of the shares over their fair market value as of the close of the taxable year. However, deductions are allowable only to the extent of any net mark-to-market gains on the shares included in the holder's income for prior taxable years. Amounts included in a U.S. Holder's income under a mark-to-market election, as well as gain on the actual sale or other disposition of the shares, are treated as ordinary income. Ordinary loss treatment also applies to the deductible portion of any mark-to-market loss on the shares, as well as to any loss realized on the actual sale or disposition of the shares, to the extent that the amount of such loss does not exceed the net mark-to-market gains previously included for such shares. A U.S. Holder's basis in the shares will be adjusted to reflect any such income or loss amounts. However, the special interest charge and related adverse tax consequences described above for non-electing holders may continue to apply on a limited basis if the U.S. Holder makes the mark-to-market election after such holder's holding period for the shares has begun.

Because our common shares are regularly traded on TSX, the NYSE MKT, and the Frankfurt Stock Exchange, we anticipate that our common shares will be marketable stock. However, we cannot assure that our common shares are or will be marketable stock, and U.S. Holders of common shares are urged to consult their tax advisors as to whether the common shares would qualify for the mark-to-market election.

*Form 8621.* U.S. Holders who own common shares during any year in which the Company is a PFIC must file IRS Form 8621 with their U.S. federal income tax return for each year in which such holder owns common shares and either recognizes gain on a disposition of such common shares, receives certain distributions from the Company, or makes a reportable election. Pursuant to Code Section 1298(f), all U.S. Holders may be required to provide annual information regarding ownership of an interest in a PFIC. As of the date hereof, the IRS has suspended the reporting requirements imposed under Code Section 1298(f) for PFIC shareholders that are not otherwise required to file IRS Form 8621.

The PFIC rules are complex, and U.S. Holders should consult their own tax advisors regarding the PFIC rules and how they may affect the U.S. federal income tax consequences of the acquisition, ownership, and disposition of common shares in the event the Company is a PFIC at any time during such holding period for such common shares.

***Medicare Tax on Unearned Income***

For taxable years beginning after December 31, 2012, a U.S. Holder that is an individual or estate, or a trust that does not fall into a special class of trusts that is exempt from such tax, will be subject to a 3.8% tax on the lesser of (1) the U.S. Holder's net investment income for the relevant taxable year and (2) the excess of the U.S. Holder's modified gross income for the taxable year over a certain threshold (which in the case of an individual will be between \$125,000 and \$250,000, depending on the individual's circumstances). A holder's net investment income will generally include its dividend income and its net gains from the disposition of common shares, unless such dividends or net gains are derived in the ordinary course of the conduct of a trade or business (other than a trade or business that consists of certain passive or trading activities). If you are a U.S. Holder that is an individual, estate or trust, you are urged to consult your tax advisors regarding the applicability of the Medicare tax on your income and gains in respect of your investment in the common shares.

***Foreign Financial Assets***

Owners of specified foreign financial assets with an aggregate value in excess of \$50,000 (and in some circumstances, a higher threshold) may be required to file an information report with respect to such assets with their tax returns. Specified foreign financial assets may include financial accounts maintained by foreign financial institutions, as well as the following, but only if they are not held in accounts maintained by financial institutions: (i) stocks and securities issued by non-U.S. persons, (ii) financial instruments and contracts held for investment that have non-U.S. issuers or counterparties, and (iii) interests in foreign entities. U.S. Holders are urged to consult their tax advisors regarding the application of this reporting requirement to them.

Table of Contents

***Foreign Currency Transactions***

Generally, amounts received by a U.S. Holder in foreign currency (including distributions paid in foreign currency to a U.S. Holder in connection with the ownership of common shares or on the sale, exchange, or other disposition of common shares) will be equal to the U.S. dollar value of such foreign currency based on the applicable exchange rate on the date of receipt (regardless of whether such foreign currency is converted into U.S. dollars at that time). The subsequent disposition of any foreign currency received (including an exchange for U.S. currency) will generally give rise to ordinary gain or loss. Each U.S. Holder should consult its own tax adviser regarding the U.S. federal income tax consequences of receiving, owning, and disposing of foreign currency.

***Information Reporting and Backup Withholding***

Payments made within the United States or by a U.S. payor or U.S. middleman, of dividends on, and proceeds arising from the sale or other taxable disposition of, common shares will generally be subject to information reporting and backup withholding tax if a U.S. Holder (a) fails to furnish such U.S. Holder's correct U.S. taxpayer identification number (generally on Form W-9), (b) furnishes an incorrect U.S. taxpayer identification number, (c) is notified by the IRS that such U.S. Holder has previously failed to properly report items subject to backup withholding tax, or (d) fails to certify, under penalty of perjury, that such U.S. Holder has furnished its correct U.S. taxpayer identification number and that the IRS has not notified such U.S. Holder that it is subject to backup withholding tax. However, certain exempt persons generally are excluded from these information reporting and backup withholding rules.

Backup withholding is not an additional tax. Any amounts withheld under the U.S. backup withholding tax rules will be allowed as a credit against a U.S. Holder's U.S. federal income tax liability, if any, or will be refunded, if such U.S. Holder furnishes required information to the IRS in a timely manner. Each U.S. Holder should consult its own tax advisor regarding the information reporting and backup withholding rules.

Purchasing, holding, or disposing of securities of the Company may have tax consequences under the laws of the United States and Canada that are not described in this Annual Report on Form 10-K. Shareholders are solely responsible for determining the tax consequences applicable to their particular circumstances and should consult their own tax advisors concerning an investment in the Company's common shares.

Table of Contents**ITEM 6. SELECTED FINANCIAL DATA**

The selected financial data set forth in the table below has been taken from the Company's audited consolidated financial statements and should be read in conjunction with those financial statements and the notes thereto. The consolidated financial statements have been prepared in accordance with U.S. generally accepted accounting principles ( US GAAP ). The selected historical financial data is qualified in its entirety by, and should be read in conjunction with, Item 7, Management's Discussion and Analysis of Financial Condition and Results of Operations and the financial statements and the notes thereto attached hereto under Item 8, Financial Statements and Supplementary Data.

**ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS.**

**Current Business Activities**

**General**

*Livengood Gold Project Developments*

During the year ended December 31, 2013 and to the date of this report, the Company advanced its Livengood Gold Project in Alaska with the issuance of the Technical Report on the Feasibility Study in September 2013. The Feasibility Study had been underway since early 2012. The Feasibility Study evaluated a 100,000 ton per day project that would produce 8 million ounces of gold over 14 years. Using the trailing three year gold price of \$1,500 per ounce, the project generates a minimal positive return. The Company is currently investigating a number of opportunities, including those identified in the Feasibility Study and those subsequently developed by the Company, for optimization and reducing project costs.

*Other Developments*

In December 2013, the Company announced the appointment of Thomas E. Irwin as President and Chief Executive Officer of the Company effective January 1, 2014. Mr. Irwin had been serving as Vice President, supporting corporate strategic initiatives as well as being responsible for technical matters for the Company's Livengood Gold Project.

***Livengood Gold Project - Feasibility Study Results***

The purpose of the Feasibility Study was to advance the Livengood Gold Project to a level that will enable a decision as to whether to advance to permitting and the execution phase of the Project. Using the trailing three year gold price of \$1,500 per ounce, the Project generates an after-tax internal rate of return ( IRR ) of 1.7%.

**Mining and Production**

As envisioned in the Feasibility Study, the Project design is a conventional, owner-operated, surface mine that will utilize large-scale mining equipment in a blast/load/haul operation. Ore is planned to be processed in a 100,000 ton per day ( tpd ) comminution circuit consisting of a primary gyratory crusher, wet grinding in a single semi-autogenous ( SAG ) mill and two ball mills, followed by a gravity gold circuit, a

conventional carbon in leach ( CIL ) circuit and a refinery.

The 100,000 tpd mine plan contains 501 million tons of ore mined from the Livengood open pit over the 14 year operating life. Total gold recovered is expected to be 8 million ounces. Average annual gold production over the life-of-mine ( LOM ) is 577,600 ounces, averaging 698,500 ounces during the first five years of operations. Mining and ore stockpiling will begin during construction phase and will be two years in advance of plant commissioning.

Table of Contents**Project Economics**

The project economics were generated using the trailing three year average gold price of \$1,500 per ounce resulting in an after-tax internal rate of IRR of 1.7% with an all-in cost of production of \$1,474 per ounce. The following table provides additional details of the Project's economics (after-tax) at various gold prices.

Gold Price per Ounce	NPV5% (\$M)	IRR (%)	Payback (years)
\$ 1,200	(1,835)	(16.1)	n/a
\$ 1,300	(1,336)	(7.2)	n/a
\$ 1,400	(854)	(1.9)	n/a
<b>\$ 1,500</b>	<b>(440)</b>	<b>1.7</b>	<b>10.8</b>
\$ 1,600	(50)	4.6	8.8
\$ 1,700	336	7.3	7.2
\$ 1,800	723	9.7	6.1
\$ 1,900	1,109	12.0	5.2
\$ 2,000	1,493	14.1	4.6
\$ 2,100	1,869	16.1	4.2
\$ 2,200	2,219	17.8	3.8

**Capital Costs**

The total estimated cost to design, procure, construct and commission the facilities described in this section is \$2.79 billion and sustaining capital of \$893 million. In addition to the large-scale mining equipment and process circuit described above, the Project will include a lined tailings management system, two water reservoirs, an administration office/shop/warehouse complex and a 440 person camp. The Project will also include construction of an 80 kilometer (50 mile) transmission line to the site from the existing grid power near Fairbanks, Alaska. The capital cost estimate is expressed in nominal 2013 US dollars. No provision has been included to offset future escalation, and the estimate excludes sunk costs (costs prior to the start of detailed design) and risks due to labor disputes, permitting delays, weather delays or any other force majeure occurrences.

Site deconstruction and reclamation will proceed in stages at a total cost of \$353 million. Initial reclamation and salvage will take 5 years with costs projected at \$253.4 million. After site stabilization, preparation of final site configuration and ongoing water treatment is anticipated. The initial and sustaining capital includes a fully lined tailings management facility; this facility has been included as best practices for environmental stewardship.

Key capital expenditures for initial and sustaining capital requirements are identified in the following table:

Capital Expenditures (\$Millions)	Initial Capital	Sustaining Capital
Process facilities	\$ 1,119	\$ 26
Infrastructure facilities	708	506

Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

Power supply	129	
Mine equipment	189	126
Mine development	177	
Other owners costs	166	9
Contingency	271	
Funding of reclamation trust fund(1)	32	226
Total capital	\$ 2,790	\$ 893

---

*Note: may not add due to rounding.*

(1) Total estimated reclamation costs are \$353 million.

Table of Contents**Operating Costs**

The following table presents a breakdown of all-in operating cost of production over the projected life of the Project. Operating costs were estimated based on second quarter 2013 current US dollars without escalation. LOM operating cost is anticipated to be \$1,030/oz and all-in after-tax LOM costs is anticipated to be \$1,474/oz. All-in sustaining cost of production is a non-GAAP financial measure and substantially conforms to the World Gold Council guidance on production cost reporting issued in June 2013. Non-GAAP financial measures are not defined under GAAP and are provided as additional information and should not be considered in isolation or as a substitute for other financial measures prepared in accordance with GAAP. See further discussion of non-GAAP measures below.

<b>All-in Sustaining Cost of Production</b>	<b>\$/Ounce</b>	<b>LOM (\$Million)</b>
On-site mine operating costs	\$ 933	\$ 7,543
Royalties	45	362
Third-party smelting, refining and transport costs	9	75
Sub-total	987	7,980
Reclamation and remediation	43	353
Sub-total production cost before capital	1,030	8,333
Capital expenditures (initial and sustaining)(1)	416	3,367
All-in costs pre-tax	1,447	11,700
Mining and income taxes	27	220
All-in costs after-tax	\$ 1,474	\$ 11,920

*Rounding of some figures in the table above may lead to minor discrepancies in totals.*

(1) Excludes \$32 million upfront funding included in reclamation and remediation above and \$57 million for recoverable initial stores inventory.

**Annual Production**

The table below highlights the production schedule contemplated in the Feasibility Study. Total life-of-mine production is projected to be approximately 8,086,000 ounces. For the first five years, it is anticipated that average annual production would be 698,500 ounces.

<b>Years</b>	<b>Mill Feed Grade (g/tonne)</b>	<b>Ounces Produced (000 s)</b>
1	1.08	763.2
2	0.94	844.2
3	0.67	594.0
4	0.76	671.3
5	0.74	619.7
6	0.63	558.3
7	0.66	590.3
8	0.66	582.3

Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

9	0.67	554.2
10	0.72	562.9
11	0.82	720.7
12	0.54	421.6
13	0.39	321.4
14	0.39	282.2
LOM	0.69	8,086.4

Table of Contents**Project Mineral Resources and Reserves**

The global mineral resource estimate has been updated from that published in August 2011 to include drilling in the deposit since that time. The resource model was constructed using Gemcom GEMS® and the Stanford GSLIB (Geostatistical Software Library) MIK post processing routine. The resource was estimated using Multiple Indicator Kriging techniques.

A three-dimensionally defined stratigraphic model, based on interpretations by ITH geologists, was used to code the rock type block model. A three-dimensionally defined probability grade shell (0.1 g/t) was used to constrain the gold estimation. Gold contained within each block was estimated using nine indicator thresholds. The block model was tagged with the geologic model using a block majority coding method. Because there are significant grade discontinuities at stratigraphic contacts, hard boundaries were used between each of the stratigraphic units so that data for each stratigraphic unit was used only for that unit.

A summary of the estimated global (in-situ) mineral resource is presented in the table below for cutoff grades of 0.2, 0.3, 0.5, and 0.7 g/t gold.

<b>Classification</b>	<b>Gold Cutoff (g/t)</b>	<b>Tonnes (Millions)</b>	<b>Gold (g/t)</b>	<b>Gold Ounces (Millions)</b>
Measured	0.20	994	0.52	16.4
Indicated	0.20	112	0.45	1.6
<b>Measured &amp; Indicated</b>	<b>0.20</b>	<b>1,106</b>	<b>0.51</b>	<b>18.0</b>
Inferred	0.20	438	0.41	5.8
Measured	0.30	731	0.61	14.4
Indicated	0.30	71	0.56	1.3
<b>Measured &amp; Indicated</b>	<b>0.30</b>	<b>802</b>	<b>0.61</b>	<b>15.7</b>

Indicated	0.50	31	0.80	0.8
<b>Measured &amp; Indicated</b>	<b>0.50</b>	<b>401</b>	<b>0.82</b>	<b>10.6</b>
Inferred	0.50	92	0.76	2.3
Measured	0.70	179	1.08	6.2
Indicated	0.70	13	1.09	0.5
<b>Measured &amp; Indicated</b>	<b>0.70</b>	<b>192</b>	<b>1.08</b>	<b>6.7</b>
Inferred	0.70	34	1.08	1.2

*Mineral resources that are not mineral reserves do not have demonstrated economic viability. Mineral resource estimates do not account for mineability, selectivity, mining loss and dilution. These mineral resource estimates include inferred mineral resources that are normally considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as mineral reserves. There is also no certainty that these inferred mineral resources will be converted to measured and indicated categories through further drilling, or into mineral reserves, once economic considerations are applied.*

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

The Feasibility Study has converted a portion of these mineral resources into proven reserves of 434 million tonnes at an average grade of 0.69 g/tonne (9.6 million ounces) and probable reserves of 20 million tonnes at an average grade of 0.70 g/tonne (454,000 ounces) at the gold price of \$1,500 per ounce (the trailing three year average).

Table of Contents

The table below illustrates the updated reserve estimate for the Project, calculated at a gold price of \$1,500 per ounce.

Rock Type	Tonnes (000s)	Average Grade g Au/t	Ounces (000s)
RT4 Cambrian	58,247.3	0.639	1,196.6
RT5 Sunshine Upper Sediments	126,592.2	0.576	2,344.6
RT6 Upper Sediments	80,912.3	0.733	1,906.0
RT7 Lower Sediments-Bleached	51,020.0	0.772	1,266.3
RT8 Sunshine Volcanics	6,707.4	0.659	142.1
RT9 Volcanics	111,013.9	0.775	2,766.0
<b>Total proven:</b>	<b>434,493.0</b>	<b>0.689</b>	<b>9,621.5</b>
RT4 Cambrian	5,129.8	0.720	118.7
RT5 Sunshine Upper Sediments	1,503.4	0.535	25.8
RT6 Upper Sediments	2,754.6	0.637	56.4
RT7 Lower Sediments-Bleached	4,005.3	0.726	93.5
RT8 Sunshine Volcanics	2,321.2	0.669	49.9
RT9 Volcanics	4,416.4	0.773	109.7
<b>Total probable:</b>	<b>20,130.8</b>	<b>0.702</b>	<b>454.0</b>
RT4 Cambrian	63,377.1	0.645	1,315.2

RT6 Upper Sediments	83,666.9	0.730	1,962.4
RT7 Lower Sediments-Bleached	55,025.3	0.769	1,359.8
RT8 Sunshine Volcanics	9,028.6	0.662	192.0
RT9 Volcanics	115,430.3	0.775	2,875.7
<b>Total proven and probable:</b>	<b>454,623.8</b>	<b>0.689</b>	<b>10,075.6</b>

*Rounding of some figures may lead to minor discrepancies in totals.*

**Metallurgy, Processing and Infrastructure**

ITH has completed extensive metallurgic test work on the five rock types that comprise 98% of the reserve.

ITH's metallurgic test work programs evaluated: (1) ore hardness with depth and rock type; (2) the use of a SAG mill and two ball mills versus High Pressure Grinding Roll technology; (3) the use of a grind, gravity, flotation, concentrate leach circuit versus grind, gravity, whole ore CIL; (4) gold recovery rates compared to grind size and leach conditions for the various rock types; and (5) the use of heap leaching of Livengood ores.

The comminution circuit is designed to process material with an average bond-work index 5% in excess of actual rock hardness based on the test work completed. Gold will be recovered through a traditional crusher, grinding, gravity and CIL circuit. Testwork included 99 variability tests.

Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

<b>Rock Type</b>	<b>Gold Recovery %</b>
RT4 Cambrian	84.2
RT5 Sunshine Upper Sediments	87.7
RT6 Upper Sediments	76.7
RT7 Lower Sediments-Bleached	58.5
RT9 Volcanics	84.8

Table of Contents

**Project Execution Risks**

Successful commercial production, if any, is subject to a number of risks, including successful construction of the designed facilities in the Feasibility Study. For other risks related to the Project, please see Item 1A, Risk Factors. Project risks include, but are not limited to, the following, which may have negative implications to both the execution schedule and project cost:

- The Project design requires excavation, processing, movement, placement, and preparation of a large quantity of soil, colluvium, alluvial material, and rock. There is a risk that the contractors and owner's crews and equipment may not be able to move this material as efficiently as estimated.
- The Project has a large surface footprint. While subsurface ground conditions have been investigated by drilling in support of this feasibility study, not all areas have been completely investigated. The actual subsurface ground conditions encountered during construction may be different than currently understood.
- The Project will require the surface preparation and placement of approximately 38 million square feet of LLDPE liner and other appurtenances at the tailings management facility during the two planned summer construction seasons available after construction start and prior to production. There is risk that the contractor may not be able to place the quantity of liner required in the time available.
- The Feasibility Study execution plan assumes an August 1 project release date, with mobilization to the site and construction to begin on October 1. This date was selected to conform to the optimum period for mobilization to the site and establishment of temporary support facilities prior to the onset of winter. This date also is optimum to allow full utilization of the entire winter season to pioneer construction activities at the various project facilities, all of which are located in permafrost terrain. The actual project release date is uncertain, given the combination of market variables and the multi-year permitting process that must be completed prior to a construction decision. There is a risk that a project release-date could be substantially different than August 1.

**Next Steps and Opportunities**

The Company believes that mill throughput and production schedule optimization studies may provide opportunities to reduce project capital costs. A lower mill throughput may offer an opportunity to enhance mill head grades in early years by a more aggressive stockpile management strategy than is assumed in the Feasibility Study.

The Company will also continue to advance environmental baseline work in support of future permitting in order to better position the Livengood Gold Project for a construction decision when warranted by market conditions.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

There is also opportunity to expand the mineable resource by increasing the in-pit resource, as additional drilling may improve the classification of the material contained within the pit. Additional drilling may expand the resource at depth and to the southwest, incorporating mineralized material below the current grade model. Multiple exploration targets have been identified and may increase the resource with additional exploration.

The Company has also identified several opportunities with the potential to improve the performance of the Project that warrant further study, including verification of preliminary indications of a higher head grade, verify modeling to improve recovery through intensive cyanide leach reactors, and reducing reagent consumption and energy costs.

Table of Contents**Results of Operations****Summary of Quarterly Results**

Description	December 31, 2013	September 30, 2013	June 30, 2013	March 31, 2013
Net loss	\$ (1,022,387)	\$ (4,124,761)	\$ (642,050)	\$ (4,063,282)
Basic and diluted net loss per common share	\$ (0.01)	\$ (0.04)	\$ (0.01)	\$ (0.04)

Net loss	\$ (7,258,397)	\$ (25,033,780)	\$ (12,909,320)	\$ (11,441,965)
----------	----------------	-----------------	-----------------	-----------------

**Results of Operations*****Year ended December 31, 2013 compared to Year ended December 31, 2012***

The Company had cash and cash equivalents of \$13,925,601 at December 31, 2013 compared to \$30,170,905 at December 31, 2012. The Company incurred a net loss of \$9,852,480 for the year ended December 31, 2013, compared to a net loss of \$56,643,462 for the year ended December 31, 2012. The following discussion highlights certain selected financial information and changes in operations between the year ended December 31, 2013 and the year ended December 31, 2012.

Mineral property exploration expenses for the year ended December 31, 2013 totaled \$8,188,995. During the year ended December 31, 2012 total mineral property exploration expenses were \$36,253,519 and the Company acquired mineral property assets of \$2,127,693. Mineral property expenses during 2013 were comprised of costs related to process engineering and metallurgical studies performed to support the completion and filing of the Feasibility Study and environmental baseline data gathering. Mineral property expenses incurred during 2012 were significantly higher due to geotechnical and condemnation drilling programs as well as an extensive metallurgical test program that took place in 2012. Mineral property expenses during 2012 were comprised of costs related to drilling for geotechnical investigations, environmental baseline data gathering, field costs and engineering in support of data development for completion of the Feasibility Study.

Share-based payment charges were \$3,564,273 during the year ended December 31, 2013 compared to \$9,206,975 during the year ended December 31, 2012. The decrease in share-based payment charges during the period was mainly the result of stock option grants to new employees and vesting of prior stock option grants during 2012. The Company granted 613,000 options during the year ended December 31, 2013 compared to 6,380,000 options during the year ended December 31, 2012. At December 31, 2013 there was unrecognized compensation expense of C\$822,458 related to non-vested options outstanding. The cost is expected to be recognized over a weighted-average remaining period of approximately 0.68 years.

Share based payment charges were allocated as follows:

<b>Expense category:</b>	<b>Year ended December 31, 2013</b>	<b>Year ended December 31, 2012</b>
Consulting	\$ 1,030,439	\$ 2,288,148
Investor relations	40,935	167,009
Professional fees		395
Wages and benefits	2,492,899	6,751,423
	<b>\$ 3,564,273</b>	<b>\$ 9,206,975</b>

Excluding share-based payment charges of \$2,492,899 and \$6,751,423, respectively, wages and benefits decreased to \$4,370,814 for the year ended December 31, 2013 from \$6,891,635 for the year ended December 31, 2012. No

Table of Contents

management bonuses were paid during the year ended December 2013 compared to bonuses of approximately \$830,000 paid in 2012. Also, a decrease in severance payments of approximately \$400,000 from 2012 to 2013 along with decreased personnel during the year ended December 31, 2013 contributed to lower wages and benefits expenses.

Excluding share-based payment charges of \$1,030,439 and \$2,288,148, respectively, consulting fees decreased to \$314,139 for the year ended December 31, 2013 from \$1,022,277 for the year ended December 31, 2012. Consulting fees to the former interim Chief Executive Officer were approximately \$40,000 during the year ended December 31, 2013 compared to approximately \$390,000 during the year ended December 31, 2012. Additionally, combined decreases in directors fees, recruiting fees and compensation consulting fees amounted to approximately \$200,000 during the year ended 2013.

Professional fees decreased by \$145,546 during the year ended December 31, 2013 due to additional legal fees incurred during the year ended December 31, 2012 related to the review and development of compensation plans.

All other operating expense categories reflected only moderate change period over period.

Other items amounted to income of \$8,322,291 during the year ended December 31, 2013 compared to a loss of \$1,058,082 in the year ended December 31, 2012. The income amount in 2013 resulted from the unrealized gain on the revaluation of the derivative liability of \$7,600,000 for the year ended December 31, 2013. This unrealized gain was caused by the decrease in the price per ounce of gold during 2013 which is used to value the derivative liability. In addition to the unrealized gain on the derivative liability, the Company had a foreign exchange gain of \$917,301 during the year ended December 31, 2013 compared to a gain of \$68,113 during the year ended December 31, 2012 as a result of the impact on the Company's US dollar cash balances of an increase in the value of the Canadian dollar compared to the US dollar.

The increase in other income was partially offset by a loss of \$298,769 related to the other than temporary impairment of certain available-for-sale securities during the year ended December 31, 2013. The available-for-sale securities were deemed to be other than temporarily impaired based on the fair market value of the securities combined with a continued lack of liquidity. Income of \$290,552 from mineral property earn-in was recognized during the year ended December 31, 2012 which was related to the Terra and Chisna properties transferred to Corvus Gold Inc. in 2010 compared to no mineral property earn-in income for the year ended December 31, 2013. Interest income during the year ended December 31, 2013 was lower than during the year ended December 31, 2012 by approximately \$80,000 due to lower cash balances in 2013.

***Year ended December 31, 2012 compared to the Seven Months ended December 31, 2011***

Due to the Company changing its fiscal year end to December 31 from May 31 during 2011, the Company's results and activity may not be comparable between fiscal years ended December 31, 2012 and 2011. The following discussion highlights certain selected financial information and changes in operations between the year ended December 31, 2012 and the seven-month period ended December 31, 2011.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

The Company had cash and cash equivalents of \$30,170,905 at December 31, 2012 compared to \$54,712,073 at December 31, 2011. The Company incurred a net loss of \$56,643,462 for the year ended December 31, 2012, compared to a net loss of \$43,309,957 for the seven-month period ended December 31, 2011.

Share-based payment charges were \$9,206,975 during the year ended December 31, 2012 compared to \$7,645,269 for the seven-month period ended December 31, 2011. The increase in share-based payment charges during the period was mainly the result of stock option grants to new employees and vesting of prior stock option grants. The Company granted 6,380,000 options during the year ended December 31, 2012 compared to 2,700,000 options during the seven months ended December 31, 2011.

Table of Contents

Share based payment charges were allocated as follows:

<b>Expense category:</b>	<b>Year ended December 31, 2012</b>	<b>Seven months ended December 31, 2011</b>
Consulting	\$ 2,288,148	\$ 1,503,919
Investor relations	167,009	71,043
Professional fees	395	18,945
Wages and benefits	6,751,423	6,051,362
	<b>\$ 9,206,975</b>	<b>\$ 7,645,269</b>

Mineral property exploration expenses for the year ended December 31, 2012 totaled \$36,253,519 while the Company acquired \$2,127,693 in mineral property assets. During the seven-month period ended December 31, 2011 total mineral property exploration expenses were \$32,550,518 and the Company acquired mineral property assets of \$47,708,647. Mineral property expenses during 2012 were comprised of costs related to drilling for geotechnical investigations, environmental baseline data gathering, field costs and engineering. Similar exploration activities took place in 2011.

In December 2011, the Company completed a transaction to acquire certain mining claims and related rights in the vicinity of the Livengood Gold Project. This acquisition included both mining claims and all of the shares of Livengood Placers, Inc. (a Nevada corporation). These assets were purchased for aggregate consideration of \$36,600,000 allocated between cash consideration of \$13,500,000 and a derivative liability with an estimated fair value of \$23,100,000. The derivative liability is a contingent payment based on the Average Gold Price from the date of the acquisition. The derivative liability (payable in December 2016) will equal \$23,148 for every dollar that the Average Gold Price exceeds \$720 per troy ounce. If the Average Gold Price is less than \$720, there will be no additional contingent payment. The subject ground was previously vacant or was used for placer gold mining.

Also in December 2011, the Company exercised its option to acquire all the interests in the 169 State of Alaska claims previously held under a separate lease. The Company paid total cash consideration of \$11,044,000 for the acquisition of these State of Alaska mining claims that had an original term of ten years, commencing on September 11, 2006.

Excluding share-based payment charges of \$6,751,423 and \$6,051,362, respectively, wages and benefits for the year ended December 31, 2012 increased to \$6,891,635 from \$3,948,874 for the seven-month period ended December 31, 2011 as a result of certain severance payments along with increased personnel and hiring of new officers.

Excluding share-based payment charges of \$2,288,148 and \$1,503,919, respectively, consulting fees for the year ended December 31, 2012 increased to \$1,022,277 from \$307,085 for the seven-month period ended December 31, 2011 as a result of a consulting agreement with the former interim Chief Executive Officer and increased directors fees.

Insurance expense increased during the year ended December 31, 2012 as a result of additional Directors and Officers insurance with the hiring of new executives and appointment of new directors during 2011 and 2012. Aside from the impact of share-based payment charges, most other expense categories reflected only moderate change period over period.

Other items amounted to a loss of \$1,058,082 during the year ended December 31, 2012 compared to a gain of \$2,815,860 in the seven-month period ended December 31, 2011. The loss in 2012 resulted from the unrealized loss on revaluation of the derivative liability of \$1,600,000 at December 31, 2012. Offsetting the loss on derivative were interest income on cash and cash equivalents of \$183,253 and income from mineral property facilitation agreements of \$290,552. During the seven-month period ended December 31, 2011, the Company had an unrealized gain on derivative liability of \$2,300,000. In addition, interest income totaled \$592,038. Interest income during the seven months ended December 31, 2011 was higher than during the year ended December 31, 2012 due to higher interest rates and cash balances in 2011.

Table of Contents***Seven Months ended December 31, 2011 compared to the year ended May 31, 2011***

Due to the Company changing its fiscal year end to December 31 from May 31 during 2011, the Company's results and activity may not be comparable between the seven-month period ended December 31, 2011 and the fiscal year ended May 31, 2011. The following discussion highlights certain selected financial information and changes in operations between the seven-month period ended December 31, 2011 and the year ended May 31, 2011.

The Company had cash and cash equivalents of \$54,712,073 at December 31, 2011 compared to \$114,766,876 at May 31, 2011. The Company incurred a net loss of \$43,309,957 for the seven-month period ended December 31, 2011, compared to a net loss of \$48,459,785 for the year ended May 31, 2011. Net loss for the year ended May 31, 2011 included loss from discontinued operations of \$1,037,912 as discussed below. Share-based payment charges were \$7,645,269 during the seven-month period ended December 31, 2011 compared to \$3,450,477 for the year ended May 31, 2011. The increase in share-based payment charges during the period ended December 31, 2011 was mainly the result of increased stock option grants at a higher weighted average exercise price and vesting of prior stock option grants. The Company granted 2,700,000 options during the period ended December 31, 2011 compared to 1,760,000 options during the year ended May 31, 2011.

Share based payment charges were allocated as follows:

Expense category:	Seven months	Year ended
	ended December 31, 2011	May 31, 2011
Consulting	\$ 1,503,919	\$ 975,460
Investor relations	71,043	441,479
Professional fees	18,945	72,921
Wages and benefits	6,051,362	1,960,617
	\$ 7,645,269	\$ 3,450,477

During the seven-month period ended December 31, 2011 total mineral property exploration expenses were \$32,550,518 and the Company acquired mineral property assets of \$47,708,647. Mineral property exploration expenses for the year ended May 31, 2011 totaled \$37,749,156 while the Company acquired approximately \$30,000 in mineral property assets. Mineral property expenses during the period ended December 31, 2011 were comprised of costs related to drilling, environmental baseline data gathering, field costs and engineering. During the year ended May 31, 2011 mineral property expenses were comprised of drilling, field costs, geological/geophysical, assay work and land maintenance in preparation for an anticipated pre-feasibility study.

Excluding share-based payment charges of \$6,051,362 during the period ended December 31, 2011 and \$1,960,617 during the year ended May 31, 2011, wages and benefits for the period ended December 31, 2011 increased to \$3,948,874 from \$3,506,836 during the year ended May 31, 2011 as a result of certain severance payments along with increased personnel and hiring of new officers during the period.

Excluding share-based payments, investor relations expense decreased to \$252,348 during the period ended December 31, 2011 compared to \$789,145 during the year ended May 31, 2011. Additional expense in the year ended May 31, 2011 was incurred related to increased travelling and marketing related to the Company's spin-out of the Corvus properties as discussed below.

Aside from the impact of share-based payment charges, most other expense categories reflected only moderate change period over period.

Other items amounted to a gain of \$2,815,860 during the period ended December 31, 2011 compared to a gain of \$480,901 in year ended May 31, 2011. The increased gain in the period ended December 31, 2011 resulted from an unrealized gain of \$2,300,000 on the revaluation of a derivative liability at December 31, 2011. There was no derivative liability during the year ended May 31, 2011.

Table of Contents**Discontinued Operations and Transfer of the Nevada and Other Alaska Business under the Arrangement**

On August 26, 2010, the Company completed an arrangement under a Plan of Arrangement (the Arrangement) pursuant to which it transferred its other existing Alaska (other than the Livengood Gold Project) and Nevada assets to a new public company, Corvus.

Under the Arrangement, each shareholder of the Company received one Corvus common share for every two ITH common shares held as at the effective date of the Arrangement as a return of capital and exchanged each existing common share of ITH for a new common share of ITH. The new ITH common shares are identical in every respect (other than CUSIP number) to the old ITH common shares. ITH has transferred its wholly-owned subsidiaries, Raven Gold Alaska Inc. (Raven Gold), incorporated in Alaska, and Corvus Gold Nevada Inc. (formerly Talon Gold Nevada Inc.), incorporated in Nevada to Corvus. As a result of the Arrangement, there was an effective spin-out by ITH of certain of its mineral properties, being Chisna, West Pogo, Terra and LMS in Alaska, and North Bullfrog in Nevada (together the Nevada and Other Alaska Business), to Corvus.

The Company did not realize any gain or loss on the transfer of the Nevada and Other Alaska Business, which was comprised of a working capital contribution of \$3,168,825 and the Nevada and Other Alaska Business assets and liabilities as at the effective date of the Arrangement. Costs of the Arrangement, comprised principally of legal and regulatory expense, off-set by property facilitation payments and interest from payments made in connection with the Chisna spin-out property, amounted to a net expense of \$148,940 and \$496,638 during the fiscal years ended December 31, 2011 and May 31, 2011, respectively.

The Arrangement was approved by a favorable vote of ITH's shareholders at a special meeting held on August 12, 2010.

The following table shows the results related to discontinued operations for the year ended May 31, 2011.

	<b>May 31, 2011</b>
Consulting fees	255,159
Foreign exchange (gain) loss	(19,510)
Insurance	9,698
Investor relations	125,540
Mineral property exploration	140,888
Office	6,927
Other	9,508
Professional fees	39,122
Regulatory	3,664
Rent	5,091
Travel	5,401
Wages and benefits	456,424
Loss from discontinued operations	\$ 1,037,912

The transfer of the assets is summarized in the table below:

Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

	<b>August 25, 2010</b>
Cash and cash equivalents	\$ 1,128,158
Accounts receivable	187
Prepaid expenses	3,000
Mineral Properties	3,590,657
Accounts payable	(725,012)
Net assets transferred to Corvus	\$ 3,996,990

Table of Contents

**Liquidity and Capital Resources**

The Company has no revenue generating operations from which it can internally generate funds. To date, the Company's ongoing operations have been predominantly financed through sale of its equity securities by way of private placements and the subsequent exercise of share purchase and broker warrants and options issued in connection with such private placements. However, the exercise of warrants/options is dependent primarily on the market price and overall market liquidity of the Company's securities at or near the expiry date of such warrants/options (over which the Company has no control) and therefore there can be no guarantee that any existing warrants/options will be exercised.

As at December 31, 2013, the Company reported cash and cash equivalents of \$13,925,601 compared to \$30,170,905 at December 31, 2012. The decrease of approximately \$16.2 million resulted mainly from expenditures on the Livengood Gold Project for completion of the Feasibility Study. The Company continues to utilize its cash resources to fund the Livengood Gold Project environmental activities required for preservation of baseline database and future permitting, feasibility study recommendations, including related mine planning and other project improvements, as well as corporate administrative requirements.

Investing activities during the year ended December 31, 2013 comprised solely the increase in restricted cash related to cash in escrow for land acquisitions closed during January 2014. Investing activities during the year ended December 31, 2012 comprised primarily of mineral property acquisitions of \$2,127,693. Mineral property acquisitions during 2012 related to certain mining claims and related rights in the vicinity of the Livengood Gold Project.

The Company had no cash flows from financing activities during the year ended December 31, 2013. Financing activities provided \$29,214,249 during the year ended December 31, 2012 on the issuance of common shares through a non-brokered private placement. During the third quarter of 2012, the Company closed a non-brokered private placement financing through the issuance of 11,384,719 common shares. The shares were issued in two stages. The first stage closed on August 3, 2012 and consisted of 9,458,308 common shares issued at C\$2.60 per share for gross proceeds of \$24,626,029. The second stage of the offering closed on September 17, 2012 and consisted of 1,926,411 common shares issued at C\$2.5955 per share for gross proceeds of \$5,142,500. The Company paid a cash finder's fee of 4% of gross proceeds in connection with C\$10,000,000 of the total offering. Total share issuance costs for this non-brokered private placement financing amounted to \$554,280.

As at December 31, 2013, the Company had working capital of \$12,699,227 compared to working capital of \$27,676,797 at December 31, 2012. The Company expects that it will operate at a loss for the foreseeable future, but believes the current cash and cash equivalents will be sufficient for it to complete the non-discretionary activities at the Livengood Gold Project and its currently anticipated general and administrative costs, through the 2014 fiscal year and well into 2015. To advance the Livengood Gold Project towards permitting and development, the Company anticipates maintaining certain essential development activities for the fiscal year ending December 31, 2014. These essential activities include maintaining environmental baseline data that in its absence could materially delay future permitting of the Livengood Gold Project. The Company anticipates reducing its annual spending to approximately \$8 million during fiscal year 2014 to maintain the environmental baseline activity, review opportunities, including those identified in the Feasibility Study and those subsequently developed by the Company, as well as perform required general and administrative duties. As part of the Company's reduced spending plan, ITH reduced its full-time staff by approximately 30% effective January 1, 2014.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

The Company will require significant additional financing to continue its operations (including general and administrative expenses) in connection with post-Feasibility Study activities at the Livengood Gold Project and the development of any mine that may be determined to be built at the Livengood Gold Project, and there is no assurance that the Company will be able to obtain the additional financing required on acceptable terms, if at all. In addition, any significant delays in the issuance of required permits for the ongoing work at the Livengood Gold Project, or unexpected results in connection with the ongoing work, could result in the Company being required to raise additional funds to advance permitting efforts. The Company's review of its financing options includes pursuing a future strategic alliance to assist in further development, permitting and future construction costs.

Despite the Company's success to date in raising significant equity financing to fund its operations, there is

Table of Contents

significant uncertainty that the Company will be able to secure any additional financing in the current or future equity markets. See Risk Factors

We will require additional financing to fund exploration and, if warranted, development and production. Failure to obtain additional financing could have a material adverse effect on our financial condition and results of operation and could cast uncertainty on our ability to continue as a going concern. The quantity of funds to be raised and the terms of any proposed equity financing that may be undertaken will be negotiated by management as opportunities to raise funds arise. Specific plans related to the use of proceeds will be devised once financing has been completed and management knows what funds will be available for these purposes. Due to this uncertainty, if the Company is unable to secure additional financing, it may be required to reduce all discretionary activities at Livengood to preserve its working capital to fund anticipated non-discretionary expenditures beyond the 2014 fiscal year.

Other than cash held by its subsidiaries for their immediate operating needs in Alaska and Colorado, all of the Company's cash reserves are on deposit with a major Canadian chartered bank. The Company does not believe that the credit, liquidity or market risks with respect thereto have increased as a result of the current market conditions. However, to achieve greater security for the preservation of its capital, the Company has, of necessity, been required to accept lower rates of interest which has also lowered its potential interest income.

**Contractual Obligations and Commitments**

The following table discloses, as of December 31, 2013, the Company's contractual obligations including anticipated mineral property payments and work commitments and committed office and equipment lease obligations. Under the terms of the Company's mineral property purchase agreements, mineral leases and the terms of the unpatented mineral claims held by it, the Company is required to make certain scheduled acquisition payments, incur certain levels of expenditures, make lease or advance royalty payments, make payments to government authorities and incur assessment work expenditures as summarized in the table below in order to maintain and preserve the Company's interests in the related mineral properties. If the Company is unable or unwilling to make any such payments or incur any such expenditures, it is likely that the Company would lose or forfeit its rights to acquire or hold the related mineral properties. The following table assumes that the Company retains the rights to all of its current mineral properties, but no other lease purchase or royalty buyout options:

	Payments Due by Year						Total
	2014	2015	2016	2017	2018	2019 and beyond	
Livengood Property Purchase(1)	\$	\$	\$14,800,000	\$	\$	\$	\$14,800,000
Mineral Property Leases(2)	401,236	405,979	410,794	415,681	425,641	430,676	2,490,007
Mining Claim Government Fees	89,110	89,110	89,110	89,110	89,110	89,110	534,660
Office and Equipment Lease Obligations	226,727	78,597					305,324
<b>Total</b>	<b>\$717,073</b>	<b>\$573,686</b>	<b>\$15,299,904</b>	<b>\$504,791</b>	<b>\$514,751</b>	<b>\$519,786</b>	<b>\$18,129,991</b>

(1) The amount payable in December 2016 of \$14,800,000 represents the fair value of the Company's derivative liability as at December 31, 2013 and will be revalued at each subsequent reporting period.

(2) Does not include required work expenditures, as it is assumed that the required expenditure level is significantly below the work for which will actually be carried out by the Company. Does not include potential royalties that may be payable (other than annual minimum royalty payments).

**Off-Balance Sheet Arrangements**

The Company does not have any off balance sheet arrangements.

Table of Contents

**Critical Accounting Policies**

*Mineral properties and exploration and evaluation expenditures*

The Company's mineral project is currently in the exploration and evaluation phase. Mineral property acquisition costs are capitalized when incurred. Mineral property exploration costs are expensed as incurred. At such time that the Company determines that a mineral property can be economically developed, subsequent mineral property expenses will be capitalized during the development of such property.

The Company assesses interests in exploration properties for impairment when facts and circumstances suggest that the carrying amount of an asset may exceed its recoverable amount. Impairment analysis includes assessment of the following circumstances: a significant decrease in the market price of a long-lived asset or asset group; a significant adverse change in the extent or manner in which a long-lived asset or asset group is being used or in its physical condition; a significant adverse change in legal factors or in the business climate that could affect the value of a long-lived asset or asset group, including an adverse action or assessment by a regulator; an accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of a long-lived asset or asset group; a current-period operating or cash flow loss combined with a history of operating or cash flow losses or a projection or forecast that demonstrates continuing losses associated with the use of a long-lived asset or asset group; a current expectation that, more likely than not, a long-lived asset or asset group will be sold or otherwise disposed of significantly before the end of its previously estimated useful life. The term more likely than not refers to a level of likelihood that is more than 50%.

The Company's assessment of impairment related to its capitalized acquisition costs at December 31, 2013 was based on estimated undiscounted future cash flows expected to result from the use and eventual disposition of these assets. The assessment took into account the Company's expectation for the price of gold as well as the probability of achieving certain opportunities to enhance the economics of the Livengood Gold Project as set out in the Company's Feasibility Study issued in September 2013. Based on this assessment, no impairments were recorded at December 31, 2013.

*Derivative*

Derivative financial liabilities include the Company's future contingent payment valued using estimated future gold prices. Derivatives are initially recognized at their fair value on the date the derivative contract is entered into and are subsequently re-measured at their fair value at each reporting period with changes in the fair value recognized in profit and loss.

*Stock-based compensation*

The Company follows the provisions of Financial Accounting Standards Board (FASB) Accounting Standards Codification Section 718 Compensation - Stock Compensation, which establishes accounting for equity based compensation awards to be accounted for using the fair value method. The Company uses the Black-Scholes option pricing model to determine the grant date fair value of the awards. Compensation expense is measured at the grant date and recognized over the requisite service period, which is generally the vesting period.

**Recently Issued Accounting Pronouncements**

In July 2013, FASB issued Accounting Standards Update No. 2013-11, Income Taxes (Topic 740) - Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists (ASU 2013-11). ASU 2013-11 clarifies guidance and eliminates diversity in practice on the presentation of unrecognized tax benefits when a net operating loss carryforward, a similar tax loss, or a tax credit carryforward exists at the reporting date. This new guidance is effective on a prospective basis for fiscal years and interim reporting periods within those years, beginning after December 15, 2013. The adoption of ASU 2013-11 is not expected to have a material impact on our financial position, results of operations or cash flows.

Table of Contents

**Non-GAAP Financial Measures**

Non-GAAP financial measures are not defined under GAAP and are provided as additional information and should not be considered in isolation or as a substitute for other financial measures prepared in accordance with GAAP.

*All-in Sustaining Cost of Production*

All-in sustaining costs of production are non-GAAP financial measures. This measure includes operating costs, including royalties and refining and transportation costs, reclamation and remediation costs, and initial capital and sustaining capital costs related to the Livengood Gold Project as outlined in the Feasibility Study results. All-in sustaining cost measures are provided to assist management, investors and analysts with information with which to compare to other companies. All-in sustaining costs are intended to provide additional information and should not be considered in isolation or as a substitute for other financial measures prepared in accordance with GAAP. The all-in sustaining cost of production calculations were prepared using guidance released by the World Gold Council in June 2013.

Table of Contents

**ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK.**

The Company has exposure to market risk in areas of interest rate risk, foreign currency exchange rate risk, and other price risk.

***Interest Rate Risk***

Interest rate risk consists of the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Company's cash and cash equivalents consists of cash and cash equivalents held in bank accounts and short term deposit certificates or Guaranteed Investment Certificates with a major Canadian financial institutions that earn interest at variable interest rates. Future cash flows from interest income on cash and cash equivalents will be affected by interest rate fluctuations. Due to the short-term nature of these financial instruments, fluctuations in market rates do not have a significant impact on estimated fair values.

At December 31, 2013, the Company held a total of \$12,626,938 cash equivalents which consist of interest saving accounts and Guaranteed Investment Certificates.

The Company manages interest rate risk by maintaining an investment policy that focuses primarily on preservation of capital and liquidity. The Company's sensitivity analysis suggests that a 0.5% change in interest rates would affect interest income by approximately \$65,000.

***Foreign Currency Risk***

The Company is exposed to foreign currency risk to the extent that certain monetary financial instruments and other assets are denominated in Canadian dollars. As the majority of the Company's assets, aside from cash, are denominated in US dollars, currency risk is limited to those Canadian cash balances. The Company has not entered into any foreign currency contracts to mitigate this risk. The Company's sensitivity analysis suggests that a consistent 5% change in the absolute rate of exchange for the Canadian dollar would affect net assets by approximately \$250,000. Furthermore, depending on the amount of cash held by the Company in Canadian dollars at the end of each reporting period using the period end exchange rate, significant changes in the exchange rates could cause significant changes to the currency translation amounts recorded to accumulated other comprehensive income.

As at December 31, 2013, USD amounts were converted at a rate of C\$1 to US \$0.9402.

***Credit Risk***

Concentration of credit risk exists with respect to the Company's Canadian cash and cash equivalents as all amounts are held at two major Canadian financial institutions. Credit risk with regard to cash held in the United States is mitigated as the amount held in the United States is only sufficient to cover short-term requirements. With respect to receivables at December 31, 2013, the Company is

not exposed to significant credit risk as the receivables are principally interest accruals.

***Other Price Risk***

Other price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices, other than those arising from interest rate risk or foreign exchange risk. The Company's investment in marketable securities is exposed to such risk. The Company's derivative liability, which consists of a future contingent payment valued using estimated future gold prices, is also exposed to other price risk. See Note 6 of the notes to consolidated financial statements included elsewhere in this Annual Report on Form 10-K. The fair value of this liability will fluctuate with the average daily price of gold as well as with future projections for the average price of gold over the life of the obligation. For every dollar change in the average daily price of gold, the value of the derivative liability will change by \$23,148.

**ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA.**

**Report of Independent Registered Public Accounting Firm**

**To the Shareholders of International Tower Hill Mines Ltd.**

We have completed integrated audits of International Tower Hill Mines Ltd. s December 31, 2013 and December 31, 2012 consolidated financial statements and its internal control over financial reporting as at December 31, 2013. Our opinions, based on our audits are presented below.

**Report on the consolidated financial statements**

We have audited the accompanying consolidated financial statements of International Tower Hill Mines Ltd., which comprise the consolidated balance sheets as at December 31, 2013 and December 31, 2012 and the consolidated statements of operations and comprehensive loss, changes in shareholders' equity and cash flow for each of the two years in the period ended December 31, 2013 and cumulatively for the period from January 1, 2012 to December 31, 2013, and the related notes, which comprise a summary of significant accounting policies and other explanatory information.

**Management s responsibility for the consolidated financial statements**

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America and for such internal control as management determines is necessary to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to fraud or error.

**Auditor s responsibility**

Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We conducted our audits in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement. Canadian generally accepted auditing standards also require that we comply with ethical requirements.

## Edgar Filing: INTERNATIONAL TOWER HILL MINES LTD - Form 10-K

An audit involves performing procedures to obtain audit evidence, on a test basis, about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the company's preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes evaluating the appropriateness of accounting principles and policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained in our audits is sufficient and appropriate to provide a basis for our audit opinion on the consolidated financial statements.

### **Opinion**

In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of International Tower Hill Mines Ltd. as at December 31, 2013 and December 31, 2012 and its financial performance and its cash flows for each of the two years in the period ended December 31, 2013 and cumulatively for the period from January 1, 2012 to December 31, 2013 in accordance with accounting principles generally accepted in the United States of America.

### **Other matters**

We did not audit the cumulative statements of operations and comprehensive loss, changes in shareholders' equity and cash flows for the period from June 1, 1997 (date of inception) to December 31, 2011. These statements were audited by other auditors who expressed unqualified opinions on the cumulative amounts.

Table of Contents

**Report on internal control over financial reporting**

We have also audited International Tower Hill Mines Ltd. s internal control over financial reporting as at December 31, 2013, based on criteria established in Internal Control - Integrated Framework (1992), issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

**Management s responsibility for internal control over financial reporting**

Management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Managements Report on Internal Control over Financial Reporting.

**Auditor s responsibility**

Our responsibility is to express an opinion on the company s internal control over financial reporting based on our audit. We conducted our audit of internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects.

An audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control, based on the assessed risk, and performing such other procedures as we consider necessary in the circumstances.

We believe that our audit provides a reasonable basis for our audit opinion on the company s internal control over financial reporting.

**Definition of internal control over financial reporting**

A company s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company s internal control over financial reporting includes those policies and procedures that: (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company s assets that could have a material effect on the financial statements.

**Inherent limitations**

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

**Opinion**

In our opinion, International Tower Hill Mines Ltd. maintained, in all material respects, effective internal control over financial reporting as at December 31, 2013, based on criteria established in Internal Control - Integrated Framework (1992) issued by COSO.

Table of Contents

**Report of Independent Registered Public Accounting Firm**

To the Shareholders of

International Tower Hill Mines Ltd.

We have audited the accompanying consolidated statements of operations and comprehensive loss, changes in shareholders' equity, and cash flows of International Tower Hill Mines Ltd. (the Company) for the period ended December 31, 2011 and for the period June 1, 1997 (date of inception) to December 31, 2011. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards and the standards of the Public Company Accounting Oversight Board (US). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

In our opinion, the consolidated financial statements present fairly, in all material respects, the results of International Tower Hill Mines Ltd. operations and their cash flows for the period ended December 31, 2011 and for the period June 1, 1997 (date of inception) to December 31, 2011 in conformity with accounting principles generally accepted in the United States of America.

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. Without modifying our opinion, we draw attention to Note 1 that states the Company has no source of revenue, and has significant cash requirements that raise substantial doubt about its ability to continue as a going concern. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

/s/ MacKay LLP
