- * Evidenced by American Depositary Receipts. Each American Depositary Share Represents one Rio Tinto plc Ordinary Shares of 10p each.
- ** Not for trading, but only in connection with the listing of American Depositary Shares, pursuant to the requirements of the Securities and Exchange Commission

Securities registered or to be registered pursuant to Section 12(g) of the Act:

Title of Class None	Title of Class Shares
Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:	
None	None

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report:

Title of each class	Rio Tinto plc Number	Rio Tinto Limited Number	Title of each class Shares
Ordinary Shares of 10p each	1,425,377,388	435,758,720	
DLC Dividend Share of 10p	1	1	DLC Dividend Share
Special Voting Share of 10p	1	1	Special Voting Share

Indicate by check mark if the registrants are well-known seasoned issuers, as defined in rule 405 of the Securities Act. Yes No

If this report is an annual or transition report, indicate by check mark if the registrants are not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934. Yes No

Note: Checking the box above will not relieve any registrant required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 from their obligations under those Sections.

Indicate by check mark whether the registrants: (1) have filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrants were required to file such reports), and (2) have been subject to such filing requirements for the past 90 days: Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).* Yes No

* This requirement does not apply to the registrant until its fiscal year ending December 31, 2013.

Edgar Filing: RIO TINTO PLC - Form 20-F

Indicate by check mark whether the registrants are large accelerated filers, accelerated filers, or non-accelerated filers. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large Accelerated Filer Accelerated Filer Non-Accelerated Filer

Indicate by check mark which basis of accounting the registrants have used to prepare the financial statements included in this filing:

US GAAP International Financial Reporting Standards as issued Other

by the International Accounting Standards Board

If "Other" has been checked in response to the previous question, indicate by check mark which financial statement item the registrants have elected to follow: Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). Yes No

of the Rio Tinto Annual Report 2014 is incorporated herein by reference.

Exchange rates

The following tables show, for the periods and dates indicated, certain information regarding the exchange rates for the pound sterling and Australian dollar, based on the Noon Buying Rates for pounds sterling and Australian dollars expressed in US dollars per £1.00 and per A\$1.00.

Table of Contents**Pounds sterling**

Year ended 31 December(a)	Period end	Average rate	High	Low
Jan 2015	1.51	1.51	1.54	1.50
Dec 2014	1.56	1.56	1.57	1.55
Nov 2014	1.57	1.58	1.60	1.56
Oct 2014	1.60	1.61	1.62	1.59
Sep 2014	1.62	1.63	1.66	1.61
Aug 2014	1.66	1.67	1.69	1.66
2014	1.56	1.65	1.72	1.55
2013	1.63	1.56	1.63	1.51
2012	1.63	1.59	1.63	1.53
2011	1.55	1.60	1.67	1.67
2010	1.56	1.55	1.64	1.43

- (a) The Noon Buying Rate on such dates differed slightly from the rates used in the preparation of Rio Tinto's financial statements as of such date. No representation is made that pound sterling and Australian dollar amounts have been, could have been or could be converted into dollars at the Noon Buying Rate on such dates or at any other dates.

As at 16 February 2015, the Noon Buying Rate was 1.54.

Australian dollars

Year ended 31 December(a)	Period end	Average rate	High	Low
Jan 2015	0.78	0.81	0.82	0.78
Dec 2014	0.82	0.82	0.85	0.81
Nov 2014	0.85	0.86	0.87	0.85
Oct 2014	0.88	0.88	0.89	0.87
Sep 2014	0.87	0.91	0.94	0.87
Aug 2014	0.93	0.93	0.93	0.93

Table of Contents**5A Operating results continued****Additional Financial Information****Financial Review****2014 financial performance compared with 2013**

In order to provide additional insight into the performance of our business, Rio Tinto presents underlying earnings, which is defined in note 2 Operating segments on pages 123 to 125 of the Rio Tinto Annual Report 2014.

2014 underlying earnings of US\$9,305 million (2013: US\$10,217 million) and net earnings of US\$6,527 million (2013: US\$3,665 million) were US\$912 million below (2013: US\$948 million above) and US\$2,862 million above (2013: US\$6,693 million above) the comparable measures for the previous year respectively. Both net earnings and underlying earnings represent amounts attributable to the owners of Rio Tinto. IFRS requires that the profit for the period reported in the income statement should also include earnings attributable to non-controlling interests in subsidiaries. Underlying earnings is reconciled to net earnings in the table below, which also lists the principal factors driving the movement in underlying earnings between periods.

	2014 vs 2013	
	US\$m	US\$m
2013 Net earnings	3,665	
Items excluded from underlying earnings ^(a)	6,552	
2013 Underlying earnings		10,217
Prices	(4,146)	
Exchange rates	691	
Volumes	1,431	
General inflation and energy	(251)	
Other cash costs	958	
Exploration and evaluation costs	217	
Disposal/write-down of exploration properties	101	
Non-cash/interest/tax/other	87	
Total changes in underlying earnings ^(a)		(912)
2014 Underlying earnings		9,305
Impairment charges net of reversals	(138)	
Net gains and losses on consolidation and disposal of interests in businesses	(349)	
Exchange differences and movements on derivatives	(1,850)	
Restructuring costs from global headcount reductions	(82)	
Write-off of deferred tax asset following the MRRT repeal	(362)	
Gain on disposal of the Group's St James's Square properties	356	
Simandou IFRS 2 charge	(116)	
Other exclusions	(237)	

Total excluded in arriving at underlying earnings	(2,778)
2014 Net earnings	6,527
- Attributable to non-controlling interests	(28)
Profit for the year	6,499

- (a) Earnings contributions from Group businesses and business segments are based on underlying earnings. Amounts excluded from net earnings in arriving at underlying earnings are described in note 2 Operating segments (c) and (d) on pages 124 to 125 of the Rio Tinto Annual Report 2014.

Table of Contents

Prices

The effect of price movements on all major commodities in 2014 was to decrease underlying earnings by US\$4,146 million compared with 2013. The average Platts price for 62 per cent iron Pilbara fines was 30 per cent lower on average compared with 2013, and hard coking coal benchmark prices 21 per cent lower, and thermal coal spot prices 17 per cent lower. Average copper and gold prices were down seven and ten per cent respectively, whilst London Metal Exchange (LME) aluminium prices averaged one per cent higher.

Exchange rates

Compared with 2013, the US dollar, on average, strengthened by seven per cent against both the Australian and Canadian dollars and by 12 per cent against the South African rand. The effect of all currency movements was to increase underlying earnings relative to 2013 by US\$691 million.

Volumes

Volumes enhanced earnings by US\$1,431 million compared with 2013. These were achieved primarily in Iron Ore, where, for a second consecutive year, a new annual sales volume record was achieved following the increase in capacity at the Pilbara ports and mines, combined with productivity improvements. Volumes also rose in Copper, following the recovery at Kennecott Utah Copper from the pit wall slide, in addition to higher ore grades and increased throughput, and at Oyu Tolgoi as shipments outpaced production.

Cash costs, exploration and evaluation

Rio Tinto made further strong progress on its cost reduction programme and has now achieved US\$4.8 billion pre-tax (US\$3.3 billion post-tax) in total operating cash cost improvements and reductions in exploration and evaluation expenditure compared with the 2012 base.

In 2014, the Group realised US\$1.2 billion post-tax in operating cash cost savings and reductions in exploration and evaluation spend. This was in addition to the US\$2.1 billion post-tax achieved in 2013.

Non-cash/interest/tax/other

The 2014 effective corporate income tax rate on underlying earnings, excluding equity accounted units, was 28 per cent compared with 35 per cent in 2013. The decreased rate was primarily attributable to the repeal of MRRT in the second half of 2014 and the absence of prior year tax provisions.

The Group interest charge was US\$81 million lower than in 2013, mainly reflecting the reduction in net debt during 2014.

In 2013 there was a US\$128 million charge to earnings from an iron ore royalty payable to joint venture partners following a court decision. There was no such charge in 2014.

Table of Contents**2013 financial performance compared with 2012**

	2013 vs 2012	
	US\$m	US\$m
2012 Net loss		(3,028)
Items excluded from underlying earnings ^(a)		12,297
2012 Underlying earnings		9,269
Prices	(1,289)	
Exchange rates	1,008	
Volumes	538	
General inflation and energy	(368)	
Other cash costs	1,559	
Exploration and evaluation costs	557	
Disposal/write-down of exploration properties	(477)	
Non-cash/interest/tax/other	(580)	
Total changes in underlying earnings ^(a)		948
2013 Underlying earnings		10,217
Impairment charges net of reversal	(3,428)	
Net gains and losses on consolidation and disposal of interests in businesses	847	
Exchange differences and movements on derivatives	(2,731)	
Restructuring costs from global headcount reductions	(367)	
Impact of pit wall slide at Kennecott Utah Copper	(283)	
Adjustments to Clermont/Blair Athol on reclassification to disposal groups held for sale	(173)	
Deferred tax asset write-off	(114)	
Other exclusions	(303)	
Total excluded in arriving at underlying earnings		(6,552)
2013 Net earnings		3,665
- Attributable to non-controlling interests		(2,586)
Profit for the year		1,079

(a) Earnings contributions from Group businesses and business segments are based on underlying earnings. Amounts excluded from net earnings in arriving at underlying earnings are described in note 2 Operating segments (c) and (d) on pages 124 to 125 of the Rio Tinto Annual Report 2014.

Prices

The effect of price movements on all major commodities was to decrease underlying earnings by US\$1,289 million compared with 2012.

The average Platts price for 62 per cent iron Pilbara fines was three per cent higher on average compared with 2012, while hard coking coal benchmark prices were 24 per cent lower, and thermal coal spot prices averaged 14 per cent lower. Copper prices were down eight per cent and LME prices for gold and aluminium averaged 16 and nine per cent lower respectively.

Exchange rates

The US dollar strengthened during 2013, in particular in the second half of the year. Compared with 2012, the US dollar, on average, rose by six per cent against the Australian dollar, by three per cent against the Canadian dollar, and by 15 per cent against the South African rand. The effect of all currency movements was to increase underlying earnings relative to 2012 by US\$1,008 million.

Table of Contents

Volumes

Volume increases enhanced earnings by US\$538 million compared with 2012. These were achieved primarily in Iron Ore, where a new annual sales volume record was achieved, due to increased capacity at the Pilbara ports, and productivity improvements. Volumes also rose in Copper, mainly from Escondida in line with higher ore grades and increased throughput, in bauxite from higher production volumes across all mines, and in aluminium following the return of the Alma smelter to full production. These additional tonnes more than offset the impact of lower gold production at Kennecott Utah Copper and lower demand for titanium dioxide feedstocks.

Cash costs, exploration and evaluation

Rio Tinto made strong progress on its cost reduction programme and exceeded its 2013 targets. In 2013, the Group realised US\$2,279 million pre-tax (US\$1,559 million post-tax) in operating cash cost savings which exceeded the target of US\$2 billion.

Exploration and evaluation spend was reduced by US\$1,023 million (on a consolidated, pre-tax basis) which exceeded the target reduction of US\$750 million. Evaluation spend has been prioritised on those projects with the greatest potential to deliver value in the medium term, with spend on certain longer-dated options reduced. On a net earnings basis this resulted in an improvement of US\$557 million. These are offset by the absence of a gain on disposal, and the write-down of certain exploration properties in 2013. The Group wrote down its investment in Northern Dynasty Minerals, which owns 100 per cent of the Pebble Project in Alaska, by US\$131 million following the announcement of a strategic review. In 2012, Rio Tinto reported net gains of US\$346 million on divestment of various exploration properties, including its interests in Extract Resources and Kalahari Minerals.

In 2013, the Group reduced headcount by 4,000, net of new roles in the Iron Ore group to support the Pilbara 290 expansion. A further 3,300 roles left the Group through divested assets.

Non-cash/interest/tax/other

The effective corporate income tax rate on underlying earnings, excluding equity accounted units was 35 per cent compared with 30 per cent in 2012. The increased charge was primarily attributable to utilisation of the MRRT deferred tax asset. As in 2012, the effective corporate tax on net earnings, excluding equity accounted units, is significantly impacted by the impairment of goodwill, which is non-deductible for tax purposes.

The Group net interest charge was US\$130 million higher than in 2012, mainly reflecting higher average net debt in 2013 (2012: mainly reflecting an increase in capitalised interest).

Table of Contents**Exclusions from underlying earnings 2012-2014**

Earnings contributions from Group businesses and business segments are based on underlying earnings. Amounts excluded from net earnings in arriving at underlying earnings are summarised in the discussion of year-on-year results below.

	2014	2013	2012
	US\$m	US\$m	US\$m
Impairment charges	(1,187)	(3,428)	(14,360)
Impairment reversals	1,049		
Gains and losses on consolidation and disposal of interests in businesses	(349)	847	827
Exchange differences and derivative movements	(1,850)	(2,731)	550
Write-off of deferred tax asset following the MRRT appeal	(362)		
Gain on sale of the Group's properties at St James's Square	356		
Simandou IFRS 2 charge	(116)		
Restructuring costs including global headcount reductions	(82)	(367)	(77)
Impact of pit wall slide at Kennecott Utah Copper		(283)	
Adjustments to Clermont/Blair Athol on reclassification to disposal groups held for sale		(173)	
Deferred tax asset write-off		(114)	(134)
Recognition of deferred tax asset following introduction of MRRT in 2012			1,130
Other exclusions	(237)	(303)	(233)
Total excluded in arriving at underlying earnings	(2,778)	(6,552)	(12,297)

2014

An impairment charge of US\$1,187 million (net of tax and non-controlling interests) was recognised in 2014 and related to the Group's aluminium business, US\$840 million, and the Group's copper businesses, US\$347 million

The Group's copper business impairment charge resulted from a review of the investment case for the Molybdenum Autoclave Process project in Utah, USA which concluded that the project, which has been on care and maintenance since early 2013, will be terminated. The recoverable amount has been determined based on anticipated net disposal proceeds. As a result, a post-tax impairment charge of US\$347 million has been recorded against property, plant and equipment.

During the first half of 2014, further revisions to future capital required to complete the modernisation project at Kitimat in British Columbia, and related impacts on the project, led to a reduction in the recoverable value of the Kitimat cash-generating unit. Additional capital of US\$1.5 billion was approved by the Board in August 2014, taking the total approved capital cost of the project to US\$4.8 billion. The reduction in the recoverable amount resulted in a post-tax impairment charge of US\$800 million to property, plant and equipment. Other post-tax impairment charges during 2014, related to the Group's aluminium business, were US\$40 million.

The above impairment charges were offset by reversal of previously booked impairments on other non-current assets in the Group's aluminium business, due to significant cost improvements and high regional and product premiums, resulting in a post-tax impairment reversal of US\$460 million recorded against the property, plant and equipment of Tomago, Bell Bay and Gladstone Power Station and a post-tax impairment reversal of US\$589 million relating to Boyne Smelters recorded against investments in equity accounted units. The recoverable amount of the assets is greater than the amount at which these assets would have been carried, net of depreciation, had no impairment loss been recognised in prior periods and therefore the impairment reversal is based on the latter amount.

Table of Contents

Net losses on disposal and consolidation of interests in businesses during 2014 mainly relate to the Group's divestment of Rio Tinto Coal Mozambique, the Clermont Joint Venture and the transfer of Alucam to the Government of Cameroon.

Non-cash exchange and derivative losses of US\$1,850 million arose primarily on US dollar debt in non-US dollar functional currency companies, and on intragroup balances.

The remaining Mineral Resources Rent Tax starting base deferred tax asset was derecognised on repeal of the tax in Australia, effective 30 September 2014.

A gain of US\$356 million net of tax was recognised on the disposal of the Group's St James's Square properties in London, UK.

2013

Total impairment charges of US\$3,428 million (net of tax and non-controlling interests) were recognised in 2013, of which US\$1,655 million related to the Group's copper businesses. This included a charge of US\$1,565 million related to the impairment of certain assets of Turquoise Hill (including Oyu Tolgoi). On 29 July 2013, Rio Tinto announced that funding and work on the underground development would be delayed pending resolution of outstanding shareholder issues, including finalising project finance. The consequent impact of updates to timing of revenues and expenditure resulted in the carrying value being higher than fair value less costs of disposal (FVLCD).

Impairments to the Group's copper businesses also include adjustments to reduce the carrying value of the Eagle nickel-copper project to FVLCD prior to divestment on 17 July 2013, the impact of medium and long-term coking and thermal coal prices on non-cash fair value acquisition adjustments to undeveloped projects at SouthGobi Resources, and adjustment to the carrying value of Inova Resources, which was sold on 1 November 2013.

In addition, there was a post-tax impairment of US\$1,293 million relating to the Group's aluminium businesses. This included US\$555 million for the Gove refinery, following an announcement on 29 November 2013 to suspend alumina production and focus on the bauxite operation. As a result of this decision, the timing and scope of site restoration and environmental rehabilitation cash flows have been revised, together with the write-off of operating assets not fully depreciated. The remaining post-tax charge of US\$738 million related to the Group's Canadian aluminium operations, primarily at Kitimat in British Columbia, resulting from a change in assumptions about future capital required to complete the modernisation project, which diminished the value of the associated intangible assets, and another site closure within the Aluminium portfolio.

A post-tax impairment charge of US\$470 million relating to Rio Tinto Coal Mozambique (RTCM) has been recognised. An assessment of FVLCD derived from future cash flows, which included a reassessment of the development plan and review of the discount rate and associated country risk premium, resulted in the recoverable value being below carrying value.

Net gains on disposal of interests in businesses during 2013 mainly relate to the Group's divestment of its remaining interest in Constellium (formerly Alcan Engineered Products) and the Northparkes mine.

Non-cash exchange and derivative losses of US\$2,731 million arose primarily on US dollar debt in non-US dollar functional currency companies, and on intragroup balances.

Kennecott Utah Copper's Bingham Canyon mine experienced a slide along a geological fault line of its north-eastern wall in April 2013. Charges relating to the slide, which have been excluded from underlying earnings, primarily comprised the write-off of certain deferred stripping assets and damaged equipment. Adjustments for settlement of insurance claims have been made to the amount excluded from underlying earnings, and will continue as insurance claims are settled.

Adjustments in relation to Clermont and Blair Athol arose following reclassification to disposal groups held for sale, and reflect contractual obligations for product sales and funding of closure activities, which will remain with the Group following completion of the divestments.

Table of Contents

2012

A post-tax impairment charge of US\$14,360 million was recognised in 2012, of which US\$11,000 million related to the Group's aluminium businesses. During 2012, aluminium prices deteriorated further with strong Australian and Canadian currencies, high energy and raw material costs, and high volumes of LME inventory continuing to exert pressure on market values in the industry.

A post-tax impairment charge of US\$2,860 million was also recognised relating to RTCM. The development of infrastructure in Mozambique to support the undeveloped coal asset was found to be more challenging than initially anticipated which, combined with a downward revision to estimates of recoverable coking coal volumes, led to a reassessment of the overall scale and ramp-up schedule of RTCM and consequently to the assessment of its FVLCD.

In addition, there were net post-tax impairments of US\$460 million relating to the Group's Argyle diamond mine and US\$40 million in other net impairments. An impairment review of Argyle was triggered by the announcement during 2012 of the Diamonds strategic review, as well as changes to the forecast ramp-up date for the underground mine.

Gains and losses on consolidation and disposal of interests in businesses relate primarily to a gain of US\$965 million arising on consolidation of Richards Bay Minerals in September 2012 and a US\$167 million loss on consolidation of Turquoise Hill Resources.

A deferred tax asset was recognised in 2012 following introduction of the MRRT on 1 July 2012. The legislation, which applies to companies with iron ore and coal operations in Australia, allows a deduction against future MRRT liability based on the market value of past investments in these mining assets as at 1 May 2010. Accordingly, a deferred tax asset was recognised to reflect the deductibility for MRRT purposes of the market value of these mining assets to the extent recovery is probable.

Group financial results by product group 2012-2014

	2014	2013	2012

Gold		Ounce	1,184	1,208	1,675

(a) Dry metric tonne

(b) LME cash price

The above table shows published prices for Rio Tinto's commodities for the last three years where these are publicly available, and where there is a reasonable degree of correlation between the published prices and Rio Tinto's realised prices.

Group sales revenue will not necessarily move in line with these published prices for a number of reasons which are discussed below.

The discussion of revenues below relates to the Group's gross revenue from sale of commodities, as included in the financial information by business unit on page 178 to 182 of the Rio Tinto Annual Report 2014.

Iron Ore**2014 sales revenue compared with 2013**

Record sales volumes in the Pilbara for a second year partially mitigated the impact of lower iron ore prices, down 30 per cent on average year on year. In 2014, approximately 25 per cent of sales were priced with reference to a quarterly average index set at the prior quarter's average lagged by one month. The remainder was sold via pricing mechanisms priced closer to the index price at the time of shipment, such as current quarter average, current month average or spot index prices. Index prices are adjusted for product characteristics and iron and moisture content.

2013 sales revenue compared with 2012

Gross sales revenue for the Iron Ore group increased by seven per cent compared with 2012, attributable to record sales volumes in the Pilbara and marginally higher prices. Sales volumes increased by five per cent across the product

group. In 2013, approximately 30 per cent of sales were priced with reference to a quarterly average index set at the prior quarter's average lagged by one month. The remainder was sold via pricing mechanisms priced closer to the index price at the time of shipment, such as current quarter average, current month average or spot index prices. Index prices are adjusted for product characteristics and iron and moisture content.

Table of Contents

Aluminium

2014 sales revenue compared with 2013

The Aluminium group's sales revenues are from aluminium and related products such as alumina and bauxite.

A one per cent increase in LME prices and stronger regional and product premiums, were not sufficient to offset the impact of reduced sales volumes of bauxite and aluminium compared with 2013, resulting in a three percent reduction in sales revenue. The reduction in aluminium sales volumes was mainly due to the closure of the Shawinigan smelter in December 2013, and the divestment of the Sørå and Alucam smelters during 2014.

2013 sales revenue compared with 2012

Sales revenue increased by two per cent, reflecting increasing volumes across all products, and a rise in regional market premiums more than offsetting a nine per cent decline in LME prices over the period. Regional market premiums on aluminium shipments continued to perform strongly in 2013, supported by balanced physical supply/demand, despite significant LME inventories, much of which remains tied up in financing deals due to higher forward prices and low interest rates.

Copper

2014 sales revenue compared with 2013

Gross sales revenue increased by six per cent in 2014 compared with 2013. Increased sales volumes, primarily attributable to a full year of production at Oyu Tolgoi, were partially offset by a seven per cent decline in average copper prices and a 11 per cent decline in the average gold price during the period.

At 31 December 2014, the Group had an estimated 331 million pounds of copper sales (2013: 254 million pounds) that were provisionally priced at 288 US cents per pound (2013: 333 US cents per pound). The final price of these sales will be determined during the first half of 2015.

2013 sales revenue compared with 2012

Gross sales revenue for the Copper group decreased by 11 per cent in 2013 compared with 2012. This reflected an eight per cent decline in the copper price during the period, and a 16 per cent decline in the gold price, together with divestment of the Palabora and Northparkes operations during 2013.

Diamonds & Minerals

2014 sales revenue compared with 2013

Diamond prices realised by Rio Tinto depend on the size and quality of diamonds in the product mix.

Gross sales revenues decreased by one per cent, mainly driven by lower prices for titanium dioxide feedstocks, borates and zircon, and a decline in volume of diamond sales which were partially offset by higher realised prices on diamonds, and higher sales volumes of titanium dioxide feedstocks, borates and zircon.

2013 sales revenue compared with 2012

Gross sales revenue increased by three per cent, largely as the result of consolidating a full year of sales at Richards Bay Minerals which offset the impact of lower prices for zircon, titanium dioxide feedstocks, borates and metallics and lower sales volumes of titanium dioxide feedstocks due to challenging market conditions. Markets for titanium dioxide and zircon have softened further over the course of the year as the industry continues to work through high levels of inventories.

Diamonds revenue was 15 per cent above 2012 due to higher volumes and increased prices; polished diamond prices were relatively stable throughout 2013 whilst slightly greater volatility was experienced in prices for rough diamonds.

Table of Contents

Energy

2014 sales revenue compared with 2013

The decline in gross sales revenue of 21 per cent was predominantly attributable to lower prices with 21 per cent and 17 per cent reductions in the average coking coal benchmark and thermal coal prices respectively. Price reductions were partially offset by higher sales volumes at Kestrel and Hail Creek, offset by the loss of tonnes from Clermont with the divestment completed on 29 May 2014. The uranium spot price index ended the year three per cent above 2013 at US\$35.50 per pound while the long-term price indicators lost one per cent to end the year at US\$49.50 per pound.

A significant proportion of Rio Tinto's coal production is sold under long-term contracts. In Australia, the prices applying to sales under the long-term contracts are generally renegotiated annually for thermal coal, but prices are fixed at different times of the year and on a variety of bases. Coking coal prices for 2014 have been negotiated on a quarterly basis. For these reasons, average realised prices will not necessarily reflect the movements in any of the publicly quoted prices. Rio Tinto Uranium also sells predominantly on a longer-term contract basis. Moreover, there are significant product specification differences between mines. Sales volumes of all products will vary during the year and the timing of shipments will also result in differences between average realised prices and published prices.

2013 sales revenue compared with 2012

Gross sales revenue in 2013 for the Energy group decreased by ten per cent compared with 2012 as a result of significantly lower prices. Global thermal coal prices continued the weaker trend of the past two years, and excess supply continues to impact the coking coal market with nearly all major exporting countries increasing output in 2013. Excess supply and enduring closure of Japan's nuclear industry continued to adversely impact the uranium market in 2013. The uranium spot price index ended the year 20 per cent below 2012 at US\$34.50 per pound, while the long-term price indicator lost 12 per cent to end the year at US\$50 per pound.

Cash flow

2014 compared with 2013

A full consolidated cash flow statement is contained in the financial statements on page 105 of the 2014 Rio Tinto Annual Report.

Net cash generated from operating activities was US\$14.3 billion, five per cent lower than 2013, reflecting the negative impact of lower prices partially offset by the positive impact of higher volumes, cash costs improvements and favourable current trade working capital movements.

Purchase of property, plant and equipment and intangible assets declined by US\$4.8 billion or 37 per cent to US\$8.2 billion in 2014. This was driven by the completion of five major capital projects during 2013 and continued capital discipline.

Net proceeds from disposals of subsidiaries, joint ventures and associates totaled US\$0.9 billion in 2014, primarily reflecting the sale of the Group's interests in the Clermont Joint Venture and Rio Tinto Coal Mozambique.

Other investing cash flows resulted in an improvement of US\$647 million mainly due to the disposal of the Group's properties at St James's Square.

Dividends paid in 2014 of US\$3.7 billion reflect the 12 per cent increase to the 2013 dividends paid.

Repayments of borrowings increased from US\$1.8 billion to US\$3.5 billion during 2014.

2013 compared with 2012

Cash flows from operations, including dividends from equity accounted units, were US\$20.1 billion, 22 per cent higher than 2012, reflecting the positive impact of higher volumes and the cost reduction initiatives. Tax payments in 2013 of US\$3.7 billion were US\$2.1 billion lower than in 2012. The stronger cash flows from operations and lower taxes drove net cash generated from operating activities 60 per cent higher to US\$15.1 billion.

Table of Contents

Purchase of property, plant and equipment and intangible assets declined by US\$4.6 billion or 26 per cent to US\$13.0 billion in 2013. Five major capital projects were completed during the year: the Pilbara iron ore mines and infrastructure expansion to 290Mt/a in Western Australia, the Oyu Tolgoi copper-gold mine and concentrator in Mongolia, the Kestrel coking coal mine extension and expansion in Queensland, the Argyle diamond underground mine in Western Australia and the AP60 aluminium smelter in Quebec. Ongoing capital projects include the second phase expansion of the Pilbara iron ore infrastructure to 360Mt/a, due to come on stream at the end of the first half of 2015, and the modernisation of the Kitimat aluminium smelter in British Columbia.

Net proceeds from disposals of subsidiaries, joint ventures and associates totalled US\$1.9 billion in 2013, primarily reflecting the sale of the Group's interests in Northparkes, Constellium, Eagle and Altynalmas Gold. Additional cash inflows from disposals were reflected within Sales of financial assets and Dividends from equity accounted units. Total disposal proceeds in 2013 of US\$2.5 billion are presented after adjusting for working capital and other items.

Dividends paid in 2013 of US\$3.3 billion reflected a 15 per cent increase in the 2012 final dividends paid.

Balance sheet at 31 December 2014

Net debt decreased from US\$18.1 billion to US\$12.5 billion at 31 December 2014 as operating cash inflows and divestment proceeds fully offset the outflows relating to capital expenditure and the increase in the dividend. Net debt at 31 December 2014 was made up principally from adjusted total borrowings (as defined in note 24 Consolidated net debt to the financial statements) of US\$24.9 billion, offset by US\$12.4 billion in cash and cash equivalents. The proportion of net debt to total capital stood at 19 per cent at 31 December 2014, an improvement of seven per cent from the prior year.

Total borrowings at 31 December 2014 were US\$25.1 billion. The weighted average cost of total borrowings was approximately four per cent and the weighted average maturity of total borrowings was around eight years with the maximum nominal amount maturing in any one calendar year currently US\$3.3 billion. At 31 December 2014, approximately 71 per cent of Rio Tinto's adjusted total borrowings were at fixed interest rates.

Financial instruments and risk management

The Group's policies with regard to financial instruments and risk management are clearly defined and consistently applied. They are a fundamental part of the Group's long-term strategy covering areas such as foreign exchange risk, interest rate risk, commodity price risk, credit risk, and liquidity risk and capital management. Further details of our Financial instruments and risk management are disclosed in note 30 Financial instruments and risk management to the financial statements.

The Rio Tinto Annual Report 2014 shows the full extent of the Group's financial commitments, including debt. The risk factors to which the Group is subject are summarised on pages 14 to 17 of the Rio Tinto Annual Report 2014.

The effectiveness of internal control procedures continues to be a high priority in the Rio Tinto Group. The board's statement on internal control is set out in the Risk management section.

Dividend

The 2014 interim dividend was 96.0 US cents (2013: 83.5 US cents) and the final dividend is determined as 119.0 US cents (2013: 108.5 US cents). Dividends paid on Rio Tinto plc and Rio Tinto Limited shares are equalised on a net cash basis; that is, without taking into account any associated tax credits. Dividends are determined in US dollars. Rio

Tinto plc dividends are paid and declared in pounds sterling and Rio Tinto Limited dividends are declared and paid in Australian dollars, converted at exchange rates on 10 February 2015. Details relating to the dividend policy, determination and payment of dividends in sterling, Australian dollars and other currencies and on the payment of dividends to holders of American Depositary Receipts (ADRs) are included in the Shareholder information section.

Table of Contents**Capital and liquidity risk management**

The Group's total capital is defined as equity attributable to owners of Rio Tinto plus equity attributable to non-controlling interests and net debt, as shown below:

Total capital

	2014	2013
	US\$m	US\$m
Equity attributable to owners of Rio Tinto	46,285	45,886
Equity attributable to non-controlling interests	8,309	7,616
Net debt (note 24 of the Rio Tinto Annual Report 2014)	12,495	18,055
Total capital	67,089	71,557

The Group's major capital and evaluation projects are listed in the Capital allocation section on pages 18 and 19 of the Rio Tinto Annual Report 2014.

We expect that contractual commitments for expenditure, together with other expenditure and liquidity requirements, will be met from internal cash flow and, to the extent necessary, from the existing facilities described in note 30

Financial instruments and risk management, part (v) to the Rio Tinto Annual Report 2014. This note also provides further details of our liquidity and capital risk management.

Treasury management and financial instruments

Details of our Treasury management and financial instruments are contained within the introductory paragraphs of note 30 Financial instruments and risk management to the Rio Tinto Annual Report 2014.

Foreign exchange

The following sensitivities give the estimated effect on underlying earnings assuming that each exchange rate moved in isolation. The relationship between currencies and commodity prices is a complex one and movements in exchange rates can cause movements in commodity prices and vice versa. Where the functional currency of an operation is that of a country for which production of commodities is an important feature of the economy, such as the Australian dollar, there is a certain degree of natural protection against cyclical fluctuations, in that the currency tends to be weak, reducing costs in US dollar terms, when commodity prices are low, and vice versa.

Earnings sensitivities Exchange rate

Average exchange rate for 2014 US cents	Effect on underlying earnings of 10% change in full year average
---	--

		+/- \$USm
Australian dollar	90	753
Canadian dollar	91	251
Euro	133	29
Chilean peso	US\$1 = 569	29
New Zealand dollar	83	24
South African rand	US\$1 = 10.84	26
UK sterling	165	

The exchange rate sensitivities quoted above include the effect on net operating costs of movements in exchange rates but exclude the effect of the revaluation of foreign currency financial assets and liabilities. They should therefore be used with caution. Further details of our exposure to foreign currency fluctuations and currency derivatives, and our approach to currency hedging, are contained within note 30 Financial instruments and risk management , part A(b)(i), of the Rio Tinto Annual Report 2014.

Table of Contents**Interest rates**

Details of our exposure to interest rate fluctuations are contained within note 30 Financial instruments and risk management of the Rio Tinto Annual Report 2014.

Commodity prices

The approximate effect on the Group's underlying and net earnings of a ten per cent change from the full year average market price in 2014 for the following products would be:

Commodity	Unit	Average market price for 2014 US\$	Effect on underlying earnings of 10% change in full year average +/- US\$m
Iron ore			
62% Fe Fines FOB	dmt	88	1,303
Aluminium ^(a)	Tonne	1,867	462
Copper ^(a)	Pound	3.10	340
Gold	Ounce	1,266	46

(a) Excludes the impact of commodity derivatives.

The sensitivities give the estimated impact on net earnings of changes in prices assuming that all other variables remain constant. These should be used with caution. As noted previously, the relationship between currencies and commodity prices is a complex one and changes in exchange rates can influence commodity prices and vice versa.

Further details of our exposure to commodity price fluctuations are contained within note 30 Financial instruments and risk management of the Rio Tinto Annual Report 2014.

Credit risks

Details of our exposure to credit risks relating to receivables, financial instruments and cash deposits, are contained within note 30 Financial instruments and risk management of the Rio Tinto Annual Report 2014.

Disposals and acquisitions

Information regarding disposals and acquisitions is provided in note 37 Purchases and sales of subsidiaries, joint ventures, associates and other interests in businesses of the Rio Tinto Annual Report 2014.

Critical accounting policies and estimates

Many of the amounts included in the financial statements involve the use of judgment and/or estimates. These judgments and estimates are based on management's best knowledge of the relevant facts and circumstances, having

regard to previous experience, but actual results may differ from the amounts included in the financial statements.

Information about such judgments and estimation is contained under Judgments in applying accounting policies and key sources of estimation uncertainty in note 1 Principal accounting policies on pages 110 and 111 of the Rio Tinto Annual Report 2014.

Off balance sheet arrangements and contractual commitments

The table below presents information in relation to our material off balance sheet arrangements and contractual commitments. Information regarding the Group's post retirement commitments and funding arrangements is provided in note 45 Post retirement benefits to the Rio Tinto Annual Report 2014. Information regarding the Group's close-down and restoration obligations is provided in note 26 Provisions (including post-retirement benefits) to the Rio Tinto Annual Report 2014.

Table of Contents

We expect that these contractual commitments for expenditure, together with other expenditure and liquidity requirements, will be met from internal cash flow and, to the extent necessary, from the existing facilities.

At 31 December 2014	<1 yr US\$m	1-3 yrs US\$m	3-5 yrs US\$m	> 5 yrs US\$m	Total US\$m

10.E Taxation

US residents

The following is a summary of the principal UK tax, Australian tax and US Federal income tax consequences of the ownership of Rio Tinto plc ADSs, Rio Tinto plc shares and Rio Tinto Limited shares, the Group's ADSs and shares, by a US holder as defined below. It is not intended to be a comprehensive description of all the tax considerations that are relevant to all classes of taxpayer. Future changes in legislation may affect the tax consequences of the ownership of the Group's ADSs and shares.

It is based in part on representations by the Group's depositary bank as depositary for the ADRs evidencing the ADSs and assumes that each obligation in the deposit agreements will be performed in accordance with its terms.

You are a US holder if you are a beneficial owner of the Group's ADSs and shares and you are: a citizen or resident of the US; a domestic corporation; an estate whose income is subject to US federal income tax regardless of its source; or a trust if a US court can exercise primary supervision over the trust's administration and one or more US persons are authorised to control all substantial decisions of the trust.

This section applies to US holders only if shares or ADSs are held as capital assets for tax purposes. This section does not apply to shareholders who are members of a special class of holders subject to special rules, including a dealer in securities, a trader in securities who elects to use a mark-to-market method of accounting for securities holdings, a tax exempt organisation, a life insurance company, a person liable for alternative minimum tax or net investment income tax, a person that actually or constructively owns five per cent or more of Rio Tinto's voting stock, a person that holds shares or ADSs as part of a straddle

Table of Contents

or a hedging or conversion transaction, persons that have ceased to be US citizens or lawful permanent residents of the United States, investors holding shares or ADSs in connection with a trade or business conducted outside of the United States, US expatriates or a person whose functional currency is not the US dollar.

This section is based on the US Internal Revenue Code of 1986, as amended (the Code), its legislative history, existing and proposed regulations, published rulings and court decisions, and on the convention between the US and UK, and the convention between the US and Australia (together, the Conventions) which may affect the tax consequences of the ownership of the Group's ADSs and shares. These laws and conventions are subject to change, possibly on a retroactive basis.

For the purposes of the Conventions and of the Code, US holders of ADSs are treated as the owners of the underlying shares.

The summary describes the treatment applicable under the conventions in force at the date of this report.

UK taxation of shareholdings in Rio Tinto plc

Taxation of dividends

US holders are not liable to UK withholding tax on dividends paid by Rio Tinto plc. Dividends carry a tax credit equal to one-ninth of the net dividend, or ten per cent of the net dividend plus the tax credit. The tax credit is not repayable to US holders.

Capital gains

A US holder will not normally be liable to UK tax on capital gains realised on the disposition of Rio Tinto plc ADSs or shares unless the holder carries on a trade, profession or vocation in the UK through a permanent establishment in the UK and the ADSs or shares have been used for the purposes of the trade, profession or vocation or are acquired, held or used for the purposes of such a permanent establishment.

Inheritance tax

Under the UK/US Estate Tax Treaty, a US holder, who is domiciled in the US and is not a national of the UK, will not be subject to UK inheritance tax upon the holder's death or on a transfer during the holder's lifetime, unless the ADSs and shares form part of the business property of a permanent establishment in the UK or pertain to a fixed base situated in the UK used in the performance of independent personal services. In the exceptional case where ADSs or shares are subject both to UK inheritance tax and to US Federal gift or estate tax, the UK Estate Tax Treaty generally provides for tax payments to be relieved in accordance with the priority rules set out in the Treaty.

Stamp duty and stamp duty reserve tax

Transfers of Rio Tinto plc ADSs will not be subject to UK stamp duty provided that the transfer instrument is not executed in, and at all times remains outside, the UK. Electronic paperless purchases of Rio Tinto plc shares are subject to stamp duty reserve tax (SDRT) at a rate of 0.5 per cent (rounded to the nearest penny). Purchases of Rio Tinto plc shares using a stock transfer form are subject to Stamp Duty at a rate of 0.5 per cent on transactions over £1,000 (rounded up to the nearest £5). Conversions of Rio Tinto plc shares into Rio Tinto plc ADSs will be subject to additional Stamp Duty or SDRT at a rate of 1.5 per cent (rounded to the nearest penny) on all transfers to the depositary or its nominee.

Australian taxation of shareholdings in Rio Tinto Limited

Taxation of dividends

US holders are not normally liable to Australian withholding tax on dividends paid by Rio Tinto Limited because such dividends are normally fully franked under the Australian dividend imputation system, meaning that they are paid out of income that has borne Australian income tax. Any unfranked dividends would suffer Australian withholding tax which under the Australian income tax convention is limited to 15 per cent of the gross dividend.

Table of Contents

Capital gains

US holders are not normally subject to any Australian tax on the disposal of Rio Tinto Limited ADSs or shares unless they have been used in carrying on a trade or business wholly or partly through a permanent establishment in Australia, or the gain is in the nature of income sourced in Australia.

Gift, estate and inheritance tax

Australia does not impose any gift, estate or inheritance taxes in relation to gifts of shares or upon the death of a shareholder.

Stamp duty

An issue or transfer of Rio Tinto Limited shares does not require the payment of Australian stamp duty.

US federal income tax

In general, taking into account the earlier assumptions that each obligation of the Deposit Agreement and any related agreement will be performed according to its terms, for US federal income tax purposes, if you hold ADRs evidencing ADSs, you will be treated as the owner of the shares represented by those ADRs. Exchanges of shares for ADRs, and ADRs for shares, generally will not be subject to US federal income tax.

Taxation of dividends

Under the US federal income tax laws, and subject to the Passive Foreign Investment Company (PFIC) Rules discussed below, if you are a US holder, the gross amount of any dividend the Group pays out of its current or accumulated earnings and profits (as determined for US federal income tax purposes) is subject to US federal income taxation.

Rio Tinto plc dividends paid to a non-corporate US holder generally will be taxable at the reduced rate normally applicable to long-term capital gains provided certain requirements are met. Rio Tinto Limited dividends paid to a non-corporate US holder generally will be taxable at the reduced rate normally applicable to long-term capital gains provided that Rio Tinto Limited qualifies for the benefits of the convention between the US and Australia, which Rio Tinto Limited believes it does, and certain other requirements are met. A US holder will be eligible for this reduced rate only if it has held the shares or ADSs for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date.

You must include any Australian tax withheld from the dividend payment in this gross amount even though you do not in fact receive it. The dividend is taxable to you when you, in the case of shares, or the depository, in the case of ADSs, receive the dividend, actually or constructively. The dividend will not be eligible for the dividends-received deduction generally allowed to US corporations in respect of dividends received from other US corporations. The amount of the dividend distribution that you must include in your income as a US holder will be the US dollar value of the non-US dollar payments made, determined at the spot UK pound/US dollar rate (in the case of Rio Tinto plc) or the spot Australian dollar/US dollar rate (in the case of Rio Tinto Limited) on the date the dividend distribution is includible in your income, regardless of whether the payment is in fact converted into US dollars. Generally, any gain or loss resulting from currency exchange fluctuations during the period from the date you include the dividend payment in income to the date you convert the payment into US dollars will be treated as ordinary income or loss and will not be eligible for the reduced tax rate normally applicable to capital gains. The gain or loss generally will be

income or loss from sources within the US for foreign tax credit limitation purposes. Distributions in excess of current and accumulated earnings and profits, as determined for US federal income tax purposes, will be treated as a non-taxable return of capital to the extent of your basis in the shares or ADSs and thereafter as capital gain.

Subject to certain limitations, any Australian tax withheld in accordance with the convention between the US and Australia and paid over to Australia will be creditable or deductible against your US federal income tax liability.

Table of Contents

For foreign tax credit purposes, dividends will generally be income from sources outside the US and will, depending on your circumstances, generally be either passive or general income which, in either case, is treated separately from other types of income for purposes of computing the foreign tax credit allowable to you.

Taxation of capital gains

Subject to the PFIC Rules discussed below, if you are a US holder and you sell or otherwise dispose of the Group's ADSs or shares, you will recognise capital gain or loss for US federal income tax purposes equal to the difference between the US dollar value of the amount that you realise and your tax basis, determined in US dollars, in your shares or ADSs. Capital gain of a non-corporate US holder is generally taxed at preferential rates where the holder has a holding period greater than one year. The gain or loss will generally be income or loss from sources within the US for foreign tax credit limitation purposes.

Passive Foreign Investment Company Rules

We believe that the Group's shares or ADSs should not be treated as stock of PFIC for US federal income tax purposes, but this conclusion is a factual determination that is made annually and thus may be subject to change. If we were to be treated as a PFIC, unless the shares or ADSs are marketable stock and a US holder elects to be taxed annually on a mark-to-market basis with respect to the shares or ADSs, gain realised on the sale or other disposition of the shares or ADSs would in general not be treated as capital gain. Instead, if you are a US holder, you would be treated as if you had realised such gain and certain excess distributions ratably over your holding period for the shares or ADSs and would be taxed at the highest tax rate in effect for each such year to which the gain was allocated, together with an interest charge in respect of the tax attributable to each such year. In addition, dividends that you receive from us will not be eligible for the reduced tax rates normally applicable to capital gains if we are a PFIC either in the taxable year of the distribution or the preceding taxable year, but instead will be taxable at rates applicable to ordinary income.

ITEM 12. DESCRIPTION OF SECURITIES OTHER THAN EQUITY SECURITIES

12.D American Depositary Shares

American depositary receipts (ADRs)

Rio Tinto plc has a sponsored ADR facility with JPMorgan Chase Bank NA (JPMorgan) under a Deposit Agreement, dated 13 July 1988, as amended on 11 June 1990, as further amended and restated on 15 February 1999, 18 February 2005 (when JPMorgan became Rio Tinto plc's depository) and on 29 April 2010. The ADRs evidence Rio Tinto plc ADSs, each representing one ordinary share. The shares are registered with the US Securities and Exchange Commission (SEC), are listed on the NYSE and are traded under the symbol RIO.

Table of Contents**Fees and charges payable by a holder of ADSs**

In accordance with the terms of the Deposit Agreement, JPMorgan may charge holders of Rio Tinto ADSs, either directly or indirectly, fees or charges up to the amounts described in the table below.

Category	Depository actions	Associated fee
Depositing or substituting the underlying shares	<p>Issuance of ADSs against the deposit of shares, including deposits and issuance in respect of:</p> <p>Share distributions, stock split, rights, merger</p> <p>Exchange of securities or other transactions</p> <p>Other events or distributions affecting the ADSs or the deposited securities</p>	US\$5.00 per 100 ADSs (or portion thereof) evidenced by the new ADSs delivered
Selling or exercising rights	Distribution or sale of securities, the fee being in an amount equal to the fee for the execution and delivery of ADSs which would have been charged as a result of the deposit of such securities	US\$5.00 for each 100 ADSs (or portion thereof)
Withdrawing an underlying share	Acceptance of ADSs surrendered for withdrawal of deposited securities	US\$5.00 for each 100 ADSs (or portion thereof) evidenced by the ADSs surrendered
Transferring, splitting or grouping receipts	Transfers, combining or grouping of depository receipts	US\$2.50 per ADS
General depository services, particularly those charged on an annual basis	<p>Other services performed by the depository in administering the ADRs</p> <p>Provide information about the depository's right, if any, to collect fees and charges by offsetting them against dividends received and deposited securities</p>	US\$0.02 per ADS (or portion thereof) not more than once each calendar year and payable at the sole discretion of the depository by billing holders or deducting such charge from one or more cash dividends or other cash distributions
Expenses of the depository	Expenses incurred on behalf of holders in connection with:	Expenses payable at the sole discretion of the depository by billing holders or by

<p>Compliance with foreign exchange control regulations or any law or regulation relating to foreign investment</p> <p>The depositary's or its custodian's compliance with applicable law, rule or regulation</p> <p>Stock transfer or other taxes and other governmental charges</p> <p>Cable, telex, facsimile and electronic transmission/delivery</p> <p>Expenses of the depositary in connection with the conversion of foreign currency into US dollars (which are paid out of such foreign currency)</p> <p>Any other charge payable by the depositary or its agents</p>	<p>deducting charges from one or more cash dividends or other cash distributions</p>
---	--

Fees and payments made by the depositary to the issuer

JPMorgan has agreed to reimburse certain company expenses related to the Rio Tinto plc ADR programme and incurred by the Group in connection with the programme. The Group received US\$1.05 million in respect of expenses incurred by the Group in connection with the ADR programme for the year ended 31 December 2014. JPMorgan did not pay any amount on the Group's behalf to third parties. JPMorgan also waived certain of its standard fees and expenses associated with the administration of the programme relating to routine programme maintenance, reporting, distribution of cash dividends, annual meeting services and report mailing services.

Under certain circumstances, including removal of JPMorgan as depositary or termination of the ADR programme by the Company, the Company is required to repay JPMorgan any amounts of administrative fees and expenses waived during the 12-month period prior to notice of removal or termination.

Report of Independent Registered Public Accounting Firm

To the Boards of Directors and Shareholders of Rio Tinto plc and Rio Tinto Limited

In our opinion, the accompanying Group balance sheet and the related Group income statement, the Group statement of comprehensive income, the Group cash flow statement, the Group statement of changes in equity, present fairly, in all material respects, the financial position of the Rio Tinto Group at 31 December 2014 and 2013, and the results of their operations and their cash flows for each of the three years in the period ended 31 December 2014 in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board. Also, in our opinion, the Rio Tinto Group maintained, in all material respects, effective internal control over financial reporting as of 31 December 2014, based on criteria established in *Internal Control - Integrated Framework 2013* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Rio Tinto Group's management is responsible for these financial statements, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's report on internal control over financial reporting. Our responsibility is to express opinions on these financial statements and on the Rio Tinto Group's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

Table of Contents

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that: (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.
