Our largest customers are Hyundai Kia Automotive Group and Ford, accounting for 29% and 25%, respectively, of 2010 net product sales.

Our History

Effective October 1, 2005, the Company transferred 23 of its North American facilities and certain other related assets and liabilities to Automotive Components Holdings, LLC (ACH), an indirect, wholly-owned subsidiary of Ford (the ACH Transactions). The transferred facilities included all of the Company s plants that leased hourly workers covered by Ford s Master Agreement with the United Auto Workers Union (UAW), and accounted for approximately \$6.1 billion of the Company s total product sales for 2005, the majority being products sold to Ford.

In January 2006, the Company announced a multi-year improvement plan that involved the restructuring of certain underperforming and non-strategic plants and businesses to improve operating and financial performance and to reduce costs. The multi-year improvement plan, which was initially expected to affect up to 23 facilities, was completed during 2008 and addressed a total of 30 facilities and businesses, including 7 divestitures and 14 closures. These activities resulted in sales declines of \$1 billion during the year ended December 31, 2008.

During the latter part of 2008 and through 2009, weakened economic conditions, largely attributable to the global credit crisis, and erosion of consumer confidence, negatively impacted the automotive sector.

Our Reorganization

On May 28, 2009, we filed voluntary petitions in the United States Bankruptcy Court for the District of Delaware (the Bankruptcy Court), to reorganize under chapter 11 (Chapter 11) of the United States Bankruptcy Code (the Bankruptcy Code). The Chapter 11 cases were jointly administered under the caption Visteon Corporation, et al., Case No. 09-11786. We continued to operate our businesses as a debtor-in-possession under the jurisdiction of the Bankruptcy Court in accordance with the applicable provisions of the Bankruptcy Code.

On August 31, 2010, we filed a Fifth Amended Joint Plan of Reorganization (the Plan of Reorganization) with the Bankruptcy Court. The Plan of Reorganization was confirmed by the Bankruptcy Court on August 31, 2010 (the Confirmation Order), and became effective on October 1, 2010 (the Effective Date), the date on which we emerged from protection under Chapter 11 of the Bankruptcy Code. Additional details regarding the status of our Chapter 11 Proceedings are included in our 2010 Annual Report on Form 10-K, incorporated herein by reference.

Our Industry

In general, the automotive industry is cyclical, highly competitive, capital intensive, and sensitive to changes in overall economic conditions. During 2010, the global automotive industry began to recover from the unprecedented downturn of 2009, as evidenced by double digit production volume increases for most global OEMs. However, while industry production volumes increased from the trough of 2009 levels, current volumes remain lower than peak levels of the recent past, driven largely by the U.S. market. Significant developments and trends affecting the global automotive industry are summarized below.

Globalization The automotive sector is rapidly globalizing. To lower costs, OEMs are expected to continue to shift their production facilities from high-cost regions such as North America and Western Europe to lower-cost regions such as Brazil, Russia, India and China. The continued globalization of the automotive industry is pushing OEMs and suppliers to move to a more collaborative design-to-cost approach, where innovative solutions are applied to technology available in current products resulting in a much simpler variant with a lower cost, while ensuring safety and performance.

Regulatory environment Governments in all major countries have a significant influence on the automotive sector through various environmental, energy, economic, labor and consumer safety policies and regulations. Such policies and regulations can impact vehicle design, as well as production and assembly processes. Recent policy-making and regulatory efforts have resulted in more stringent automobile emissions standards in North America and Western Europe, and increasingly in emerging markets, requiring smaller and lighter vehicles and steering innovation efforts toward cleaner energy sources.

Fuel efficiency and green initiatives In the wake of the increased cost of petroleum-based fuel, global regulatory momentum to reduce emissions, and consumer demand for more environmentally friendly products, OEMs have turned to alternative fuel combustion engines, electric vehicles and other environmentally conscious technologies. Additionally, OEMs are designing their vehicles with more renewable materials and are reducing the level of volatile organic compounds in their vehicles.

Vehicle safety, comfort and convenience OEMs are incorporating more safety oriented technologies into their vehicles such as air bags, anti-lock brakes, traction control, adaptive and driver visibility enhancing lighting and driver awareness capabilities. Digital and portable technologies have dramatically influenced the lifestyle of today's consumers who expect products that enable such a lifestyle. This requires increased electronic and technical content such as in-vehicle communication, navigation and entertainment capabilities.

Table of Contents

Customer price pressures and raw material cost inflation The highly competitive nature of the automotive industry drives a focus on cost and price throughout the entire automotive supply chain. Virtually all OEMs have aggressive price reduction initiatives each year with their suppliers. Further, suppliers are continually challenged by the volatile nature of critical manufacturing inputs, specifically, commodity-driven raw material and energy costs.
