3. Certain Other Securities which have readily determinable fair value are devalued to the fair value, and the difference between the acquisition cost and the fair value is treated as the loss for the first quarter (impairment ( devaluation )), if the fair value (primarily the closing market price at the consolidated balance sheet date) has significantly deteriorated compared with the acquisition cost (including amortized cost), and unless it is deemed that there is a possibility of a recovery in the fair value. The amount of impairment ( devaluation ) for the first quarter was ¥14,940 million.

The criteria for determining whether a security s fair value has significantly deteriorated are outlined as follows:

Securities whose fair value is 50% or less of the acquisition cost,

Securities whose fair value exceeds 50% but is 70% or less of the acquisition cost and the quoted market price maintains a certain level or lower.

4. Floating-rate Japanese Government Bonds

For Floating-rate Japanese Government Bonds within Securities, based on our determination that current market prices may not reflect fair value due to the extremely limited volume of actual transactions, our domestic consolidated banking subsidiaries and a domestic consolidated trust banking subsidiary have applied reasonably calculated prices as book value for the first quarter.

In deriving the reasonably calculated price, we used the Discounted Cash Flow Method as well as other methods. The price decision variables include the yield of 10-year Japanese Government Bonds and the volatilities of interest rate swap options for 10-year Japanese Government Bonds as underlying assets.

5. Securitization Products

With respect to the credit investments in securitization products made as an alternative to loans by the European and North American offices of our domestic consolidated banking subsidiaries, given the current situation in which the volume of actual transactions is extremely limited and there exists a considerable gap between the offers and bids of sellers and buyers, we determined that valuations obtained from brokers and information vendors cannot be deemed to be the fair value, and we applied reasonably calculated prices based on the reasonable estimates of our management as fair value.

In deriving reasonably calculated prices based on the reasonable estimates of our management mentioned above, we used the Discounted Cash Flow Method. The price decision variables include default rates, recovery rates, pre-payment rates and discount rates, and the subject Securities included Residential Mortgage-Backed Securities, Collateralized Loan Obligations, Commercial Mortgage-Backed Securities and other Asset Backed Securities.

### [Additional Information]

#### **(Issuance of New Shares by the Spread Method)**

The spread method is adopted for the issuance of new shares (5,609,000 thousand shares) with a payment date of July 21, 2010. This is a method where the new shares are underwritten and purchased by the initial purchasers at the amount to be paid to MHFG (¥125.27 per share), and sold by the underwriters to the investors at an issue price (¥130.00 per share) different from the amount to be paid to MHFG.

Using the spread method, the aggregate amount of the difference between (a) the issue price and (b) the amount to be paid to MHFG is retained by the initial purchasers and allocated to each of the underwriters as underwriting fees.
