Enclosure: Press release – ANGLOGOLD ASHANTI REPORT FOR THE QUARTER AND NINE MONTHS ENDED 30 SEPTEMBER 2008

**Quarter 3 2008  
Report  
for the quarter and nine months ended 30 September 2008  
Group results for the quarter....**

- Delivery for the third consecutive quarter on production and cost guidance, with continued reduction in the hedge book.
- Production at 1.265Moz, 1% higher than previous quarter, with Obuasi and Cerro Vanguardia posting substantial improvements.
- Total cash costs at \$486/oz – better than guidance but higher than previous quarter due to wage increases, power tariffs, inflation and inventory movements – while costs are expected to reduce to approximately \$460/oz in the fourth quarter.
- Continuing safety focus, with lost time injury rate improving 10% and despite four fatalities during the quarter, the fatality rate reduced for the year by 60% against the same period in 2007.
- Uranium production up 7% to 346,000 pounds, with enhanced exposure to the spot market expected in the fourth quarter.
- Hedge book commitments reduced by 580,000oz during the quarter, with the company on track to reduce book to approximately 6.0Moz by year-end.
- Adjusted headline loss of \$119m incurred, as a result of accelerated hedge reduction.
- Greenfields exploration projects continue to make solid progress, particularly in Australia and Colombia.

Financial and **operating review**

**OVERVIEW FOR THE QUARTER**

After achieving an historic fatal-free second quarter, regrettably four employees lost their lives at three operations in the West Wits region in South Africa. At the Vaal River region, consisting of four operations, the region reported its second consecutive fatal-free quarter. This brings the fatal injury frequency rate (FIFR) to 0.10 per million hours worked for the quarter, and for the year to 0.08, compared with a rate of 0.20 for the same period in 2007, some 60% lower. The rate of 0.08 per million hours worked is also the lowest the company has achieved since inception and the company remains encouraged by the progress and commitment of all employees to ensuring that safety is our first value.

Safety indicators continue to show an improvement, with the lost time injury frequency rate (LTIFR) at 6.97 per million hours worked for the quarter, 10% lower than the prior quarter's performance. Four operations, Navachab, CC&V, Sunrise Dam and Morila, remained injury free. At the South African operations, the third quarter saw the lowest ever number of recorded dressing cases, with the LTIFR improving by 14.5% to 10.74 per million hours worked. Year to date, the group LTIFR was 7.44, 10% lower than that recorded for the same nine month period in 2007. For the quarter, gold production was 1% higher at 1.265Moz, reflecting improved production primarily from Argentina and Ghana. Total cash costs for the group increased as anticipated, from \$434/oz to \$486/oz, driven mainly by the annual wage increases in South Africa and Brazil, higher power tariffs in South Africa and Ghana, input cost inflation, inventory movements, which were partially offset by the higher gold production, favourable by-product contribution and depreciating local currencies. This was the third consecutive quarter that the company delivered on its production and cost guidance.

The South African operations were steady, with gold production marginally lower at 16,733kg, despite an increase in safety stoppages and nationwide strike action. The quarter saw Great Noligwa transfer its high grade upper level, SV4 section to Moab Khotsonq, as it undertakes a restructuring programme to right-size and align its cost structure to a reduced mine plan. The transfer enables the Moab Khotsonq mine to better exploit

operating synergies with the SV4 section. As a result of the transfer, Great Noligwa saw production decline 34%, while Moab Khotsonq increased 141%, in line with its ramp-up profile.

In the West Wits region, Mponeng had another strong quarter with gold production 3% higher, while Tau Lekoa posted a 9% increase in gold production, despite losing three shifts to safety stoppages and nationwide strike action. Both Kopanang and TauTona saw gold production reduce by 12%, following safety stoppages and nationwide strike action. Total cash costs for the South African operations increased 17% to R102,682/kg (\$411/oz), following marginally lower gold production, annual wage increases, winter power tariffs and inflationary impact on consumables.

Uranium production increased 7% during the third quarter to 346,000 pounds, with 294,000 pounds delivered into contracts, and 679,000 pounds of uranium on hand at the end of the quarter. Total uranium production for the year-to-date was 930,000 pounds, 3% higher than for the same period in 2007, notwithstanding the power-related production stoppages earlier in the year. As production progresses into the fourth quarter, an estimated 350,000 pounds of uranium inventory at year-end will be available for sale in the spot market.

In Argentina at Cerro Vanguardia, after two quarters of lower gold production, production increased 59% following higher feed grades and remedial action taken to rectify plant constraints.

In Brazil, gold production remained steady, with AngloGold Ashanti Brasil Mineração increasing 1% as a result of higher feed grades, while Serra Grande's production decreased 9%. Total cash costs for the Brazil operations were 4% higher at \$355/oz, due to annual wage increases and the inflationary impact on consumables.

At Geita and Tanzania, production remained steady at 74,000oz, with yield 5% lower, while tonnage throughput was 5% higher. Production was below expectations for the quarter following lower than expected recovered grades, reduced mining in the base of Cut 4 in the Nyankanga pit and an unplanned mill shutdown due to a crack in the SAG mill shell. As of mid-October repair work had been completed, with tonnage throughput expected to return to normal levels in November 2008.

In Ghana, Obuasi had a solid quarter, with gold production increasing 16% to 92,000oz, following improved delivered grades and higher throughput resulting from increased plant availability. Total cash costs however rose by 11% to \$677/oz, due to power tariff increases, higher fuel prices and contractor costs. Progress continues on identifying the steps necessary to affect the targeted performance turnaround for the operation.

This quarter once again saw the company take advantage of lower spot gold prices, with an additional 263,000oz delivered or settled into hedge contracts taking total reduction to 580,000oz. This brings the total hedge commitments down from 6.88Moz at the end of June 2008 to 6.30Moz at the end of September 2008, ahead of schedule of the year-end target of reducing hedge commitments to approximately 6.0Moz. Total hedge commitments have now reduced by 4.98Moz since the beginning of year, and the hedge delta has reduced from 6.54Moz at the end of June 2008 to 5.79Moz at the end of September 2008. The accelerated delivery will provide an improving exposure to spot prices in the fourth quarter, with the company on track to complete its substantial hedge restructuring by year-end.

During the quarter the company received a price of \$644/oz, 10% lower than the second quarter and 26% lower than the average spot price. As a result of the lower received price, higher operating costs and the accelerated hedge delivery of 263,000oz, an adjusted headline loss of \$119m was recorded. Excluding the hedge buy backs, the adjusted headline was breakeven, primarily due to the write down on the Geita stockpile and higher cash costs.

Greenfields exploration saw a total of 72,349m drilled during the quarter, as the company

capitalised on the first mover advantage in Australia and Colombia. The early stage exploration work suggests significant potential for the discovery of new gold and copper-gold deposits, in these emerging, potentially world-class terrains. During the quarter, significant and very encouraging drill results were returned from both regional and prospect-scale programmes, with the most noteworthy being the Black Dragon prospect, near the Tropicana JV project area in Australia. Good progress is also being made on joint venture projects with partners in Australia and Colombia.

For the fourth quarter of 2008, production, based on a 96.5% stabilised power in South Africa, was estimated to be 1.25Moz while total cash costs are expected to reduce to around \$460/oz, after adjusting for the winter power tariffs and inventory adjustments, based on the following exchange rates: R8.40/\$, A\$/0.80, BRL1.90/\$ and Argentinean peso 3.11/\$. Earnings for the fourth quarter are expected to be significantly distorted by, amongst other things, annual accounting adjustments such as rehabilitation, inventory, current and deferred tax provisions.

As at 30 September 2008, the company had unrestricted cash and cash equivalents of \$555m and \$294m of borrowing headroom available under its revolving credit facility. As a portion of the borrowings are in Australian dollars, this headroom should increase by approximately \$140m due to the prevailing weaker A\$/ exchange rate. AngloGold Ashanti's budgeted spend on the Boddington project for the remainder of the year is approximately A\$150m. In addition, the company had budgeted capital expenditures through the remainder of the year of some \$200m to \$255m and are currently reviewing these additional capital expenditures.

It was the company's intention to refinance the \$1.0bn convertible bond with the proceeds of a new equity linked instrument. However, global capital market conditions have been, and continue to be, disrupted and volatile and in recent weeks the volatility and lack of liquidity in global capital markets have reached unprecedented levels.

In light of these recent market conditions, the company is actively exploring a broader range of refinancing options, including bridge financing, further debt financing and additional asset sales, as well as reviewing discretionary capital expenditures.

#### **OPERATING RESULTS FOR THE QUARTER SOUTH AFRICA**

On 1 July 2008, **Great Noligwa** initiated a restructuring programme that resulted in the upper level high-grade SV4 section being transferred to and mined from Moab Khotsong. Easier access to the SV4 area from Moab Khotsong, as well as improved supervision and operational logistics underpins this decision, and in the process, optimises the asset infrastructure to maximise value. As a result of the SV4 transfer, gold production reduced by 34% or 1,021kg to 1,976kg (64,000oz), of which, the SV4 section would have accounted for approximately 1,200kg (39,000oz). The favourable variance is the consequence of improved mining activities, following an improved safety performance and fewer shifts lost to stoppages.

Due to the lower production, higher winter power tariffs and annual wage increases, total cash costs deteriorated by 40% to R149,915/kg (\$601/oz). The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives was R28m (\$3m), against a profit of R168m (\$21m) reported in the prior quarter. The LTIFR improved to 12.52 lost-time injuries per million hours worked (18.63 for the previous quarter).

**Kopanang** lost three shifts to safety stoppages and nationwide union action, resulting in mining volume decreasing 3%. In addition, lower mining grades and reduced vamping activities, resulted in yield declining 9% and subsequently, gold production dropped 12% to 2,627kg (84,000oz). As a result of the lower gold production, combined with the higher winter power tariffs and annual wage increases, total cash costs increased by 33% to R104,669/kg (\$419/oz).

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives was R57m (\$8m), against R197m (\$25m) recorded in the prior quarter.

The LTIFR improved to 11.86 (13.17).

As a result of the transfer of the SV4 production section to **Moab Khotsong** from Great Noligwa,

and continued build-up activities, mining volume increased significantly by 134%, with yield also improving by 4%. Gold production was consequently 141% or 1,246kg higher at 2,127kg (68,000oz), of which the SV4 section contributed approximately 1,200kg and build-up activities of 46kg. Total cash costs were 38% lower at R78,689/kg (\$316/oz), on the back of higher production.

The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives amounted to R27m (\$3m), against a loss of R3m (\$0) in the previous quarter.

The LTIFR improved to 12.83 (15.85).

At **Tau Lekoa**, despite three shifts lost to safety related stoppages and nationwide union action, volume and yield improved 4% and 5% respectively, due to further efficiencies and additional vamping activities. As a result, gold production was up 9% to 1,173kg (38,000oz), however, total cash costs increased 3% to R141,990/kg (\$568/oz) due to the higher winter power tariffs and annual wage increases.

The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives amounted to R16m (\$2m) against a profit of R26m (\$3m) in the previous quarter.

The LTIFR improved by 25% to 14.82 (19.89).

Gold production at **Mponeng** was 3% higher at 5,113kg (164,000oz), primarily due to the treatment of surface rock stockpiles. However, total cash costs increased 27% to R72,238/kg (\$289/oz), due to annual wage increases, higher winter power tariffs and inflationary pressure on consumables.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives was R382m (\$50m), against R507m (\$65m) in the previous quarter.

The operation, regrettably recorded one fatality for the quarter and the LTIFR deteriorated by 19% to 12.21 (10.23).

At **Savuka**, gold production declined by 15% to 481kg (15,000oz) mainly as a result of five shifts lost to safety stoppages and nationwide union action. Total cash costs were 37% higher at R150,256/kg (\$603/oz), primarily due to the annual wage increases, higher winter power tariffs and inflationary pressure on consumable items.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives amounted to R18m (\$2m), 13% higher than the previous quarter.

The LTIFR improved by 36% to 14.27 (22.40).

During the quarter, the operation recorded a fatal accident.

Gold production at **TauTona** was down 12% to 2,464kg (79,000oz) following reduced mining volume due to seismicity and safety concerns.

Total cash costs increased 31% to R110,722/kg (\$444/oz), as a result of the lower gold production, winter power tariffs and annual wage increases.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives amounted to R130m (\$17m), against R158m (\$20m) in the previous quarter.

The LTIFR improved to 12.49 (13.66).

Regrettably, there were two fatal accidents during the quarter.

Gold production from the **Vaal River Surface Operations** increased 35% over the previous quarter at 773kg (25,000oz), mainly due to an increase in waste rock dump tons as a result of lower delivered reef tons. Improved grades from the waste rock dump contributed to the increase in gold production. Total cash costs reduced 6% to R127,742/kg (\$513/oz) as a result of increased gold production.

Adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives amounted to R19m (\$3m), against R22m (\$3m) in the previous quarter.

The LTIFR deteriorated to 1.08 (0.60).

## **ARGENTINA**

At

**Cerro Vanguardia** (92.5% attributable)

production rose 59% to 43,000oz as a result of higher yield and increased volume, both the consequence of action taken to resolve last quarter's plant constraints. Total cash costs decreased 23% to \$666/oz as a result of higher gold produced and higher silver by-product contribution, which was partially offset by higher inflationary pressure and maintenance costs.

The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives was \$15m, against a loss of \$6m in the prior quarter.

The LTIFR was 1.56 (5.36).

#### **AUSTRALIA**

Gold production at **Sunrise Dam** was 1% higher at 115,000oz, following the completion of mining in the MegaPit during the quarter, resulting in an anticipated reduction in gold production by some 35,000oz in the next quarter. Total cash costs increased 19% to A\$699/oz (\$619/oz), due to stockpile movements and increased fuel costs, caused by a delay in converting the power station to liquid natural gas, following the Varanus Island gas explosion, which interrupted gas supplies throughout the state of Western Australia.

The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives amounted to A\$12m (\$10m) against a profit of A\$11m (\$10m) in the prior quarter.

During the quarter, production from the underground mine came predominantly from the Cosmo lode. A total of 592m of underground capital development and 1,614m of operational development were completed during the quarter.

The LTIFR was 0.00 (0.00).

## **BRAZIL**

At **AngloGold Ashanti Brasil Mineração**, production increased 1% to 83,000oz, as a result of higher feed grade from the Serrotinho and Fonte Grande Sul stopes at Cuiabá, together with improved fleet performance. Total cash costs rose 2% to \$331/oz primarily due to inflationary pressure and annual wage increases, partially offset by the higher gold production, local currency depreciation and higher by-product credit.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives was \$18m, against \$24m in the previous quarter.

The LTIFR was 2.67 (2.05).

At **Serra Grande**, (50% attributable) gold production decreased 9% to 20,000oz, primarily due to a change in the milling schedule that affected the phasing of gold production. Total cash cost increased 6% to \$324/oz, principally due to higher inflation, annual wage increases and inflationary pressure on consumable expenditure, partially offset by local currency depreciation.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives amounted to \$5m, against \$6m in the previous quarter.

The LTIFR was 1.60 (0.00).

## **GHANA**

At **Iduapriem** gold production increased 9% to 50,000oz as recovered grades normalised. Total cash costs increased 14% to \$563/oz, due to a substantial increase in power tariffs, together with inflationary pressures arising from the higher fuel price.

Adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives amounted to \$1m, against a profit of \$7m in the previous quarter.

LTIFR was 1.46 (1.51)

Gold production at **Obuasi** increased by 16% to 92,000oz, as both recovered grade and tonnage throughput improved 7%. An increase in development metres allowed for improved mining flexibility, which delivered higher grades and tonnage throughput, and in addition, the STP plant improved its recovery as a result of commissioning a larger regrind mill. Total cash costs however increased 11% to \$677/oz, due to a substantial increase in the power tariffs, together with higher fuel and contractor costs.

The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives amounted to \$22m, against a loss of \$8m in the previous quarter.

The LTIFR was 1.18 (0.6)

**REPUBLIC OF GUINEA**

At **Siguiri** (85% attributable) production decreased, as anticipated by 16% to 72,000oz, due to lower feed grade material being available for processing, but exceeded expectations. Total cash costs increased 22% to \$528/oz as a result of the lower production, as well as inflationary pressure on fuels and reagents.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives amounted to \$6m, against \$17m in the prior quarter.

LTIFR was 0.57 (0.57)

**MALI**

Gold production at **Morila** (40% attributable) was 17% lower than the previous quarter at 38,000oz due to a decrease in feed grades. Consequently, total cash costs increased 9% to \$463/oz. The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives of \$5m was \$7m lower than the previous quarter due to the lower gold production and a lower received price.

The LTIFR was 0.00 (0.00).

At **Sadiola** (38% attributable), production was 9% lower at 41,000oz due to a reduction in both recovered grade (6%) and tonnage throughput (4%). Recovered grade decreased as a result of medium grade oxide ore blend, while throughput was impacted by mechanical failures that reduced plant availability. Despite the lower production, total cash costs decreased 2% to \$398/oz due to a decrease in reagent usage, following improved ore blending processes.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives decreased to \$4m, against \$7m in the prior quarter.

The LTIFR was 0.91 (0.00).

Production at **Yatela** (40% attributable) increased 20% to 18,000oz due to an increase in recovered grades, resulting from stacking of higher feed grade material in the previous quarter. Total cash costs were 10% higher at \$631/oz mainly due to ore inventory movements during the quarter.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives declined by \$3m to break even, primarily as a result of the lower gold price received.

The LTIFR was 4.76 (0.00).

#### **NAMIBIA**

Gold production at **Navachab** increased 6% to 17,000oz, as volume increased, following the implementation of continuous shifts and improved drilling. Total cash costs were 10% lower at \$539/oz, primarily as a result of the higher gold production and lower royalty costs.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives was \$1m, against a break-even position in the previous quarter.

The LTIFR remained 0.00 (0.00).

#### **TANZANIA**

At **Geita**, gold production was flat at 74,000oz, with a 5% decrease in yield, offset by a 5% increase in tonnage throughput. Tonnage throughput for the quarter was lower than initial estimates due to a crack in the SAG mill shell, which severely impacted the September 2008 production. Repair work was completed in October 2008 and tonnage throughput was expected to return to normal levels in November 2008.

Total cash costs were 11% higher at \$699/oz mainly due to the impact of higher fuel prices and

non-recurrence of a credit on taxes that was received in the previous quarter.

The adjusted gross loss normalised for the accelerated settlement of non-hedge derivatives amounted to \$44m, against \$4m in the prior quarter due to a lower received gold price, higher operating costs and an unfavourable ore stockpile adjustment in the quarter.

The LTIFR was 1.63 (0.94).

#### **NORTH AMERICA**

At Cripple Creek & Victor (CC&V) gold production increased 7% to 63,000oz due to a shortened leaching time. However, total cash costs increased 7% to \$321/oz, primarily due to inflationary pressures driven by rising fuel costs.

The adjusted gross profit normalised for the accelerated settlement of non-hedge derivatives of \$12m against \$19m in the prior quarter.

The LTIFR was 0.00 (0.00)

Notes:

All references to price received includes realised non-hedge derivatives.

In the case of joint venture and operations with minority holdings, all production and financial results are attributable to AngloGold

Ashanti.

Rounding of figures may result in computational discrepancies.

#### Review of the gold market

Global financial markets have, since quarter end, experienced unprecedented volatility and a flight to cash by investors across the board. The nature of the crisis and the extent of the associated deleveraging have meant that, while there has been some incremental buying of gold as a 'safe haven' asset, there has also been significant selling down, particularly on the Comex and other exchanges. Since quarter end, gold has fallen some 16% to \$729.60/oz.

Exchange Traded Funds (ETFs) have been less affected despite some selling, most notably in the period from 17 to 23 October, when the US-traded SPDR ETF saw 9.8t of redemptions, of which 8.58t took place within a 24-hour period on 22/23

October. These redemptions however represented only just over 1% of the total volume of gold held in the fund, which stood at a record 770.64t on 13 October.

The events post quarter followed an already volatile three months for gold prices, which saw a trading range of over \$250/oz, as the mood of the global financial markets swung from concerns about inflation to warnings of deflation and recession. During the quarter the gold price traded from a high of \$988/oz to a low of \$736/oz.

While gold traded to a high of \$988/oz by mid-July on fears of surging inflation and predictions that the oil price could reach \$200/barrel, subsequent fears of a slowdown in global growth, particularly in the European Community, coupled with a slowing of growth in China, led to a sharp sell-off in the base metals complex. This also led to a strengthening of the US dollar as many of the commodity index trades were unwound. This reversal in the fortunes of the US dollar weighed significantly on the gold price, which then traded to an 11 month low of \$736/oz.

This new-found strength and confidence in the US dollar was, however, short lived as sub-prime mortgage fears re-emerged. The news in early September that two government-sponsored enterprises, Fannie Mae and Freddie Mac, were technically insolvent, the issuing by the US Treasury of financial guarantees to those institutions and the prolonged period of uncertainty which followed these events, caused investors to unwind positions in all markets and return to cash. The gold market was not immune to this and there was a significant

liquidation of positions from ETF holdings. Despite the eventual approval by the US legislature of the Troubled Assets Relief Programme, the uncertainty and lack of confidence within financial markets remains and problems in financial markets are proving to be global. This has raised real fears that the global economy will slide into deflation and ultimately recession.

The average spot price for the quarter was \$869/oz, some 3% lower than the previous quarter's average. In Rand terms, the average gold price was R216,674/kg, as compared with the previous quarter's average of R224,023/kg.

#### **Investment Market**

ETF holdings continued to grow during July, peaking at 33Moz. However, the strengthening of the US dollar eventually forced the withdrawal of some of these investors and 3Moz of investments were redeemed through to August 2008. Post quarter end, this liquidation had all been recovered and holdings of gold ETF's had reached an all time high of 35Moz.

Though still in their infancy, the newly-launched ETF funds in India performed well and continued to attract investment from retail investors.

#### **Producer Hedging**

During the quarter under review there was no new producer hedging. Similarly there were no reports of any significant producer de-hedging through accelerated buybacks.

AngloGold Ashanti did continue its programme of de-hedging by accelerating the delivery into 263,000oz of hedge contracts from periods beyond the current quarter.

#### **Physical Demand**

In the volatile market situation of the third quarter, the focus in the gold market was primarily on the investment sector. This was reflected in the physical market, where coin sales in particular showed strong growth during the period and jewellery demand presented a more mixed picture.

#### **Jewellery Sector**

The period of relatively stable and low prices during the first two months of the quarter brought some recovery in demand in the largest gold jewellery market, India, particularly when viewed against the backdrop of poor consumption in the first half of the year. The recovery in demand experienced during this period would have been stronger, had it not

been for the depreciation of the rupee against the US dollar, which negated some of the impact of the gold price correction.

Overall during the quarter the Indian market is likely to show a year-on-year increase of approximately 22-24% over the same quarter in 2007.

The increasing volatility in the price evident from the last week of August 2008 onwards, with daily price fluctuations of between \$15/oz and \$20/oz, fostered a more cautious approach to the metal by Indian consumers and a slowing of consumption.

Post quarter, increased turmoil in global financial markets is having a mixed impact on the market.

Indian buying during the main festive season, which has already stretched from Ganesh in early September, through to Navratri in early October and traditionally extends to Diwali in late October, may dampened as growth in India slows, due to the tightening of money supply in response to higher inflation and global economic turmoil. Consumer confidence has also been eroded by global economic conditions, weaker stock markets and the frequency of terrorist attacks, including in the major cities of Bangalore, Mumbai and New Delhi.

Demand in the other major emerging markets of China and the Middle East was remarkably stable. In China, the investment sector showed significant increases in demand, while the jewellery sector was relatively static. The Olympic Games generally had a negative impact on retail spending, as Chinese consumers tended to stay at home during the Games.

The fundamentals for investment in gold, which in China also takes the form of jewellery, are however good, with stock markets experiencing significant difficulties and property starting to show signs of peaking. Bank savings registered a sharp increase, for the first time in recent years, and gold was likely to benefit from a mood favouring safe haven investments.

Demand in the Middle East was healthy although the main Eid at the end of Ramadan coincided with a period of more volatile prices. Local demand started to return to the market in Turkey, while tourist and export demand from both Turkey and the Gulf States remained low. Gold imports to the Turkish market increased overall by some 35% during the quarter.

In the US market, now the third largest globally after India and China, gold consumption experienced a decline in retail channels during the quarter, as

disposable incomes were eroded by fuel price increases and increasingly difficult economic circumstances. With the events which unfolded post quarter end, retailers have become even more cautious in restocking for the festive period, traditionally the highest period of demand in the US market, and a double digit decline in consumption for the period is anticipated unless there is a significant shift in fundamentals.

#### **Official Sector Sales**

The end of September brought to an end the fourth year of the second Central Bank Gold Agreement (CBGA). Sales for the period fell far short of the quota allocated, at a total of 343t against a 500t quota. These sales took place in a manner that was neutral to the market.

The current CBGA is now entering its fifth and final year. At this time it seems likely that the CBGA will be renewed, and that any gold sales by the IMF will also take place within the framework of the Agreement. The process of finalising IMF gold sales is however a lengthy one and it seems unlikely that actual sales will occur before early 2010.

#### **Currencies**

The Rand averaged R7.77/\$ for the quarter, marginally weaker as compared with the average of the previous quarter. Despite some unprecedented political events domestically, the Rand maintained its value against the US dollar during the quarter and managed a modest appreciation (4%) against the Euro.

Subsequent to the quarter end, the Rand has sold off, as have many of the emerging market currencies, as further evidence of de-leveraging by investors. Devaluation against the US Dollar has been significant, with the rand losing some 30% against the dollar since quarter end, closing at levels of around R11/\$ towards the end of October. The Australian dollar averaged A\$/\$0.89 for the quarter, however post the quarter end, the Australian dollar has experienced a severe sell off, depreciating some 34% from its highs of A\$/\$0.9849 earlier in the year, to its current levels of A\$/\$0.65. Similarly, the Brazilian Real has suffered an exodus of investment, falling to a low of BRL2.37/\$, a level last seen in the second quarter of 2006.

**Hedge position**

As at 30 September 2008, the net delta hedge position was 5.79Moz or 180t (at 30 June 2008: 6.54Moz or 204t), representing a further reduction of 0.75Moz for the quarter. The total commitments of the hedge book as at 30 September 2008 was 6.30Moz or 196t, a reduction of 0.58Moz from the position as at 30 June 2008.

The marked-to-market value of all hedge transactions making up the hedge positions was a negative \$2.97bn (negative R24.56bn), decreasing by \$0.56bn (R3.1bn) over the quarter. This value was based on a gold price of \$876.30/oz, exchange rates of R8.27/\$ and A\$/0.64 and the prevailing market interest rates and volatilities at that date.

The company's received price for the third quarter was \$644/oz, 26% below the average spot price for the same period. This was due to the continued acceleration of deliveries into contracts scheduled to mature in the fourth quarter and later. An additional 263,000oz was closed out in the third quarter in line with the stated objective of positioning the company to have greater exposure to the spot price.

As at 29 October 2008, the marked-to-market value of the hedge book was a negative \$2.21bn (negative R22.85bn), based on a gold price of \$744.60/oz and exchange rates of R10.32/\$ and A\$/0.64 and the prevailing market interest rates and volatilities at the time.

These marked-to-market valuations are in no way predictive of the future value of the hedge position, nor of future impact on the revenue of the company. The valuation represents the theoretical cost of buying all hedge contracts at the time of valuation, at market prices and rates available at that time. The following table indicates the group's commodity hedge position at 30 September 2008.

## **Exploration**

Total exploration expenditure inclusive of expenditure at equity accounted associates during the third quarter of 2008 amounted to \$47m (\$25m brownfields, \$22m greenfields), compared to \$52m (\$27m brownfields, \$25m greenfields) in the previous quarter.

### **BROWNFIELDS EXPLORATION**

In **South Africa**, surface drilling continued in the Project Zaaiplaats area, with borehole MZA9 and MMB5 reaching depths of 2,941m and 2,915m respectively. Surface drilling in the Moab North area continued with the long deflection of borehole MCY4 reaching a depth of 2,626m, and it is anticipated to intersect C Reef during the next quarter. Borehole MCY5 advanced to a depth of 3,129m but failed to intersect Vaal Reef and this has led to a revision of the structural interpretation. The hole was stopped and the rig has been moved to drill borehole MGR8 in the Zaaiplaats area. MGR8 has now advanced 349m.

At Iduapriem in **Ghana**, Mineral Resource conversion drilling at Ajopa continued, with 93 Reverse Circulation (RC) (8,937m) holes being drilled. The programme, including 2,775m Diamond Drilling (DDH), will be completed during the next quarter. At Obuasi, exploration continued with 4,415m of DDH drilling below 50 level and 1,758m of DDH Drilling above 50 Level.

In **Argentina** at Cerro Vanguardia, the exploration programme continued with 3,243m of DDH drilling and 24,079m of RC drilling, almost completing the planned 2008 definition drilling programme. A further 3,057m of DDH drilling was completed on accessing the underground mining potential. The interpretation of the hyperspectral survey was received and is being evaluated and environmental studies over the 10 new claims (El Volcan) were presented to the provincial authorities.

In **Australia**, at Boddington there were four rigs employed on the BGM Mineral Resource conversion and near mine exploration DDH programme. During the quarter, approximately 29,326m of DDH were drilled in 41 holes, bringing the total metres drilled to 85,131m from 114 holes. At Sunrise Dam, exploration successfully extended and increased the underground Mineral Resources, while continuing to investigate the deep-seated mineralisation to 1km vertically below the mine workings. This quarter, 9,310m of DDH was drilled from 37 holes, and a significant

mineralised shoot has been defined within the Dolly lodes, which was open at depth. Immediate opportunities have also been identified for open pit satellites within 10km of the mine. These opportunities, together with the underground targets, would remain the focus of the ongoing exploration programme.

In **Brazil**, at the Córrego do Sítio Sulphide Project, drilling continued with 9,830m being drilled from surface, 2,756m drilled from underground, together with 953m of underground development. At the Lamego project, 5,770m of surface drilling, 5,850m underground drilling and 1,031m of underground development was completed.

At Siguirí in **Guinea**, exploration continued to focus on conversion drilling at Sintroko South (situated 8km south of the mine) and was completed toward the end of the quarter. Preliminary evaluation of the new data indicates a significant increase in the Mineral Resource, compared to the previous model. Mining is planned to commence in early 2009. Further in-fill drilling was completed on the margins of the Séguélen (Kintinian) planned pit, and work commenced in the Combined Pits project, in the area of Tubani-Bidini. Delineation drilling in the Saraya project (Block 2, approximately 55km west of the current mine) was temporarily suspended because of poor access during the rainy season. Results from the drilling to date indicate extensions to the known mineralisation.

Also in Guinea, reconnaissance drilling of the Manguity soil anomaly, situated 35 km west of the current Siguirí operation, yielded wide low grade intersections. A number of geochemical soil sampling programmes are in progress. Infill sampling over the Manguity anomaly in Block 2, and extension sampling to the south of Saraya in Block 2 were completed, with encouraging results from both areas. New programmes were initiated

in the Naboun block of licenses (28km north of the mine), and in the Corridor Block (14km northwest of the mine). Sampling continued in Block 1 to the north of current mining operations. Encouraging results have been obtained from the sampling northwest, north and northeast of the Kintinian-Setiguia villages. All these new opportunities will be drill tested using aircore drilling.

At Geita in **Tanzania**, exploration activities concentrated in two areas, namely Area 3 (5,535m RC and 612m DDH) and Star and Comet (4,574m RC), where drilling indicated a northern extension to the ore zones. Drilling commenced at Mabe (660m RC) and 10 deep DDH holes were drilled to examine potential depth extensions of Lone Cone, Geita Hill and Nyankanga.

Aircore (AC) drilling (2,980m) commenced at Matandani NW to test for oxide potential. Reconnaissance RC drilling commenced at Nyamalembo with three holes being drilled. An airborne TEM survey was completed in July and a high resolution magnetic survey commenced in September.

At Morila in **Mali**, important and useful advances were made in understanding the relationship between selected structures, such as shears, considered to be important controls on gold mineralisation. Field work during the quarter was limited to selected core logging and pit mapping. At Sadiola, the Mineral Resource definition drilling was completed at Sekokoto Main, where an infill RC drill programme of 6,515m was drilled, and results are awaited. The Phase 10 diamond core drill programme for metallurgical testing of the deep sulphide orebody commenced with two rigs currently drilling.

Results from the DDH programme completed last quarter around the FE4 pit are still expected.

However, a revision to the geological and the Mineral Resource model is in progress.

The geological logging of the fence line drilled between FE3 pit and FE4 are in progress. A total of 11 diamond holes were completed, logged, sampled and assays received.

At Yatela, a total of 4,728m and 1,107m were drilled from 64 DDH and 16 RC holes at the Alamoutala and the North-western pits, respectively.

At Navachab in **Namibia**, RC drilling at Gecko was completed with a total of 10,818m being drilled. At Steenbok-Starling, 2,460m of follow up RC were

drilled; additional drilling would be completed once all the assay results had been received. The extension of the soil grid towards Ostrich and Giraffe returned disappointing results and no gold anomalies were identified. At Anomaly 16, 12,536m of exploration infill and advanced grade control holes had been completed.

A total of 4,704m of DDH drilling was undertaken as part of the infill programme on the Hanging and Footwall sheeted vein systems. RC drilling of 5,260m was done to the immediate north of the North Pit 2, where a northerly vein plunge extension was confirmed and encouraging intersections were achieved. Some of this drilling was also targeted at closing information gaps in the Eastern Push Back.

At Cripple Creek & Victor in the **United States**, a total of 333 holes and 69,498m had been completed so far during 2008. Drilling continued in the Main Cresson area, Schist Island, Squaw Gulch and near the old Victor Pads. In the high grade study a test mining case was successfully completed in the Cresson Mine

No holes were drilled for the High Grade Study as assays are pending for recent drilling. Assay results continue to be encouraging. .

#### **GREENFIELDS EXPLORATION**

Greenfields exploration activities continued in six countries (Australia, Colombia, China, the Philippines, Russia and the DRC). During the third quarter of 2008, a total of 72,349m of DDH RC) and AC drilling was completed at existing priority targets and delineating new targets in Australia, the DRC, Russia and Colombia.

In **Australia** on the Tropicana Joint Venture (JV) (AngloGold Ashanti 70%, Independence Group 30%) prefeasibility studies were continuing with completion expected in the second quarter of 2009. Work to date has focussed on a range of project dimensions from 3.5m to 6.5m tonnes per annum. The flowsheet options were well defined and

infrastructure options evaluated. A study programme was now being undertaken to optimise the dimensions and economics of the project.

Water exploration activities have identified the project water supply, located approximately 50km north northwest of the plant site. The main areas of ongoing assessment include the evaluation of power options for the project (including solar thermal power), and an update of the resource estimate, which is anticipated in the next quarter.

In parallel with the optimisation studies, exploration in the Tropicana JV moved away from drilling of the Tropicana/Havana deposit with regional exploration programmes now being accelerated. The work was focussed on high priority targets within trucking distance from the Tropicana/Havana project area.

The most significant results for the quarter come from the Black Dragon prospect (30 km north-east of Tropicana/Havana), where further prospecting and mapping was completed in conjunction with wide-spaced AC drilling under areas of cover.

Analysis of rock chip sampling returned spectacular results with results of up to 573g/t gold, and 87g/t of silver. These results are supported by significant AC results including 4m at 0.78g/t Au from surface and 4m at 0.3g/t Au from 20m. Black Dragon is a high priority target for RC drilling in the next quarter. Diamond drill hole BCD001 from Beachcomber, returned 0.5m at 66.52g/t Au from 89.3m, 0.7m at 10.46g/t Au from 97.8m and 0.85m at 6.12g/t Au from 156.7m. RC drilling had returned significant results from Rusty Nail with 3m at 8.83g/t Au while significant rock chip sampling results have been returned from Voodoo Child (45 km north-east of Tropicana/Havana).

During the quarter a total of 742 AC holes were drilled for 40,132m (1,446 holes and 75,571m YTD), 41 RC holes for 5,760m and 9 diamond drill holes for 1,474m (12 holes and 1,892m YTD).

A regional aeromagnetic survey was completed during the quarter, with high-resolution survey data now available over approximately 55% of the granted tenement package. This new geophysical data, and the acceleration in the rate of auger sampling over the project, would enable more rapid prospect generation across the JV holdings.

The Bronco Plains JV (AngloGold Ashanti earning 50.4%), also in the Tropicana Belt, was a farm-in and joint venture with Independence Group NL

and Image Resources NL on Image's 230km<sup>2</sup> Bronco Plains project, adjacent to the western margin of the AngloGold Ashanti/ Independence Group Tropicana project. AC drilling, of the approximately 10km long gold-in-soil anomaly peaking at 86 ppb gold would commence once regulatory approvals have been received.

The approximate 5,000km<sup>2</sup> Viking Project (AngloGold Ashanti 100%) is located southwest of the Tropicana Prospect within the same Albany-Fraser Foreland tectonic setting that hosts the 4Moz Tropicana/Havana gold deposit. Results by AngloGold Ashanti at Beachcomber and publicly reported by other explorers, adds credence to this belt being a strike-extensive new gold province. Two new tenement applications for approximately 900km<sup>2</sup> were made in the third quarter, and permits to enable exploration to commence in the fourth quarter had been granted.

In **Colombia** exploration, undertaken by AngloGold Ashanti and joint venture partners B2Gold Corp., Mineros S.A. and Glencore International, continued during the third quarter with activity on 33 projects and prospects with an average of 716 staff and contractors per day active in the field. AngloGold Ashanti activities focused on systematic reconnaissance and drill target definition work on targets in 6 departments in Colombia. Airborne geophysical surveys were completed over 3,107km

2

during the quarter.

AngloGold Ashanti exploration work at La Colosa remained suspended throughout the third quarter, due to unforeseen delays in the environmental approvals being granted, it was now anticipated that approvals would be received in the first quarter of 2009, at which time, pre-feasibility work would commence.

Joint Venture partner B2Gold Corp. continued resource delineation drilling at Gramalote, first phase drilling at Quebradona and continued reconnaissance and drill target definition work in three departments in Colombia. Mineros S.A.

were drilling at one target in Antioquia and conducted reconnaissance and drill target definition work at two other targets within the Segovia joint venture in the Antioquia department. Glencore continued drilling base metal targets and conducted reconnaissance work in three departments of Colombia.

DDH completed during the third quarter of 2008 on AngloGold Ashanti and partner's projects were 20,348m, bringing the total DDH on all Colombian projects to 51,547m at the end of the third quarter. In **China**, work on the Jinchanggou Project in Gansu Province focussed on follow-up of the robust gold in soil anomalies defined in the eastern (Dashuigou) and western (Hongchungou) tenements. A 5,000m DDH programme using man portable drill rigs would commence in the fourth quarter of 2008. Project generation activities and evaluation of opportunities are ongoing in Western and North Eastern China.

In the **Philippines**, final documentation is under review for the Mapawa tenement application area. In **Russia**, where AngloGold Ashanti operates in a joint venture alliance with Russian miner, Polymetal, exploration continued on three license areas (939km

2 ) during the quarter. A total of 7,986m of DDH has been completed for the year to date, of which the majority has been completed on the Veduga advanced exploration project, while a field staff of 93 were engaged in field activities on the three active projects.

The Bogunay project (42km 2

) was sold, while negotiations were ongoing for the sale of Anenskoye (11.8km

2 ) and Aprelkovskoye (161km

2 ). The generation of new project areas through data analysis remains a core task of the joint venture team.

In **Africa**, work during the third quarter concentrated on project generation and specific project reviews in West, Central and East Africa. In the **Democratic Republic of the Congo**, exploration activities continued, with a total of

2,532m of DDH completed around the Issuru and Mongbwalu resource areas. The best intersections were 3.42m at 33.46g/t from 88.42m from diamond drill hole RA273D and 4.69m at 10.59g/t from 158m, and 2.92m at 6.69g/t from 169.3m from DD266. During the third quarter regional exploration programmes were underway at Lodjo, Camp3, Petsi, Mont Tsi and Bunia West prospects. Geologic activities included soil sampling, regolith and geologic mapping, trenching and bench sampling at the historic Mont Tsi open pit. Encouraging results were obtained from trench samples at Lodjo, which include 9m at 3.08g/t including 2m at 10g/t from trench TR11LO. The airborne magnetic, radiometric (37,608km line) and EM (3,225km line) surveys which commenced in June 2008 were completed during the third quarter. To date a total of 5,550km<sup>2</sup> of aeromagnetic and 1,224km<sup>2</sup> of EM surveys had been completed at a total cost of \$1.85m enabling fast-tracking of the regional exploration programmes.

4

Represents the dividend declared and paid during the period.

*Rounding of figures may result in computational discrepancies.*

2

The impact of the diluted earnings (loss) per share is anti-dilutive and therefore equal to the basic earnings (loss) per share.

3

Calculated on the diluted weighted average number of ordinary shares.

**Notes**

**for the quarter and nine months ended 30 September 2008**

**1.**

**Basis of preparation**

The financial statements in this quarterly report have been prepared in accordance with the historic cost convention except for certain financial instruments which are stated at fair value. Except for the change in accounting policy described below and detailed in note 20, the group's accounting policies used in the preparation of these financial statements are consistent with those used in the annual financial statements for the year ended 31 December 2007 and revised International Financial Reporting Standards (IFRS) which are effective 1 January 2008, where applicable.

The group changed its accounting policy regarding accounting for incorporated joint ventures to provide more relevant financial data as returns from these investments are limited to dividends which is more representative of the income flows. Incorporated joint ventures were previously accounted for under the proportionate consolidation method. Comparative figures have been restated to conform to the changes in accounting policy.

The financial statements of AngloGold Ashanti Limited have been prepared in compliance with IAS34, JSE Listings Requirements and in the manner required by the South African Companies Act, 1973 for the preparation of financial information of the group for the quarter and nine months ended 30 September 2008.

*The pre-tax profit on disposal of the assets in the June 2008 quarter amounted to \$27 million (R217 million) relates to the remaining moveable and immovable assets of Ergo that was sold by the Company to a consortium of Mintails South Africa (Pty) Ltd/DRD South African Operations (Pty) Ltd Joint Venture. The transaction was approved by the Competition Commissioner during May 2008 and the Joint Venture will operate, for its own account, under the AngloGold Ashanti authorisations until the new order mining rights have been obtained and transferred to the Joint Venture.*

With effect 1 September 2008, AngloGold Ashanti acquired a 70% interest in the Gansu Joint Venture and effective 1 September 2007, AngloGold Ashanti acquired the remaining 15% minorities of Iduapriem.

**14. Derivatives**

During the September 2008 quarter the hedge book delta was reduced by 750,000oz. Accelerated deliveries into contracts scheduled to mature in the fourth quarter and later amounted to 263,000oz. During the June 2008 quarter the hedge book delta was reduced by 2.71Moz.

**15. Trade, other payables and deferred income**

The amount of \$1,588 million (R12,437 million) as at 30 June 2008 includes an accrual for the accelerated cancellation of non hedge derivative contracts amounting to \$1,009 million (R7,902 million). These accruals were cash settled during the month of July 2008.

Includes capital commitments relating to equity accounted joint ventures.

**Liquidity and capital resources:**

*To service the above capital commitments and other operational requirements, the group is dependent on existing cash resources, cash generated from operations and borrowing facilities.*

*Cash generated from operations is subject to operational, market and other risks. Distributions from operations may be subject to foreign investment and*

*exchange control laws and regulations and the quantity of foreign exchange available in offshore countries. In addition distributions from joint ventures are subject to the relevant board approval.*

*The credit facilities and other financing arrangements contain financial covenants and other similar undertakings. To the extent that external borrowings are required, the groups covenant performance indicates that existing financing facilities will be available to meet the above commitments. To the extent that any of the financing facilities mature in the near future, the group believes that these facilities can be refinanced.*

**18. Contingent liabilities**

AngloGold Ashanti's material contingent liabilities at 30 September 2008 are detailed below:

Groundwater pollution – South Africa – AngloGold Ashanti has identified a number of groundwater pollution sites at its current operations in South Africa, and has investigated a number of different technologies and methodologies that could possibly be used to remediate the pollution plumes. The viability of the suggested remediation techniques in the

local geological formation in South Africa is however unknown. No sites have been remediated and present research and development work is focused on several pilot projects to find a solution that will in fact yield satisfactory results in

South African conditions. Subject to the technology being developed as a remediation technique, no reliable estimate can be made for the obligation.

Deep groundwater pollution – South Africa – AngloGold Ashanti has identified a flooding and future pollution risk posed by deep groundwater, due to the interconnected nature of operations in the West Wits and Vaal River operations. AGA is involved in Task Teams and other structures to find long term sustainable solutions for this risk, together with industry partners and government. There is too little foundation for the accurate estimate of a liability and

thus no reliable estimate can be made for the obligation.

Provision of surety – South Africa – AngloGold Ashanti has provided sureties in favour of a lender on a gold loan facility with its affiliate Oro Africa (Pty) Ltd and one of its subsidiaries to a maximum value of R100m (\$12m). The suretyship agreements have a termination notice period of 90 days.

Sales tax on gold deliveries – Brazil – Mineração Serra Grande S.A. (MSG), the operator of the Crixas mine in Brazil, has received two tax assessments from the State of Goiás related to payments of sales taxes on gold deliveries for export, one for the period between February 2004 and June 2005 and the other for the period between July 2005 and May 2006. The tax authorities maintain that whenever a taxpayer exports gold mined in the state of Goiás, through a branch located in a different Brazilian State, it must obtain an authorisation from the Goiás State Treasury by means of

a Special Regime Agreement (Termo de Acordo re Regime Especial – TARE). The MSG operation is co-owned with Kinross Gold Corporation. AngloGold Ashanti Brasil Mineração Ltda. manages the operation and its attributable share

of the first assessment is approximately \$40m. Although MSG requested the TARE in early 2004, the TARE, which authorised the remittance of gold to the company's branch in Minas Gerais specifically for export purposes, was only granted and executed in May 2006.

In November 2006 the administrative council's second chamber ruled in favour of MSG and fully cancelled the tax liability related to the first period. The State of Goiás has appealed to the full board of the State of Goiás tax administrative council. The second assessment was issued by the State of Goiás in October 2006 on the same grounds as the first one, and the attributable share of the assessment is approximately \$24m. The company believes both assessments are in violation of Federal legislation on sales taxes.

VAT Disputes – Brazil – MSG received a tax assessment in October 2003 from the State of Minas Gerais related to sales taxes on gold allegedly returned from the branch in Minas Gerais to the company head office in the State of Goiás. The tax administrators rejected the company's appeal against the assessment. The company is now discussing the case at the judicial sphere. The company's attributable share of the assessment is approximately \$8m.

Tax Disputes – Brazil – Morro Velho and AngloGold Ashanti Brasil Mineração are involved in disputes with tax authorities. These disputes involve federal tax assessments including income tax, social contributions and annual property tax based on ownership of properties outside of urban perimeters (ITR) and the reimbursable value added tax on fixed assets. The amount involved is approximately \$22m.

#### **19. Concentration of risk**

There is a concentration of risk in respect of reimbursable value added tax and fuel duties from the Malian government:

- Reimbursable value added tax due from the Malian government amount to an attributable \$42m at 30 September 2008 (30 June 2008: attributable \$52m). The last audited value added tax return was for the period ended 30 June 2008 and at the balance sheet date an attributable \$31m was audited and \$11m is still subject to audit. The accounting processes for the unaudited amount are in accordance with the processes advised by the Malian government in terms of the previous audits.
- Reimbursable fuel duties from the Malian government amounts to an attributable \$7m at 30 September 2008 (30 June 2008: attributable \$7m). Fuel duty refund claims are required to be submitted before 31 January of the following year and are subject to authorisation by firstly the Department of Mining and secondly the Custom and Excise authorities. An attributable \$5m is still subject to authorisation by the authorities. The accounting processes

for the unauthorised amount are in accordance with the processes advised by the Malian government in terms of the previous authorisations. As from February 2006 all fuel duties have been exonerated.

The government of Mali is a shareholder in all the Malian entities. Management is in negotiations with the Government

of Mali to agree a protocol for the repayment of the outstanding amounts. The amounts outstanding have been discounted to their present value at a rate of 6.5%.

There is a concentration of risk in respect of reimbursable value added tax and fuel duties from the Tanzanian government:

- Reimbursable value added tax due from the Tanzanian government amounts to \$16m at 30 September 2008 (30 June 2008: \$15m). The last audited value added tax return was for the period ended 31 July 2008 and at the balance sheet date was \$15m. The accounting processes for the unaudited amount are in accordance with the processes advised by the Tanzanian government in terms of the previous audits. The outstanding amounts have been discounted to their present value at a rate of 7.8%.
- Reimbursable fuel duties from the Tanzanian government amounts to \$42m at 30 September 2008 (30 June 2008: \$41m). Fuel duty claims are required to be submitted after consumption of the related fuel and are subject to authorisation by the Customs and Excise authorities. Claims for refund of fuel duties amounting to \$14m have been audited and lodged with the Customs and Excise authorities, whilst claims for refund of \$28m have not yet been lodged. The accounting processes for the unauthorised amount are in accordance with the processes advised by the Tanzanian government in terms of the previous authorisations. The outstanding amounts have been discounted to their present value at a rate of 7.8%.

## **20. Change in accounting policy**

Effective 1 January 2008, the group changed its accounting policy for the accounting of jointly controlled entities. In terms of IAS 31 "Interests in Joint Ventures" the group previously proportionately consolidated jointly controlled entities. During the current year the group decided to change its accounting policy to account for these entities using the equity method, the alternative treatment permitted by IFRS. Management has concluded that the change in accounting policy will result in more reliable and relevant information and is in accordance with international trends in accounting. Comparative information in this report has been restated in order to reflect the adoption of the revised accounting policy for the accounting of jointly controlled entities.

## **21. Attributable interest**

On 1 July 2008, shareholders of Golden Cycle Gold Corporation approved the acquisition by AngloGold Ashanti, in an all share transaction that resulted in Cripple Creek & Victor Gold Mining Company Limited being fully owned by the company. Prior to this, AngloGold Ashanti held a 66.7% interest in CC&V in which it was entitled to receive 100%

of the cash flows from the operation until the loan, extended to the joint venture by AngloGold Ashanti USA Inc., was repaid.

## **22. Borrowings**

AngloGold Ashanti's borrowings are interest bearing.

## **23. Announcements**

On 31 July 2008, AngloGold Ashanti announced it had entered into a letter agreement with Eldorado Gold Corporation ("Eldorado") to acquire 100% of Eldorado's wholly owned subsidiary, São Bento Gold Limited ("SBG"), which company in turn wholly owns São Bento Mineração S.A. ("SBMSA") for a consideration of \$70m to be settled by the issue of AngloGold Ashanti shares to Eldorado ("the Transaction").

SBMSA holds the São Bento Mine ("São Bento"), a Brazilian gold operation located in the immediate vicinity of AngloGold Ashanti's proposed Córrego do Sítio Mine ("Córrego do Sítio"). Córrego do Sítio is part of AngloGold Ashanti Mineração Ltda and is located in the municipality of Santa Bárbara, Iron Quadrangle region of Minas Gerais State, Brazil. São Bento started its operations in 1986 and operated until January 2007, at which time São Bento's process plant and facilities were placed on care and maintenance.

The Transaction is subject to the execution and delivery of all definitive agreements necessary to implement the Transaction and the receipt of all necessary regulatory, ministerial and other government approvals in South Africa and Brazil including the approval of the South African Reserve Bank and the SDE-CADE antitrust approval in Brazil.

On 17 October 2008 AngloGold Ashanti announced that it has been notified of an unsolicited below-market “mini-tender offer” by TRC Capital Corporation of Toronto, Canada to purchase up to 4,000,000 American depositary shares (“ADSs”) of AngloGold Ashanti Limited (each of which represents one ordinary share). AngloGold Ashanti recommended against ADS holders tendering their ADSs in response to this unsolicited mini-tender offer and cautioned shareholders that TRC Capital had made a multitude of below-market mini-tender offers for the shares of other companies for its profit.

#### **24. Dividend**

Interim dividend No. 104 of 50 South African cents or 3.4137 UK pence or 67.4 cedis per share was paid to registered shareholders on 29 August 2008, while a dividend of 1.459 Australian cents per CHESSE Depositary Interest (CDI) was paid on the same day. On 1 September 2008, a dividend of 0.0674 cedis per Ghanaian Depositary Share (GhDS) was paid to holders thereof. Each CDI represents one-fifth of an ordinary share, and 100 GhDSs represents one ordinary share. A dividend was paid to holders of American Depositary Receipts (ADRs) on 8 September 2008 at a rate of 6.449 US cents per American Depositary Share (ADS). Each ADS represents one ordinary share.

In addition, directors declared Dividend No. E4 of 25 South African cents per E ordinary share, payable to employees participating in the Bokamoso ESOP and Izingwe Holdings (Proprietary) Limited. These dividends were paid on 29 August 2008.

*Rounding of figures may result in computational discrepancies.*

Based on risks and returns the directors consider that the primary reporting format is by business segment. The directors consider that there is only one business segment being mining, extraction and production of gold. Therefore the disclosures for the primary segment have already been given in the abbreviated financial statements. The secondary reporting format is by geographical analysis by origin.

*Rounding of figures may result in computational discrepancies.*

From time to time AngloGold Ashanti may publicly disclose certain "Non-GAAP" financial measures in the course of its financial presentations, earnings releases, earnings conference calls and otherwise.

*- The unrealised fair value change in contracts that are still open at the reporting date, as well as, the unwinding of the historic marked-to-market value of the position settled in the period;*

The group utilises certain Non-GAAP performance measures and ratios in managing its business and may provide users of this financial information with additional meaningful comparisons between current results and results in prior operating periods. Non-GAAP financial measures should be viewed in addition to, and not as an alternative for, the reported operating results or cash flow from operations or any other measure of performance prepared in accordance with IFRS. In addition, the presentation of these measures may not be comparable to similarly titled measures other companies use.

(2)

*Calculated on the basic weighted average number of ordinary shares.*

SA Rand million

(1)

*(Gain) loss on non-hedge derivatives and other commodity contracts in the income statement comprise the change in fair value of all non-hedge derivatives and other commodity contracts as follows:*

US Dollar million

*- Investment in hedge restructure transaction: During the hedge restructure in December 2004 and March 2005 quarters, \$83m and \$69m in cash was injected respectively into the hedge book in these quarters to increase the value of long-dated contracts. The entire investment in long-dated derivatives (certain of which have now matured), for the purposes of the adjustment to earnings, will only be taken into account when the realised portion of long-dated non-hedge derivatives are settled, and not when the short-term contracts were settled;*

*- The unrealised fair value change on the option component of the convertible bond; and*

**Nine months ended**

**Nine months ended**

*- The unrealised fair value change on the onerous uranium contracts.*

**Quarter ended**

*- Open positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the current reporting date; and*

*- Settled positions: The change in fair value from the previous reporting date or date of recognition (if later) through to the date of settlement.*

**Nine months ended**

*Headline (loss) earnings adjusted for the effect of unrealised non-hedge derivatives, other commodity contracts and fair value adjustments on convertible bond, is intended to illustrate earnings after adjusting for:*

**Gross profit adjusted for the gain (loss) on unrealised non-hedge derivatives and other commodity contracts**

**Nine months ended**

**Quarter ended**

*- In addition, during the June 2008 quarter the hedge book was reduced and contracts to the value of \$1,1bn was early settled. Following the sale of the investment in Nufcor International Ltd. (NIL) uranium contracts of 1m pounds were cancelled. The combined impact on earnings after taxation amounted to \$996m;*

4

The yield of Yatela and the Cripple Creek reflects gold placed/tonnes placed.

*Rounding of figures may result in computational discrepancies.*

1

The yield of TauTona, AngloGold Ashanti Brasil Mineração, Serra Grande and Obuasi represents underground operations.

3

The yield of Sunrise Dam and Siguiriri represents open-pit operations.

5

The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad.

**Yield - g/t**

**Gold produced - kg**

2

Prior to 1 September 2007 Iduapriem was reported on a 85% attributable basis.

4

The yield of Yatela and the Cripple Creek reflects gold placed/tonnes placed.

*Rounding of figures may result in computational discrepancies.*

**Yield - oz/t**

**Gold produced - oz (000)**

1

The yield of TauTona, AngloGold Ashanti Brasil Mineração, Serra Grande and Obuasi represents underground operations.

3

The yield of Sunrise Dam and Siguiriri represents open-pit operations.

5

The yield is calculated on gold placed into leach pad inventory / tonnes placed on to leach pad.

2

Prior to 1 September 2007 Iduapriem was reported on a 85% attributable basis.

Gross (loss) profit excluding the effect of unrealised non-hedge derivatives and other commodity contracts

1  
 Effective 1 September 2007, the minority shareholdings of the International Finance Corporation (10%) and Government of Ghana (5%) were acquired and Iduapriem is now fully owned by AngloGold Ashanti. Prior to 1 September 2007 Iduapriem was reported on a 85% attributable basis.  
 Adjusted gross (loss) profit normalised for accelerated settlement of non-hedge derivatives

Gross profit (loss) excluding the effect of unrealised non-hedge  
derivatives and other commodity contracts  
Adjusted gross profit normalised for accelerated settlement of  
non-hedge derivatives

Certain statements contained in this document, including, without limitation, those concerning AngloGold Ashanti's strategy to reduce its gold hedging position including the extent and effect of the hedge reduction, the economic outlook for the gold mining industry, expectations regarding gold prices, production, cash costs and other operating results, growth prospects and outlook of AngloGold Ashanti's operations, individually or in the aggregate, including the completion and commencement of commercial operations of certain of AngloGold Ashanti's exploration and production projects and completion of acquisitions and dispositions, AngloGold Ashanti's liquidity and capital resources and expenditure, including its intentions and ability to refinance its \$1 billion convertible bond, and the outcome and consequences of any pending litigation proceedings, contain certain forward-looking statements regarding AngloGold Ashanti's operations, economic performance and financial condition. Although AngloGold Ashanti believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of, among other factors, changes in economic and market conditions, success of business and operating initiatives, changes in the regulatory environment and other government actions, fluctuations in gold prices and exchange rates, and business and operational risk management. For a discussion of such factors, refer to AngloGold Ashanti's annual report on Form 20-F for the year ended 31 December 2007 dated 19 May 2008, which was filed with the Securities and Exchange Commission (SEC) on 19 May 2008. AngloGold Ashanti undertakes no obligation to update publicly or release any revisions to these forward-looking statements to reflect events or circumstances after the date of this document or to reflect the occurrence of unanticipated events. All subsequent written or oral forward-looking statements attributable to AngloGold Ashanti or any person acting on its behalf are qualified by the cautionary statements herein.
