¨ Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Item 8.01. Other Events.

On March 29, 2007, ACADIA Pharmaceuticals Inc. (the Company) issued a press release announcing that it will make presentations covering its schizophrenia programs for each of ACP-103 and ACP-104 at the 2007 International Congress on Schizophrenia Research, being held from March 28 to April 1, 2007. The ACP-103 presentation will include previously announced top-line results from the recently completed Phase II schizophrenia co-therapy trial. The Company also will present new data from this study showing that patients in the co-therapy arm combining ACP-103 with risperidone (2 mg) had significantly lower prolactin levels after 42 days of treatment compared to patients in the risperidone (6 mg) plus placebo arm (p=0.0001). The condition of elevated prolactin is a commonly observed side effect of antipsychotic therapy and may adversely affect menstrual and sexual function as well as bone formation.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned hereunto duly authorized.
