OUR COMPANY

We are a leading manufacturer of high-tech dental equipment. We focus on developing innovative systems and solutions for dentists globally. We provide a broad range of advanced products in each of four primary areas: Dental CAD/CAM Systems, Imaging Systems, Treatment Centers and Instruments. Our revenue for fiscal 2008 was \$757.1 million. We sell our products globally, with the U.S. market contributing 29.2% of revenue, or \$220.9 million, the German market contributing \$153.8 million, or 20.3%, and the rest of the world contributing 50.5% of revenue, or \$382.4 million, in fiscal 2008.

The following is a brief description of each of our segments:

Dental CAD/CAM Systems address the worldwide market for dental restorations, which includes several types of restorations, such as inlays, onlays, veneers, crowns, bridges, copings and bridge-frameworks made from ceramic, metal or composite blocks. We pioneered the application of high-tech CAD/CAM techniques to the traditional lab-based restoration process with the commercialization of the CEReamic REConstruction, or CEREC, method. Our CEREC system is an in-office application which enables the dentist to produce high quality restorations from ceramic material and insert them into the patient's mouth during a single appointment. CEREC represents an advantageous substitute for the traditional out-of-mouth pre-shaped restoration method, which requires a dentist to send a model of the damaged tooth to a dental laboratory, and therefore multiple patient visits. In fiscal year 2003, Sirona launched its CEREC 3 product, which has been periodically updated, including enhanced software applications. In fiscal 2007, we launched our next generation milling unit the MC XL, as well as new Biogeneric software. The MC XL produces a high quality, precisely fitted restoration in half the time that the classic CEREC milling unit requires. The MC XL's fine tolerances are especially appreciated by doctors who demand the most precise restoration possible. In addition to CEREC, we also offer products for dental laboratories, such as inLab and inEos, which are designed to improve efficiency and reduce costs for the dental lab. inLab scans the model received from the dentist and mills the ceramic restoration, such as crown copings, bridge frameworks from ceramic or composite blocks, to the specifications of the captured image. In fiscal 2007 we launched our next generation inLab unit, the inLab MC XL. The new unit features a modern, elegant design with solid, heavy-duty construction. Milling performance and precision has been optimized and milling time has been considerably reduced. The inEos scanner, which was launched in 2005, is a high speed scanner which produces 3D digital images from a single tooth up to a jaw, directly from the plaster model. The inEos product has scanning times of less than 10 seconds, a significant factor which enhances productivity. In 2008, we expanded our CEREC offering through the introduction of CEREC Connect. CEREC Connect is a web based service that allows the digital impression acquired through the CEREC acquisition unit to be transferred electronically to InLab laboratories. The laboratories can use this data to create final restorations. Many restorations produced by a laboratory can be produced through the CEREC Connect system eliminating the need to take a physical impression in these cases.

Imaging Systems, which include a broad range of equipment for diagnostic imaging in the dental practice, using both film-based and digital technologies. We have developed a comprehensive range of imaging systems for panoramic and intra-oral applications. This allows the dentist to accommodate the patient in an efficient manner. Intra-oral x-ray equipment uses image-capture devices (film or sensor), which are inserted into the mouth behind the diagnostic area, and typically take images of one or two teeth. Panoramic x-ray equipment produces images of the entire jaw structure by means of an x-ray tube and an image capture device, which rotates around the head. In July 2004, we introduced our next generation of digital panoramic x-ray systems, the Orthophos XG line. The flagship model, the Orthophos XG Plus, provides specialists, orthodontists, oral surgeons and implantologists with over 30 programs and a wide variety of diagnostic possibilities. Other models of the family include the Orthophos XG 5 which is designed for general dental practitioners, and the basic model Orthophos XG 3. As a result of the transaction completed on June 20, 2006 (the Exchange) whereby we combined our business with Schick Technologies, Inc. (Schick), we expanded our imaging system product line to include Schick's CDR (computed digital radiography) system, the leading intra-oral digital imaging system in the United States. Schick's product line includes an imaging sensor based on CMOS technology and the Schick

Pan, a digital panoramic unit. In fiscal 2007, we introduced our GALILEOS 3D-imaging unit. Today, three-dimensional imaging is offering the field of dentistry previously undreamed-of diagnostic and therapeutic options in the fields of surgery, prosthetics, orthodontics, and restorative dentistry. GALILEOS was created to bring these options to life and integrate them efficiently into routine dental practices. In July 2008 we launched GALILEOS Compact, which is specifically tailored to meet the needs of the general practitioner and also has the ability to display traditional 2-D panoramic digital images.

Treatment Centers, which comprise a broad range of products from basic dentist chairs to sophisticated chair-based units with integrated diagnostic, hygiene and ergonomic functionalities, as well as specialist centers used in preventative treatment and for training purposes. We offer specifically configured products to meet the preferences of dentists within each region in which we operate. Our treatment center configurations and system integration are designed to enhance productivity by creating a seamless workflow within the dental practice. Our centers therefore allow the dentist to both improve productivity and increase patient satisfaction, significant factors in adding value to his or her practice. In October 2004, we acquired one of the leading Chinese manufacturers of basic treatment centers, located in Foshan (South China). These basic products are manufactured both for the domestic Chinese market and for export markets. In July 2008, we launched our new TENE0 Treatment Center, which combines industry-leading technology with a timeless design that provides both patient and dentist with the ultimate in convenience and comfort.

Instruments, which includes a wide range of instruments, including handheld and power-operated handpieces for cavity preparation, endodontics, periodontology and prophylaxis. The instruments are supplemented by multi-function tips, supply and suction hoses, as well as care and hygiene systems for instrument preparation. Our instruments are often sold as packages in combination with treatment centers. During the last two years, we introduced several new products, including: SIROLaser, a versatile, compact, convenient diode laser that can be used in endodontics, periodontology and oral surgery; PerioScan, an all-in-one ultrasonic scaling unit, enabling both diagnosis and treatment of dental calculus with a single device; and SIROEndo, a root canal preparation unit that can be attached to any treatment center. We intend to continue to strengthen the position of our Instruments segment as a diversified supplier of high-quality, reliable, user-friendly and cost-efficient dental instruments.

We distribute our products globally to dental practices, clinics and laboratories through an international network of more than 300 distributors. Because distributors typically cover both dental equipment and consumables, they have regular contact with the dentist and are therefore optimally positioned to identify new equipment sale opportunities. Our primary distributors in the United States are Patterson Companies and Henry Schein, two of the world's largest dental distributors. Outside of the United States, Henry Schein is our largest distributor, and, along with Pluradent, primarily distributes for us in Europe. We distribute elsewhere through a well developed network of independent regional distributors. We work closely with our distributors by training their technicians and sales representatives with respect to our products. With over 5,500 sales and service professionals trained each year, we are able to ensure high standards of quality in after-sale service and the best marketing of our products. The success of our products is evidenced by their importance to our distribution partners, and such products are in many cases among their best selling offerings.

Our geographic and product diversity is demonstrated by the following charts, which set forth our fiscal 2008 revenue by geographic region and product category:
