 - o Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))
-

ITEM 8.01 Other Events.

PetroLogistics LP (the Partnership) announced today that it plans to temporarily bring down its propane dehydrogenation facility to repair a water coil leak in the waste heat boiler and to perform certain other maintenance activities, including cleaning certain of the facility's heat exchangers. The outage will occur in June but the actual timing is dependent on the status of the leak. Management believes that the downtime will last approximately five to seven days; however, at this time management cannot provide assurances as to the exact amount of time for repairs and maintenance. The Partnership will declare a force majeure event under its propylene sales contracts with respect to the water coil leak. Based upon the Partnership's propylene production to date and the current estimate of downtime, management estimates that total propylene production for the quarter ending June 30, 2014 will be in the range of 285 million to 300 million pounds.

SIGNATURES
