SAIFUN AND TOWER SIGN EXPANDED LICENSING AGREEMENT

Edgar Filing: TOWER SEMICONDUCTOR LTD - Form 6-K

NETANYA AND MIDGAL HAEMEK, ISRAEL, SEPTEMBER 12, 2006 - Saifun Semiconductors Ltd. (Nasdaq: SFUN) and Tower Semiconductor Ltd. (Nasdaq: TSEM; TASE: TSEM) today announced that the two companies have signed a new agreement whereby Saifun extends the license of the Saifun NROM(R) technology to Tower for the manufacture of Embedded Flash and Embedded EEPROM products.

Tower is currently offering its customers a wide variety of qualified NROM-based embedded-Flash modules under the microFLASH(R) brand name. The microFLASH(R) embedded modules are manufactured on Tower's 0.18 micron process in various densities and speeds and optimized for integration into various embedded microcontroller applications, as well as wireless connectivity, smart card and security applications. Under the terms of the new agreement, Tower may also offer NROM-based embedded-Flash modules on further advanced process generations.

Commenting on the agreement, Russell Ellwanger, Chief Executive Officer of Tower said, "Saifun's NROM technology has a proven track record with Tower and other leading manufacturers in a broad span of process geometries. It enables us to produce high-density embedded products with a favorable cost/performance ratio. These and other inherent advantages enable Tower to keep bringing competitive memory modules to the market while further expanding our position in the NVM space."

"We are pleased to extend our ten-year relationship with Tower," added Dr. Boaz Eitan, Chief Executive Officer of Saifun. "Tower was the first licensee of NROM in 1997, and the first to introduce NROM-based products into the Code Flash market. Since that time, other manufacturers have licensed our NROM technology for embedded applications, including global technology leaders such as Sony and Panasonic. With the embedded-memory market expected to grow substantially in the coming years, from a \$3.3B in 2005 to a projected \$6.3B in 2010, Tower's customers will continue to benefit from the embedded microFLASH(R) modules offered."

ABOUT SAIFUN SEMICONDUCTORS LTD.

Saifun is a provider of intellectual property (IP) solutions for the non-volatile memory (NVM) market. The company's innovative Saifun NROM(R) technology allows semiconductor manufacturers to deliver high performance, reliable products at a lower cost per megabit, with greater storage capacity, using a single process for all NVM applications. Saifun licenses its IP to semiconductor manufacturers who use this technology to develop and manufacture a variety of stand-alone and embedded NVM products. These include Flash memory for the telecommunications, consumer electronic, networking and automotive markets. The companies currently licensing Saifun NROM technology are Infineon Technologies, Macronix International, Matsushita Electric Industrial, Semiconductor Manufacturing International Corporation, Sony Corporation, Spansion, and Tower Semiconductors.

ABOUT TOWER SEMICONDUCTOR LTD.

Tower Semiconductor Ltd. is a pure-play independent wafer foundry established in 1993. The company manufactures integrated circuits with geometries ranging from 1.0 to 0.13 micron; it also provides complementary technical services and design support. In addition to digital CMOS process technology, Tower offers advanced embedded non-volatile memory solutions, mixed-signal & RF-CMOS and CMOS image-sensor technologies. To provide world-class customer service, the company maintains two manufacturing facilities: Fab 1 has process technologies from 1.0 to 0.35 micron and can produce up to 16,000 150mm wafers per month. Fab 2 features 0.18 and 0.13-micron, standard and specialized process technologies,
