TRAFFIC AND CAPACITY STATISTICS FEBRUARY 2004

- # Passenger load factor increased by 3.2 percentage points to 80.4 percent**
- # Intercontinental business class traffic increased 7 percent**
- # Cargo load factor increased by 2 percentage points to 75.5 percent**
- # Cargo traffic on Asia/Pacific increased 32 percent on introduction of third B747-400ERF**

Please note that capacity and traffic figures are positively influenced by approximately 3.5% in comparison with February 2003, because calendar year 2004 is a leap year.

Passenger Traffic

February passenger traffic increased by 5 percent, whereas capacity was at the same level as last year. As a result, passenger load factor improved by 3.2 percentage points to 80.4 percent. Intercontinental business class traffic increased by 7 percent (on 3 percent higher capacity).

European traffic was 6 percent above last year's level on 3 percent higher capacity, reflecting the initial results of the successful price actions on this route area. Load factor increased by 1.5 percent to 71.6 percent.

Traffic on the African routes increased by 16 percent year-on-year. As capacity was up 13 percent, load factor improved 2.3 percentage points to 84.0 percent. Especially the deployment of the Boeing 777-200ER on Nairobi (Kenya) and Capetown (South Africa) contributed to this strong performance.

Traffic on the Central and South Atlantic route area increased 7 percent on 1 percent lower capacity. Load factor increased 6.9 percentage points to 87.2 percent. The improved performance on this route area is because of network optimization and an increase in demand.

The strong improvement in load factor on the North Atlantic and the Middle East/South Asia route area in part relates to the lower traffic numbers of last year when tension in the Middle East was increasing.

Cargo Traffic

In February, cargo traffic increased by 11 percent compared to last year on 8 percent higher capacity, helped by the introduction of the third B747-400ER Freighter. Cargo load factor improved by 2.0 percentage points to 75.5 percent.

Performance on the Asia Pacific routes continued to show a significant year-on-year improvement with traffic up 32 percent on 24 percent higher capacity mainly because of the third freighter. Load factor on this route area increased by 4.8 percentage points to 85.3 percent.

On the North Atlantic traffic and capacity decreased by 7 percent. This resulted in a load factor of 74.3 percent, which is virtually at the same level as last year.

Cargo traffic outbound Europe continues to be under pressure.
