McCreedy West Mine Generates \$4.7 Million

Cash Operating Margin in Q2

TORONTO, ONTARIO July 29, 2004. **FNX Mining Company Inc. (FNX-TSX/AMEX)** reports second quarter cash operating margin (revenue less cash operating costs) from Phase 1 Production at the McCreedy West Mine of \$4.7 million (\$62/ton) from revenue of \$13.6 million (\$179/ton) and cash operating costs of \$8.9 million (\$117/ton). The cash operating margin for the first six months of commercial operations (Q1 and Q2) totaled \$9.7 million (\$84/ton) from revenues of \$23.1 million and cash operating costs of \$13.4 million.

Second quarter earnings after taxes are \$178,000 or \$0.00 per share compared to a loss of \$1.5 million or \$0.04 per share in the same period of 2003. Earnings for the first and second quarter of 2004 are \$1.5 million or \$0.03 per share. Provision for a non-cash tax expense of \$467,000 was recognized in the second quarter and reduced the after tax earnings by \$0.01 per share. This brings the Q1 and Q2 non-cash tax expense total to \$1.4 million and a reduction in after tax earnings of \$0.03 per share. The Company does not expect to pay taxes this year and not until all previous tax losses have been exhausted.

The Q2-2004 results represent the Company's second reporting period of commercial production from the Phase 1 Mining operations at its 75%-owned McCreedy West Mine located in the Sudbury mining camp, Ontario, Canada. The Company accounts for its Sudbury operations on a 100% consolidated basis, with the remaining 25% ownership

accounted for as a minority interest.

Second Quarter Highlights

- Mined 153,093 tons of ore in the **first six calendar months** of 2004, over half of the 2004 McCreedy West production target of 300,000 tons.
 - Shipped 143,162 tons of ore to the custom mill during the **first six calendar months** of 2004 containing an estimated 3.2 million pounds of recovered nickel and 1.1 million pounds of recovered copper.
 - The cash cost per pound of nickel net of by-products credits was higher in the second quarter compared to the first quarter primarily due to lower grades and commodity prices and less Cu-PGM ore being mined (5% of total production). The cash cost per pound of nickel shipped was US\$3.45 for the second quarter and US\$3.16 for the first and second quarter. This was offset by increased production.
 - Feasibility studies were advanced at the Levack Mine (Phase 2 Production) and at the McCreedy West PM Deposit (Phase 3 Production).
 - Initiated \$30 million underground advanced exploration program at the Norman 2000 and North Deposits leading to the Company's third feasibility study on its Sudbury properties and potentially Phase 4 Production.
 - Issued 2.5 million flow-through shares for net cash proceeds of \$19.5 million.
 - Closing cash of \$61.9 million with no debt and working capital of \$72.7 million.
 - Completed construction of new building containing crusher facilities at McCreedy West Mine to allow up to 24/7 surface operations.
-

Note: Currencies are in Canadian dollars unless indicated otherwise. All production numbers are 100% of operations. Cash operating costs, cash operating margins and cash costs per pound are non-GAAP measures. Cash operating costs represent the economic marginal cost to produce a given unit of output and cash operating margin is the difference between revenue and cash operating costs.

The Second Quarter report is for the reporting period April-May-June and for the production period February-March-April. Revenues and costs are accounted for and reported with a two month delay.
