CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

Certain statements contained in this Renewal Annual Information Form (AIF) and under the heading "Management's Discussion and Analysis" on pages 43 to 75 of the 2003 Annual Report and in other sections of such Annual Report, including statements which may contain words such as "anticipate", "could", "expect", "seek", "may", "intend", "will", "believe" and similar expressions, statements that are based on current expectations and estimates about the markets in which the Corporation operates and statements of the Corporation's belief, intentions and expectations about development, results and events which will or may occur in the future constitute "forward-looking statements" within the meaning of the "safe harbor" provision of the United States Private Securities Litigation Reform Act of 1995, and are based on certain assumptions and analysis made by the Corporation derived from its experience and perceptions. Forward-looking statements in this AIF include, but are not limited to, statements with respect to future capital expenditures, including the amount and nature thereof; oil and gas prices and demand; other development trends of the oil and gas industry; business strategy; expansion and growth of the Corporation's business and operations, including the Corporation's market share and position in the domestic and international drilling and oilfield service markets; and other such matters. In addition, other written or oral statements which constitute forward-looking statements may be made from time to time by and on behalf of the Corporation. Such forward-looking statements are subject to important risks, uncertainties, and assumptions which are difficult to predict which affect the Corporation's operations, including: the impact of general economic conditions in Canada, the U.S. and in other countries in which the Corporation currently does business; industry conditions, including the adoption of new environmental and other laws and regulations and changes in how they are interpreted and

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

enforced; volatility of oil and gas prices; oil and gas product supply and demand; risks inherent in the Corporation's ability to generate sufficient cash flow from operations to meet its current and future obligations; increased competition; the lack of availability of qualified personnel or management; labor unrest; fluctuation in foreign exchange or interest rates; stock market volatility; opportunities available to or pursued by the Corporation and other factors, many of which are beyond the control of the Corporation. The Corporation's actual results, performance or achievements could differ materially from those expressed in, or implied by, these forward-looking statements and, accordingly, no assurance can be given that any of the events anticipated by the forward-looking statements will transpire or occur, or if any of them do so, what benefits, including the amount of proceeds, the Corporation will derive therefrom. The Corporation disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

CORPORATE STRUCTURE OF PRECISION DRILLING CORPORATION

INCORPORATION INFORMATION

Precision Drilling Corporation (the Corporation or Precision) was originally incorporated on March 25, 1985, amalgamated with two wholly owned subsidiary companies on January 1, 2000; on January 1, 2002 was amalgamated with one wholly owned subsidiary and on January 1, 2004 was amalgamated with one wholly owned subsidiary, all pursuant to Articles of Amalgamation and other provisions of the Business Corporations Act of Alberta. The Corporation maintains its head office and principal place of business at 4200, 150 - 6th Avenue S.W., Calgary, Alberta T2P 3Y7. The telephone number is (403) 716-4500, the facsimile number is (403) 264-0251 and the website address is www.precisiondrilling.com.

INTERCORPORATE RELATIONSHIPS

The following table sets forth the names of the Material Subsidiaries (which includes major Limited Partnerships) of Precision, the percentage of shares (or interest) owned by it and the jurisdiction of incorporation or continuance of each such subsidiary (or partnership) as of December 31, 2003:

Name of Subsidiary or Partnership	Percentage Owned	Jurisdiction of Incorporation or Continuance
Precision Limited Partnership	100%	Alberta
Precision Drilling Technology Services Group Inc.	100%	Alberta
CEDA International Corporation	100%	Alberta
PD International Services Inc.	100%	Alberta
PD Holdings Mexicana, S. de R.L. de C.V.	100%	Mexico
PD Holdings (USA), L.P. Delaware	100%	
Computalog Holdings, Inc.	100%	Nevada
Precision Drilling Holdings, Inc. Delaware	100%	

GENERAL DEVELOPMENT OF THE BUSINESS

THREE YEAR HISTORY

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Precision provides oilfield and industrial services to customers in Canada, the U.S., Mexico and internationally. For more than the last three years, the Corporation has been the leading provider, in Canada, of land drilling services to oil and gas exploration and production companies, based on the number of wells and metres drilled. Additionally, the Corporation provided the following during 2003: well service rigs and hydraulic well assist snubbing units; procurement and distribution of oilfield supplies; camp and catering services; manufacture, sale and repair of drilling equipment; open hole logging, cased hole logging and completion services, slickline services, directional drilling services; measurement-while-drilling (MWD) and logging-while-drilling (LWD) services; the manufacture, rental and sale of polycrystalline diamond compact (PDC) drill bits; controlled pressure drilling services (CPD) and well testing services; the design, manufacture, rental and sale of downhole completion products; pressure pumping and coiled tubing services; rental of mobile combination office and industrial housing; rental of surface oilfield equipment for drilling, completion and production activities; and also provided industrial maintenance and turnaround services, including specialized equipment and labour services, to downstream oil and gas, petrochemical and other process industry customers.

During the fourth quarter 2003, two product lines within the Technology Services segment, namely pressure pumping services and the rental and sale of downhole completion products, were identified as being not core to the segment's ongoing growth initiatives. As a result a program was initiated to dispose of these businesses. Results of operations of these businesses were classified as results of discontinued operations at December 31, 2003.

Effective February 12, 2004, Precision sold the operating assets of Fleet Cementers, Inc. (Fleet), the wholly owned subsidiary that carried on the pressure pumping business. Effective as of March 29, 2004, an agreement was entered into to sell the assets of Polar Completions, representing the rental and sale of downhole completion products business of the Corporation.

The Corporation has grown primarily through a series of acquisitions of related businesses as well as reinvestment in its core business to become the largest Canadian integrated oilfield and industrial service contractor. Over the past three fiscal years, the Corporation has reinvested substantially all of its cash flow from operations to grow its service and product offerings. In the year ended December 31, 2003, 18% of the Corporation's revenue was generated by operations outside of Canada and the U.S.

Since January 1, 2001, the Corporation has made a number of acquisitions and dispositions as follows:

In January 2001, the Corporation acquired 100% of the shares of BecField Drilling Services Ltd. (BecField). BecField, with established operations in Europe and the Middle East, provided directional drilling and MWD services through its technical field and support personnel to both onshore and offshore oil and gas companies. It also owned an interest in Smart Stabilizer Systems Limited which was established to develop a new generation rotary steerable device used to steer a drill bit down hole.

Also in January 2001, Precision Drilling Technology Services Group Inc. (formerly Computalog Ltd.), acquired the shares it did not own of Computalog Europe GmbH. Thereafter, Computalog Europe GmbH and BecField Drilling Services GmbH merged and subsequently became Precision Drilling Technology Services GmbH. Precision Drilling Technology Services GmbH, a 100% owned subsidiary, supplies wireline, directional drilling, MWD, LWD, CPD, well testing services and PDC drilling bits throughout Europe.

In July 2001, Computalog U.S.A., Inc. acquired all of the issued and

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

outstanding shares of Premium Pump Services, Inc. (Premium). Premium provided pressure pumping services, including cementing, fracturing and other stimulation services in Texas. In December 2001, Premium was merged with Fleet, with the operations of both entities being carried on under Fleet.

In December 2001, Precision's wholly owned subsidiary, BecField, acquired the remaining outstanding shares it did not own of Smart Stabilizer Systems Limited and has since taken steps to complete the commercialization of the rotary steerable device.

On March 6, 2003 (but effective January 1, 2003), Precision Drilling Corporation sold 100% of the shares of Energy Industries Inc.

In May 2003 a wholly owned subsidiary of Precision sold its 50% interest in Equipment Rentals General Partnership and Oil Drilling & Exploration (Argentina) SA., both of which pertained to two rigs in Argentina.

On September 30, 2003, a wholly owned subsidiary of Precision sold its 49% interest in Computalog SA (Argentina) to an unrelated third party.

Since January 1, 2001, the Corporation has undertaken a number of internal reorganization transactions as follows:

In August 2001, Precision Drilling Limited Partnership was dissolved into Precision Limited Partnership (PLP), with the drilling operations continuing to operate as Precision Drilling (PD) and the well servicing operations

continuing to operate as Precision Well Servicing (PWS), and the hydraulic rig assist snubbing units continuing to operate as Live Well Service (Live), all as divisions of PLP.

In November 2001, the Four Lakes Precision Drilling Limited Partnership (FLPD) was formed as a 50% limited partnership with Alberta Treaty Six First Nations, to operate a jointly owned drilling rig, with a 100% owned subsidiary of the Corporation as General Partner. FLPD has engaged PD to operate the rig through an Operating Agreement.

In December 2001, Computalog Ltd. changed its name to Precision Drilling Technology Services Group Inc. (PDTSG).

On January 1, 2002, Precision was amalgamated with a wholly owned subsidiary to form and continue as Precision Drilling Corporation.

On January 1, 2003, Precision Drilling Technology Services Group Inc., Plains Perforating Ltd., Polar Completions Engineering Inc. and Northland Energy Corporation were amalgamated to form "new" Precision Drilling Technology Services Group Inc.

On April 8, 2003 Montero Oilfield Services Ltd. changed its name to "Precision Rentals Ltd."

On December 31, 2003, PD Holdings (USA), Inc. was converted from a Delaware Corporation to a Delaware limited partnership, and now operates under the name "PD Holdings (USA), L.P."

On January 1, 2004, Precision was amalgamated with a wholly owned subsidiary to continue as Precision Drilling Corporation.

SIGNIFICANT ACQUISITIONS AND SIGNIFICANT DISPOSITIONS

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

There were no significant acquisitions or dispositions during 2003.

TRENDS

As illustrated above, crude oil and natural gas prices have historically been quite volatile. Oil prices, which during 2003 averaged US\$31.10 per barrel for West Texas Intermediate (WTI), are the result of political instability in some OPEC member nations (Venezuela, Iraq and Nigeria) and from a generally improving world economy with energy demand growth particularly strong in China and Southeast Asia. Another important factor in the crude oil pricing equation, and one that has seen a fundamental change from past pricing scenarios, is the value of the U.S. dollar. Since oil prices are denominated in U.S. dollars around the world, the devaluation of the U.S. dollar that has occurred over the past year has implications for both the seller and buyer of the commodity. Oil producing nations, with OPEC members taking the lead in controlling supplies and prices, are motivated to see an increase in the U.S. dollar price of oil to maintain their purchasing power in other currencies such as the Euro. From a buyer's perspective, the devaluation of the U.S. dollar has made oil a cheaper commodity for those who spend Euros and Japanese Yen, for instance, thus supporting the increased demand.

The supply and demand fundamentals that have brought commodity prices to today's relatively high levels are not expected to change rapidly. Energy price prognosticators have historically focused on the supply side of the equation where geopolitical events can have a large impact on short-term supply and where consensus was generally that there was an abundant supply to fill long-term requirements. This view is now starting to be questioned by some pricing analysts. The surplus crude oil production capacity of the Middle East is being examined with suggestions that it is not as high as once thought. Similarly, the ability to rapidly increase production of the vast crude oil reserves in the former Soviet Union is being slowed by the recognition of the large amount of infrastructure investment required to bring these reserves to market. Recent world events have also brought security of supply issues to the top of the energy agenda for many countries.

North American natural gas prices are also being supported by strong fundamentals. Demand has been increasing with recent economic growth while supply from relatively mature producing basins is starting to decline. The near record gas drilling activity in 2003 served only to slow the decline in production reserves. High oil prices also served to support natural gas prices as the economic benefit of switching between the two fuels is minimal. The importing of liquefied natural gas into the North American market, once thought to be the competitive product that would cause gas prices to decline, is now viewed by many industry analysts as a requirement to fill the gap between demand and conventional production capabilities. It is not anticipated that the price of natural gas will experience sustained downward pressure from the supply side of the pricing equation any time soon.

Many analysts are now looking at the demand elements of energy pricing economics. Commodity prices have risen over the last number of years in an environment where the major economies of the world were generally in a period of slow growth. This is changing as growth rates in the major industrialized countries are beginning to recover. Of particular importance to the outlook for the demand for energy is the emergence of countries such as China where economic expansion is bringing new found purchasing power to a very large population. On a per capita basis, these

populations use energy at a fraction of the rate of other industrialized

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

nations. This should change as new products, such as automobiles and electric appliances, are introduced to these markets which in turn should drive exponential growth in energy demand.

DESCRIPTION OF THE BUSINESS OF PRECISION

DESCRIPTION OF BUSINESS SEGMENTS

Precision's continuing operations are managed in three segments consisting of Contract Drilling, Technology Services and Rental and Production. Contract Drilling includes drilling rigs, service rigs, hydraulic well assist snubbing units, camp and catering services, procurement and distribution of oilfield supplies, and manufacture, sale and repair of drilling equipment. Technology Services includes wireline logging services, slickline services, directional drilling, measurement-while-drilling/logging-while-drilling (MWD/LWD) services, controlled pressure drilling (CPD), well testing, and the design and manufacture of PDC drill bits. Rental and Production includes oilfield equipment rental services and industrial maintenance.

Effective February 12, 2004, Precision sold the operating assets of Fleet, the wholly owned subsidiary that carried on the pumping services for cementing, fracturing and well stimulation, which business was carried on primarily in Texas. Precision has initiated the process of disposing of Polar Completions which carries on the design, manufacture, rental and sale of downhole completion and production equipment business. A definitive agreement dated March 29, 2004 was entered into to sell the Polar Completions assets, and it is anticipated that this transaction will close in early May 2004. Results of operations of these businesses have been classified as results from discontinued operations.

The Corporation's revenue by industry and geographic segments are illustrated in thousands in the following table:

YEARS ENDED DECEMBER 31,	2003	2002	2001
Contract Drilling	\$ 992,824	\$ 770,147	\$1,004,265
Technology Services	714,385	603,088	614,152
Rental and Production	210,724	192,840	194,567
Corporate and other	--	1,431	2,224
Total Revenue	\$1,917,933	\$1,567,506	\$1,815,208

YEARS ENDED DECEMBER 31,	2003	2002	2001
Canada	\$1,349,565	\$1,022,489	\$1,320,989
International	568,368	545,017	494,219
Total	\$1,917,933	\$1,567,506	\$1,815,208

The Corporation sells its services to oil and natural gas exploration and production companies. Macro economic and geopolitical factors associated with oil and natural gas supply and demand are the prime drivers for pricing and profitability within the energy services industry. Generally, when commodity prices are relatively high, demand for the Corporation's services is high, while the opposite is true when commodity prices are low. The markets for oil and natural gas are separate and distinct. Oil is a global commodity with a vast distribution network. Natural gas is most economically transported in its gaseous state via pipeline. Therefore, its market is dependent on pipeline infrastructure and is subject to regional supply and demand factors. Recent developments in the transportation of liquefied natural gas (LNG) in ocean going

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

tanker ships has introduced an element of globalization to the natural gas market. However, the volume capability of the world's LNG infrastructure is not expected to be large enough to influence pricing in North American markets for a number of years. As illustrated earlier, crude oil and natural gas prices are quite volatile, which accounts for much of the cyclical nature of the energy service business. The energy service business cycles are muted somewhat in non-North American markets where projects tend to be larger and more long term thus less susceptible to short term commodity price fluctuations.

The Corporation derived 70% of its revenue from the Canadian market in 2003. Energy service activity in Canada is subject to seasonal fluctuation. The ability to move heavy equipment in the Canadian oil and natural gas fields is dependent on weather conditions. As warm weather returns in the spring the winter's frost comes out of the ground rendering many secondary roads incapable of supporting the weight of heavy equipment until they have thoroughly dried out. The duration of "spring breakup" has a direct impact on the Corporation's activity levels. In addition, many exploration and production areas in northern Canada are accessible only in winter months when the ground is frozen hard enough to support equipment. The timing of freeze up and spring breakup affects the ability to move equipment in and out of these areas. Equally, wet weather can also defer commencement of drilling or servicing operations on any given day or well location.

CONTRACT DRILLING

This segment consists of three main categories of operations; Canadian Drilling, (which includes contract drilling support), International Drilling and Canadian Well Servicing, (which includes Live's snubbing operations).

Revenue generated by these operations is as follows:

Years ended December 31, (In thousands)	2003		2002	
	REVENUE	% OF	Revenue	% of
Canadian Drilling	\$ 654,572	66%	\$ 474,051	61%
International Drilling	114,131	11%	105,108	14%
Canadian Well Servicing	224,121	23%	190,988	25%
	\$ 992,824	100%	\$ 770,147	100%

CANADIAN DRILLING

The Corporation owns and operates the largest fleet of land drilling rigs in Canada, through Precision Drilling, a division of PLP, with 225 actively marketed rigs located throughout the Western Canada Sedimentary Basin (WCSB), accounting for approximately 33% of the actively marketed land drilling rigs in Canada.

Additionally, the operations of Contract Drilling may extend into the Rocky Mountain area of the U.S. when demand for drilling rigs is high and economic profit margin targets are attainable. Strategically, the Corporation's interest within this market is to serve the needs and requests of existing customers. To

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

this end, the rig fleet is mobile and responsive to opportunity. Based out of Casper, Wyoming, the Corporation's U.S. drilling business, operates through the legal entity Precision Drilling Oilfield Services, Inc., and as at December 31, 2003 it had one racked drilling rig and no active operations after running as many as five rigs during 2002. Subsequent to the year ended December 31, 2003, the lone remaining rig was sold.

Precision's land drilling rigs have varying configurations and capabilities which allows it to provide services in virtually all areas of drilling activity in the WCSB. Precision's rigs have drilling depth capacities of up to 7,600 metres. All of Precision's Canadian drilling rigs are winterized, allowing for operations in the harsh weather conditions faced in the Canadian drilling environment. Traditional rigs are configured to handle either one, two or three joints of range 2 drill pipe at one time and are categorized as singles, doubles or triples based on this capability. As well, Precision has coiled tubing drilling rigs which utilize a single strand of pipe coiled around a reel. As the rig drills, the coiled tubing is unwound and when the bit returns to surface the coiled tubing is rewound onto the reel. Except for connecting the bottom hole assembly, which usually includes the drill bit and a drilling fluid powered drilling motor, which provides the rotation for drilling, no other connections are necessary. As a result coil rigs can drill very fast at shallower depths. These rigs are well suited for shallow vertical drilling. They are compact, have a small footprint and can be made ready to move to new locations more quickly than conventional rigs.

Single, double and coiled tubing rigs are generally used in the shallow drilling market while triple rigs, which have greater hoisting capacity, are used in deeper exploration and development drilling which is usually carried out in western Canada's foothills and Rocky Mountain regions. The deeper rig fleet includes specialized rigs for deep sour gas well drilling and Arctic class rigs that, although currently operating in Alberta and British Columbia, are equipped to operate in very cold temperatures. The remaining rigs in Precision's fleet are Super Single rigs, which garner an industry market share of 83% within their rig class. The Super Single rigs are manufactured by Precision and are equipped with top-drive drilling systems, range 3 drill pipe and automated pipe handling and are capable of slant drilling.

Slant drilling involves tilting a rig mast from vertical and is primarily used to drill multiple directional wells from one location. In certain instances, Super Single rigs allow for drilling to be carried out on a more cost effective basis than using conventional drilling techniques. Drilling multiple wells from one location improves the economics of developing shallow heavy oil reserves in the WCSB. Additionally the same technique also allows for exploitation of reserves located in environmentally sensitive areas or inaccessible locations and eliminates the costs of building access roads for multiple drilling locations. Precision believes Super Single drilling rigs offer the potential for significant future revenue growth. Precision's Super Single drilling rigs have been further developed to meet operational needs in the development of oil sands production in northern Alberta.

Precision has taken a lead role in drilling numerous steam assisted gravity drainage (SAGD) projects that involve a centralized mud system and other innovative rig design features. SAGD is used extensively in the production of heavy oil reserves.

A total of 41 of Precision's drilling rigs are electrically powered and the remaining rigs mechanically powered. Diesel-electric powered rigs provide precise rotational control and are considered more power efficient than mechanical rigs. A diesel-electric rig is well suited for horizontal and directional drilling. Many of Precision's mechanically powered rigs are also capable of horizontal and directional drilling by equipping the rigs with additional equipment which Precision has readily available. Precision

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

continually seeks to upgrade and modify its rig fleet to

maximize performance. Precision works hard to remain abreast of, and in many cases, leads advances in specialized drilling techniques and technology to maximize power output and minimize environmental impact.

To facilitate customer requirements on moderate to deep wells, PD owns 16 mobile top drives. A top drive is used to rotate the drill string and provides greater efficiency in the drilling of a well compared to the traditional rotary table. A top drive is suspended in the mast of the drilling rig and is powered by a hydraulic or electric motor. All Super Single drilling rigs are equipped with a permanently mounted top drive as part of the rig inventory.

The following table lists the drilling depth capability of Precision's actively marketed drilling rigs and the total Canadian land drilling industry's rigs in the WCSB as at December 31, 2003. In addition, the capabilities of the segment's rigs operating outside Canada are listed.

CANADA					
Type of Drilling Rig	Drilling Depth Capability	PD Canada # of Rigs	% of Fleet	# of Rigs	Industry (2) % of Fleet
Single	1,200m	17	8	93	14
Super Single(R) (1)	2,500m	15	7	18	2
Double	3,000m	96	42	322	48
Light triple	3,600m	47	21	119	17
Heavy triple	7,600m	39	17	99	15
Coiled tubing	1,300m	11	5	24	4
Total		225	100	675	100

NOTES:

- (1) SUPER SINGLE(R) EXCLUDES RIGS THAT CANNOT DRILL SLANT, OR DO NOT HAVE AUTOMATED PIPE HANDLING SYSTEMS, OR DO NOT HAVE A SELF CONTAINED TOP DRIVE, OR CAN NOT RUN RANGE 3 DRILL PIPE/CASING.
- (2) SOURCE: CANADIAN ASSOCIATION OF OILWELL DRILLING CONTRACTORS (CAODC) AS OF DECEMBER 31, 2003 FOR TOTAL RIG COUNT PER CONTRACTOR SUMMARY SHEET ADJUSTED BY PRECISION TO INCLUDE NON REPORTING CONTRACTORS. PRECISION HAS ALLOCATED EACH COMPANY'S RIG FLEET BY CATEGORY - THIS IS NOT TRACKED BY CAODC. SURFACE HOLE RIGS AND WATER WELL RIGS ARE NOT INCLUDED ABOVE.
- (3) MARKET SHARE MEANS PRECISION'S RIGS AS A PERCENTAGE OF THE INDUSTRY'S RIGS.

Precision has consistently been the most active land drilling contractor in Canada as measured by metres and wells drilled. Since 1997, Precision has sustained a market share in those categories of greater than 30%. During 2003, Precision achieved a utilization rate of 52.0% for its drilling rigs compared to the average industry utilization rate in Canada of 53.1%. Precision's strategy with respect to its drilling operations emphasizes achieving an industry equivalent level of utilization for its equipment, thereby enabling Precision to

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

maintain a stable workforce and a high level of equipment maintenance. In periods of low equipment utilization, Precision may under-perform industry utilization in order to preserve reasonable profit margins in certain rig markets. Precision believes that its efficiently configured and well maintained drilling rigs should allow it to retain its leading role in the Canadian land drilling market.

For calendar year 2003, Precision drilled 8,451 exploration and development wells, accounting for 40.8% of industry wells in western Canada.

The following table lists the drilling rig utilization rates and certain other drilling statistics for Precision in Canada and the total Canadian land drilling industry in the WCSB for the years indicated in this table:

	Drilling Rig		Metres Drilled (000s)			Well
	Utilization Rates (%) (1)		% of (1)		PD	
	PD	Industry	PD	Industry		
2003	52.0	53.1	8,604	21,802	39.5	8,451
2002	38.3	39.4	6,222	15,708	39.6	6,315
2001	51.6	53.0	7,384	18,855	39.2	6,907
2000	52.5	55.2	6,771	18,242	37.1	6,143
1999	37.4	39.8	4,613	13,018	35.4	3,803

NOTES

- (1) INDUSTRY NUMBERS EXCLUDE DRILLING RIGS NOT REGISTERED WITH THE CANADIAN ASSOCIATION OF OILWELL DRILLING CONTRACTORS (CAODC) AND NON-REPORTING CAODC MEMBER CONTRACTORS.
- (2) THE NUMBER OF WELLS DRILLED IS REPORTED ON A RIG RELEASE BASIS.

Oil and gas well drilling contracts are carried out on either a daywork, meterage or turnkey basis. Under daywork contracts, Precision charges the customer a fixed charge per day regardless of the number of days needed to drill the well. In addition, daywork contracts usually provide for a reduced day rate (or a lump sum amount) for mobilization of the rig to the well location and for assembly and dismantling of the rig. Under daywork contracts, Precision ordinarily bears no part of the costs arising from downhole risks (such as time delays for various reasons, including a stuck or broken drill string or blowouts). Other contracts could provide for payment on a meterage basis, whereby Precision is paid a fixed charge for each metre drilled regardless of the time required or the problems encountered in drilling the well. Some contracts are carried out on a meterage basis to a specified depth and on a daywork basis thereafter. Turnkey contracts contemplate the drilling of a well for a fixed price. Compared to daywork contracts, meterage and turnkey contracts involve a higher degree of risk to Precision and, accordingly, normally provide greater profit or loss potential. Over the last five years, Precision's contracts have been carried out almost exclusively on a daywork basis except for the contract in the Burgos Basin of Mexico, which is being carried out on a turnkey basis for each well drilled.

In conjunction with its customers, PD is working to involve Canada's First Nations aboriginal people in the delivery of contract drilling services.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Precision's involvement with First Nations communities is directed towards local employment to meet oilfield service manpower needs and to foster the economic participation of aboriginals in commerce that is taking place in and around their traditional lands. The economic arrangements include joint ownership of one drilling rig through the Four Lakes Precision Drilling Limited Partnership and sponsorship based on rig activity to support community development in remote areas.

The Corporation owns three subsidiaries which provide support services to its contract drilling operations being Columbia Oilfield Supply Ltd., LRG Catering Ltd. and Rostel Industries Ltd.

Columbia Oilfield Supply Ltd. (Columbia) became a wholly owned subsidiary of Precision in 1997 and has been in business since 1977 as a general supply store to the oilfield service industry with drilling contractors as their main customers. Columbia's prime focus is to facilitate the consumable requirements of PD, PWS and the other subsidiaries of the Corporation. Increasingly, Columbia is being relied upon to procure and distribute specialty supply requirements for international contract drilling rig operations.

LRG Catering Ltd. (LRG) is a camp and catering company providing food and accommodations to the Canadian oil and gas drilling industry and became a wholly owned subsidiary of Precision in 1993. A typical drilling camp consists of a five or six-unit structure that can accommodate 20 field employees and feed up to 50 workers daily. Established in 1976, LRG has grown significantly over the past six years. Effective February 1, 2003 LRG acquired all of the operating assets of MacKenzie Caterers (1984) Ltd. namely, 17 camps complete with ancillary assets. LRG also added a new six unit electric camp in February 2003. As a result, the fleet grew by an additional 18 camps during 2003 and operated 88 quality camp facilities as at December 31, 2003. Most of LRG's business is in support of Precision's drilling rig operations.

Rostel Industries Ltd. (Rostel) was established in 1976 as a machining and fabricating shop and became a wholly owned subsidiary of Precision in 1996. Rostel provides drilling and service rig contractors in southern Alberta with complete equipment manufacture and repair services. The manufacture of drilling and service rig components is a core business for Rostel. It also repairs and certifies, as required, rig components such as crowns, handling tools, traveling blocks and blowout preventers. This business uniquely positions the Corporation as the only Canadian drilling contractor with in-house rig building capability.

INTERNATIONAL DRILLING

The international drilling operations of Precision, which are carried out through various international subsidiaries, are focused on expansion into countries where drilling opportunities fit the Corporation's niche capabilities, and where it can attain a strategic position in the near to medium term.

In 2003, Precision Drilling International continued its focus on delivering performance drilling as a key member of Precision's integrated services package providing turnkey drilling services in the Burgos region of Mexico. In 2003 a total of 176 wells were drilled by Precision in the Burgos region. In June 2003, Precision received a contract extension covering the provision of three additional drilling rigs bringing the total rig count in Mexico to 10, and adding approximately 186 wells to the existing contract.

In South America, international drilling continued to provide specialty drilling services to multinational oil companies, many of whom have strategic alliances with national oil companies. Five of the Corporation's drilling rigs were operational on contracts of lengths varying from one to five years. In April 2003, the Corporation's 50% interest in two additional drilling rigs located in South America and operated by a third party were sold.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

In the Middle East, the Corporation owns two drilling rigs, one of which is operated by a third party and is under contract until February 2006, and the second rig commenced drilling in November 2003.

In the Asia/Pacific region a Super Single rig was contracted continuously throughout 2003 and among its achievements drilled the first slant well in the region from a man-made island. Additionally, the Corporation was awarded a contract to construct and operate its first offshore platform mounted rig for the same operator, which commenced drilling in April 2004.

On April 1, 2004, the Corporation entered into an agreement with GlobalSantaFe Corporation which contemplates the acquisition by the Corporation of 31 land based drilling rigs located in the Middle East and Venezuela for a purchase price of US\$316,500,000. It is anticipated that the transaction should close near the end of May 2004.

CANADIAN WELL SERVICING

For the past three years, the Corporation has operated the largest fleet of services rigs in Canada. As a result of the acquisition of 18 service rigs through Plains in August, 2000, and a further 164 service rigs in October 2000, through CenAlta, the Corporation now owns the largest well servicing fleet in Canada.

The Corporation has a diverse workover rig fleet capable of performing service and completion jobs in any depth range, including heavy oil wells. It is also a leader in horizontal re-entry drilling. The characteristics of the fleet, which currently operates only in the WCSB, is illustrated in the following table:

Type of Service Rig	2003		2002		2001	
	# OF RIGS	% OF FLEET	# of Rigs	% of Fleet	# of Rigs	% of Fleet
Freestanding mobile single	75	31	50	21	23	9
Single	1	--	1	--	4	2
Mobile single	29	12	55	23	91	35
Double	57	24	58	24	60	23
Freestanding mobile double	6	3	6	2	5	2
Mobile double	46	19	45	19	48	19
Heavy double	7	3	7	3	9	4
Freestanding heavy double	2	1	2	1	--	--
Slant	16	7	16	7	16	6
Swab	--	--	--	--	1	--
TOTAL	239	100	240	100	257	100

During 2003, the PWS rig fleet generated 439,519 operating hours for a utilization rate of 50% based on 239 available rigs. The calculation assumes that available hours per year is 3,650 for each rig.

# of Rigs	# of Operating Hours	Rig Utilization %
-----------	----------------------	-------------------

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

2003	239	439,519	50
2002	240	392,210	45
2001	257	492,480	53

During 2003, PWS maintained an industry market share of 27% based on an average registered CAODC industry service rig fleet of 887 in western Canada. The PWS rig fleet has been rationalized over the past two years resulting in the retirement of 18 rigs that were no longer marketable due to equipment condition and/or capacity. The current fleet is also being upgraded through initiatives that include freestanding conversion, new five ton transporters and, new pump trucks, engines, doghouses and mud pumps. As at December 31, 2003 PWS had 83 freestanding service rigs representing 35% of its service rig fleet. This is an increase of 25 rigs and 11 percentage points over 2002. A freestanding rig is more efficient to set up, minimizes surface disturbance and, as there is no need for mooring, the possibility of striking underground pipelines is reduced.

Well service rigs are typically operated by a crew of four or five workers and include additional equipment such as circulating pumps, tanks, blowout preventers and tools. These rigs are mobile and can be moved to new locations quickly and with relative ease. In general, well servicing activities are conducted during daylight hours. PWS

typically charges its customers an hourly rate for its services based on a number of considerations including market demand in the region in which the service rig operates, the type of rig and equipment being used, and the amount of additional services or equipment required. Seven of PWS's well service rigs are specifically configured for re-entry drilling and have 24-hour operational capabilities. Service rigs are typically used during the completion phase of a well, instead of larger, more expensive drilling rigs, to reduce the cost of completing the well. The demand for well completion services is directly related to the level of drilling activity in a region, whereas the demand for other well servicing activities is based upon the total number of active wells, their age and their production characteristics otherwise referred to as "workover" service. Consequently, demand for completion services is generally less stable than demand for workover well servicing activities. Completion services account for approximately 33% of PWS's well servicing activity in 2003.

Completion services prepare a newly drilled well for production. Completion services may involve cleaning out the well bore, and the installation of production tubing, downhole equipment and wellheads. Service rigs work jointly with other services to perforate the well bore to open the producing zones and in stimulating the producing zones to improve productivity. The well completion process may take one day to many weeks to complete and PWS provides a service rig to assist during most or all of this process.

Well workover services are generally provided when a well needs major repairs or modifications and often involve operations similar to those conducted during the initial completion of a well. Workovers may also involve restoring or enhancing production in an existing producing zone, changing to a new producing zone, converting the well for use as an injection well during enhanced recovery operations or plugging and abandoning the well. Workover services also include major subsurface repairs such as casing repair or replacement, recovery of tubing and removal of foreign objects, such as lost tools, in the well bore. Workover activities may require a few days to several weeks to complete and additional equipment and services are provided by PWS or PDTSG during this process.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Well maintenance services are often required to ensure continuous and efficient operation of producing wells. These services include routine mechanical repairs such as repairing broken pumping equipment in an oil well or replacing damaged production tubing. Maintenance services are generally required throughout the life of a producing well and are typically required more often by oil wells than gas wells. Well maintenance activities may require a few hours to several days to complete. While workover and maintenance activities are not directly linked to drilling activities, they are influenced by both the short term and long term outlooks for oil and gas prices and reservoir depletion. Furthermore, an increase in drilling activity leads to more producing wells that require workover and maintenance services in future years.

Live, also a division of PLP, currently markets 25 portable hydraulic rig assist snubbing units in western Canada. The Live fleet grew by two units on December 30, 2003 through an asset acquisition from a private company based in southern Alberta. Rig assist snubbing units are equipped with specialized pressure control devices, which allows for completions and workover operations while the well is under pressure. The snubbing unit provided by Live is a hydraulic rig assist unit, which can be rigged up in less than two hours onto a service rig floor. Snubbing units are also part of the equipment used in controlled pressure drilling operations.

Traditional well servicing operations requires the pressure in a well to be neutralized, or killed, prior to performing such operations so that they can be conducted safely. Certain wells can be damaged if they are killed, as the fluids used in the process may cause the flow characteristics of the producing formation to be adversely affected. Consequently, snubbing units have been developed to perform certain workover, completion and controlled pressure drilling (CPD) activities without killing the well. The Corporation believes that the use of snubbing units is increasing as oil and gas companies become more aware of potential risks of formation damage that can be avoided by using snubbing units and techniques. Snubbing is typically performed on natural gas wells. Increasing natural gas well drilling and production in the Western Canada Sedimentary Basin is having a positive effect on demand for Live's services.

TECHNOLOGY SERVICES

The TS segment carries on business through three main business lines, being; wireline, directional drilling and separation services. Wireline includes cased hole, open hole and slickline services. Directional drilling includes MWD, LWD, directional drilling and rotary steerable services. Separation services includes well testing and controlled pressure drilling (which includes underbalanced drilling services). In addition to the three main business lines, TS manufactures, rents and sells PDC bits and derives revenues from the provision of project management services on the Burgos Project in Mexico.

Revenue generated by TS operations is as follows:

Years ended December 31, (In thousands)	2003		2002	
	REVENUE	% OF	Revenue	% of
Wireline	\$ 298,568	42%	\$ 227,497	38%
Directional Drilling	223,442	31%	178,675	29%
Separation Services	95,426	13%	100,670	17%
Other	96,949	14%	96,246	16%

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

\$	714,385	100%	\$	603,088	100%
----	---------	------	----	---------	------

WIRELINE

Wireline services are offered from numerous locations throughout the world. Wireline tools are primarily manufactured in Fort Worth, Texas. Once a hole is drilled, wireline logging services are used to measure the physical properties of underground formations to help determine the location and potential deliverability of oil and gas in a reservoir. The provision of Wireline Services is divided into three categories; open hole services, cased hole services and slickline services. Open hole logging assists in locating oil and gas by measuring certain characteristics of geological formations and providing permanent records called "logs". Cased hole services are performed at various times throughout the life of the well and include perforating, completion logging, production logging and well bore integrity services. Wireline services are provided from surface logging units, which lower tools and sensors into the well bore on a single or multiple conductor wireline. As the wireline pulls the tools through the well bore, log measurements are gathered and relayed through the wireline cable to a computerized surface data acquisition and processing system. These state-of-the-art systems are an integral component of each wireline unit.

Open hole logging is performed at different intervals during the well drilling process or immediately after a well is drilled. This logging data provides a valuable benchmark that future well procedures may be referenced to. The open hole sensors and tools are used to determine well lithology and the presence of hydrocarbons. Formation characteristics such as resistivity, density and porosity are accurately measured using electrical, nuclear, acoustic, magnetic and mechanical technologies. This data is then used to characterize the reservoir and describe it in terms of porosity, oil, gas, or water content and an estimation of productivity. This information can be further refined at a later time in one of the Corporation's log interpretation centers. Wireline services can relay this information on a real time basis via a secure satellite transmission network and secure internet connection to the client's office for faster evaluation and decisions. Most of TS's open hole tools and sensors are proprietary.

After the well bore is cased and cemented, the cased hole division can perform a number of different services. Perforating the casing allows oil and gas to flow to the surface. Production logging may be performed throughout the life of the well to measure temperature, fluid type, flow rate, pressure and other reservoir characteristics. This helps the operator analyze and monitor well performance and determine when a well may need a workover or further stimulation. In addition, cased hole services may involve well bore remediation, which could include the positioning, and installation of various plugs and packers to maintain production or repair well problems. Some of the cased hole tools are proprietary.

At its Fort Worth facility, which is ISO 9001 accredited, TS designs, assembles and services open hole and cased hole logging tools, and surface equipment. The specialized truck-mounted and skid-mounted wireline logging units are manufactured and assembled to the Corporation's specifications by third parties, primarily in Canada. The focus of wireline research and engineering has been on the development of new or improved downhole sensors which are currently being introduced for open hole logging that will take advantage of our new Wireline Communications System (WCS). In cased hole the Slim Monopole Array Sonic, Pulsed Neutron Decay Detector, Ultrasonic Cement Scanner, Production Fluid Identifier, and Casing Inspection Tool, are under research and/or development.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The AQRIT(TM) (Accurate Quick Reservoir Insitu Testing) technology is deployed within Canada on electric wireline and enables customers to gather key hydrocarbon reservoir information from both producing and non-producing well bores.

Slickline, which utilizes a solid steel, nonconductor line in place of a single or multiple conductor braided line used in electric logging, is used primarily in producing wells for running downhole memory tools, manipulating downhole production devices and fishing services.

TS provides wireline and slickline services with 39 open hole units, 175 cased hole units, 10 combination open hole/cased units, 14 slickline and six combination slickline/cased hole units deployed from its service centres in Canada, the U.S., Mexico, and internationally.

DIRECTIONAL DRILLING

Directional drilling is the use of equipment and engineering to intentionally change the angle of a well bore so that the trajectory of the well bore can be accurately controlled, drilling efficiency can be enhanced or formations or obstructions can be circumvented in order to reach the pay zone. Directional drilling services offered worldwide, was strengthened with the acquisitions of BecField Drilling Services Ltd. in January 2001, and the EM/MWD technology, from Geoservices Incorporated, in October 2000. Directional drilling equipment is engineered and assembled in Edmonton, Alberta and MWD/LWD tools are manufactured and assembled in Houston, Texas. TS also has research and engineering facilities in Forth Worth and Houston, Texas; Hannover, Germany; Cheltenham, England and Edmonton, Alberta, Canada.

TS supplies specialized equipment including MWD, LWD, rotary steerable systems and drilling motors along with experienced personnel for directional and horizontal drilling operations. Those services are available for directional control, slant well drilling, single and multi-lateral horizontal wells, and other directional applications.

An MWD system is connected behind the mud motor or rotary steerable system and relays continuous real time information to the surface to monitor the trajectory of the well being drilled. An LWD system is connected behind the mud motor or rotary steerable system and monitors formation characteristics while drilling, similar to the measurements mode with open hole logging tools. MWD and LWD information is transmitted to the surface via mud pulses or by electromagnetic waves. Using MWD information the operator steers the drill bit to the prescribed target location. Unlike previous technologies, MWD and LWD do not require the drill string to be tripped out of the hole while the well trajectory and formation characteristics are being measured, thus saving valuable time.

New products were the rationale behind the formation of Advantage R & D, Inc., (Advantage) in 1999. Advantage focuses on the research and engineering of MWD and LWD technologies and advanced directional drilling systems. The Advantage research and engineering strategy has initially been directed towards the high temperature MWD and LWD market with respect to land-based as well as deep-water drilling markets. Advantage has developed directional, gamma ray, resistivity, neutron porosity, bulk density, pressure while drilling and downhole environment severity sensors. Advantage is located in Houston, Texas, in a research and development facility that has state of the art testing equipment complete with extensive well simulation capabilities.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The directional drilling facility in Edmonton is responsible for the design and assembly of mud pulse MWD systems and certain directional survey tools which are manufactured to company specifications by third parties in Canada. This Edmonton facility is also responsible for the design of drilling motors which are manufactured by third parties in Canada to company specifications and assembled at its Fort Worth facilities. These MWD, survey and drilling motors are either used by the company or may be sold worldwide.

SEPARATION SERVICES

Northland, a division of PDTSG (Northland) provides separation services, well testing and controlled pressure drilling (CPD) services to oil and gas producers.

The separation business supplies personnel and equipment on a well site to recover a mixture of solids, liquids and gases from oil and gas wells. These recoveries include oil and gas as well as drilling and workover fluids and well stimulation by-products. Northland equipment is used to safely separate the recovered solids, liquids and gases while accurately measuring each component and ensuring proper well control. These services are used during drilling operations for "kick control", for well cleanup services after the stimulation of the well and for well testing operations. The operator requires these services to properly clean up the well prior to undertaking a flow test to determine the deliverability potential of the well. Northland is the largest provider of such services in Canada. With the acquisition of Plains Energy Services Ltd., in 2000, Northland Energy Corporation acquired the Entest Corp. personnel and equipment to expand its well testing and CPD operation into low and medium pressure market segments in Canada. The acquisition of Norward Energy Services in 2001 increased the capabilities of Northland to provide high-pressure and sour separation services to Canada as well as gaining a testing operation in the northwest U.S. In 2001, Northland acquired the assets of ITS-Testco LLC and an affiliate of that company to establish a separation services base in Mexico as part of the Burgos region contract and also acquired the separation assets of Core Laboratories de Venezuela SA. and its affiliates to establish a separation services base in eastern Venezuela.

An extension to the conventional separation services provided by Northland is the provision of mobile incineration systems. In applications where the operator is required to further restrict gas flaring, the use of portable incineration systems may, in certain circumstances, ensure a 99.95% efficiency in the destruction of the waste gases. Although incinerators have been used for decades to destroy waste gases of various compositions, this equipment was limited to permanent installation applications.

Northland also provides personnel and surface control equipment for CPD from offices in Canada, U.S., Mexico, South America, Europe/Africa, the Middle East and Asia/Pacific. It offers a complete service of engineering, data acquisition, equipment and personnel to drill a CPD well.

The concept of CPD is to use a lighter drilling medium than that normally used to ensure pressure in the well bore is lowered to reduce drilling related challenges and formation damage and allow formation characterization during drilling operations. Often, inert gas such as nitrogen or exhaust gas is injected downhole with the drilling mud to create the required lighter drilling medium. Reservoir fluids can be allowed to flow to the surface as the well is being drilled instead of exposing the reservoir to drilling mud invasion due to the overpressure nature of a mud column in the well bore. This concept is used in an attempt to avoid formation damage experienced in many wells, particularly horizontal wells, which are more susceptible to formation damage problems caused

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

by the drilling mud itself. With the increase in the number of horizontal wells being drilled and the increase of sub-hydrostatic reservoirs where drilling challenges, such as lost circulation and differential sticking are often encountered, the use of CPD technology has been increasing.

Northland developed its first separation package for CPD in the early 1990s. In the late 1990s, Precision acquired Northland and various other companies which provided Northland with rotating blowout preventers (RBOP(TM)), proprietary exhaust gas processors (EGP) and nitrogen membrane systems. The RBOP(TM) device seals off the well bore at surface by gripping and sealing around the drill pipe and rotating freely with it, thus diverting the pressurized flow of drilling fluids, gas, oil and cuttings to the choke manifold and separation package. The proprietary EGP satisfied the service gas requirements of CPD and the acquisition of the nitrogen membrane systems compliments the EGP technology and increases Northland's total CPD service gas capabilities. In addition, during the last two years, Northland has developed a new patented 5,000 PSI RBOP(TM) and a next generation patented EGP unit.

OTHER

United Diamond Ltd. designs, manufactures, sells and rents PDC drill bits. Its design and manufacturing facility is located in Nisku, Alberta. United Diamond is currently selling and renting its drill bits into the Canadian market and selected international markets.

United Diamond has developed the torsional impact motor (TorkBuster(TM)) to increase the drilling performance of PDC bits.

RENTAL AND PRODUCTION

Years ended December 31, (In thousands)	2003	2002	2001
Rental Services	\$ 36,478	\$ 24,469	\$ 42,200
Production Services	174,246	168,371	152,200
Total	\$ 210,724	\$ 192,840	\$ 194,400

The rental services component of the Rental and Production segment of the Corporation is carried out through Precision Rentals Ltd. (formerly Montero Oilfield Services Ltd), which provides a wide array of rental products and services, including surface, drilling, completion and production equipment; tubular and well control equipment and field and well site accommodations. The production services component of this segment is carried out through CEDA, which is a leading provider of industrial maintenance and turnaround services, including specialized catalyst handling, both in Canada and the U.S.

RENTAL SERVICES

The businesses of Smoky Oilfield Rentals, Big D Rentals and Ducharme Oilfield Rentals were combined and now operate as Precision Rentals Ltd. ("Precision Rentals"). Precision Rentals maintains an inventory of rental equipment including storage tanks, high and low pressure oil and gas separators, sump and shale tanks and related equipment. Precision Rentals also supplies the patented Vapour Tight Oil Battery(TM), which allows for safe, single well production of oil with H2S content through the use of a 500-barrel vessel with gas metering and flaring capabilities.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The field and well site accommodation portion of Precision Rentals consists of a fleet of approximately 281 fully equipped and furnished units. Trailer units are delivered to rig locations using Precision Rental's own air-ride trucks and tri-axle trailers.

The tubular and well control business of Precision Rentals consists of the rental of specialized drilling equipment (approximately 10,000 joints of specialty drill pipe and collars and 4,000 handling tools, valves, kellys and floats) to hydrocarbon producers and service and drilling rig contractors engaged in the Canadian oil and gas industry. The present inventory consists of various sizes and grades of oilfield tubulars, blowout prevention equipment, valves, pumps and diverter systems.

PRODUCTION SERVICES

CEDA is a leading provider of industrial maintenance and turnaround services and other specialized services to various production industries in Canada and the U.S. The main areas of its operations are industrial cleaning, catalyst handling and mechanical services, usually carried out in large plants such as refineries, gas plants, petro-chemical facilities and the pulp and paper industry. Industrial cleaning encompasses high pressure water blasting, large scale industrial vacuuming (169 vacuum trucks) and specialized chemical cleaning. High pressure water blasting equipment (79 units and 14 bundle blasters) pumps water at pressures up to 40,000 PSI to clean equipment and systems that are externally accessible. When equipment and systems are not externally accessible, cleaning requires the circulation of chemical formulations through a closed system. Specialized chemical cleaning utilizes a team of chemists, engineers and service technicians who combine their expertise to provide highly specialized and environmentally sound chemical cleaning services. Catalyst handling involves the removal and replacement of catalyst in reactors at refineries or petrochemical facilities. Mechanical services include bolt tensioning, machining and leak repair services. Specialized mechanical services utilize technology and equipment to unfasten, repair and refasten flanges and piping systems with resulting savings of time and money and reduction of fugitive emissions. These services are usually undertaken at customer locations, frequently under critical time constraints, during scheduled shut downs or emergencies.

With many years of experience in providing dredging, dewatering and water recycling services, CEDA operates a modern fleet of equipment that includes portable dredges, dewatering centrifuges and unique oil-skimming equipment capable of assisting companies in dealing with a variety of water-related maintenance services. The equipment and staff work in a variety of industries from chemical plants and refineries to mining, utilities and pulp and paper operations.

In Canada, CEDA and its subsidiaries operate from 18 operating centers plus a network of five dealerships. In the U.S., CEDA provides a full suite of services out of 10 major operating centers.

EMPLOYEES

The total number of employees fluctuates with rig utilization in contract drilling services and well servicing and with seasonal variations in certain of the Corporation's other businesses but is expected to range between 8,000 and 12,000 employees, consisting of between 4,000 and 6,000 employees in the Contract Drilling segment, 3,000 and 4,000 employees in the Technology Services segment and 1,000 and 2,000 employees in the Rental and Production segment.

LEGAL PROCEEDINGS

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The Corporation is not involved in any legal proceedings that it believes might have a material adverse effect on its business or results of operations.

SELECTED CONSOLIDATED FINANCIAL INFORMATION

SUMMARY OF OPERATING RESULTS

The following table sets forth selected financial information of the Corporation for each of the years ended, as indicated:

Years ended December 31, (millions of CDN \$ except per share amounts)	2003	2002	2001
Revenue	1,917.9	1,567.5	1,8
Earnings from continuing operations before goodwill amortization	191.1	89.5	2
Earnings from continuing operations before goodwill amortization per share:			
Basic (2)	3.51	1.67	
Diluted	3.46	1.63	
Earnings from continuing operations	191.1	89.5	1
Earnings from continuing operations per share:			
Basic (2)	3.51	1.67	
Diluted	3.46	1.63	
Net earnings (3)	188.7	91.3	1
Net earnings per share:			
Basic (2)	3.47	1.70	
Diluted	3.41	1.66	
Cash flow from operations (4)	258.4	199.2	4
Total assets	2,908.4	2,760.0	2,6
Long-term debt (5)	399.4	514.9	4

NOTES:

- (1) THE DATA SET OUT FOR THE YEARS ENDED DECEMBER 31, 2002 AND 2001 IS COMPARATIVE IN ALL MATERIAL RESPECTS.
- (2) BASIC PER SHARE AMOUNTS WERE CALCULATED USING THE WEIGHTED AVERAGE NUMBER OF COMMON SHARES OUTSTANDING.
- (3) THE YEAR ENDED DECEMBER 31, 2003 INCLUDES GAINS ON DISPOSAL OF INVESTMENTS AND A WRITEDOWN AND GAIN ON DISPOSAL OF ASSETS HELD AS DISCONTINUED OPERATIONS. THE YEARS ENDED DECEMBER 31, 2002 AND 2001 INCLUDED A GAIN ON DISPOSAL OF INVESTMENTS.
- (4) CASH FLOW FROM OPERATIONS INCLUDES DISCONTINUED OPERATIONS.
- (5) EXCLUDING CURRENT PORTION OF LONG-TERM DEBT.

DIVIDENDS

No dividends have been paid on any Common Shares of the Corporation since the purchase of the assets of Precision Drilling Limited in 1987. Any decision to pay dividends on the Common Shares in the future will be made by the Board of Directors of the Corporation and will be based on the Corporation's earnings, financial requirements and other conditions at the time.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Management's Discussion and Analysis relating to the consolidated financial statements for the fiscal year ended December 31, 2003 forms part of the Corporation's 2003 Annual Report and is incorporated herein by reference and forms an integral part of this Renewal Annual Information Form. The Management's Discussion and Analysis appears on pages 43 to 75 of the 2003 Annual Report.

MARKET FOR SECURITIES

The Common Shares of the Corporation are listed for trading on the Toronto Stock Exchange (TSX) and trade under the symbol PD (and effective February 2, 2004 PD.U); and on the New York Stock Exchange (NYSE) under the symbol PDS. The share trading summaries for both the TSX and NYSE for the past three years is located on page 101 of the 2003 Annual Report.

DIRECTORS AND OFFICERS

The following table sets forth all of the current directors and officers of the Corporation together with the positions currently held by them with the Corporation, their principal occupation or employment during the last five years and the year in which they were first elected a director of the Corporation. The term of office of each director will expire at the end of the next annual meeting of shareholders of the Corporation.

NAME	TITLE	PRINCIPAL OCCUPATION
W.C. (Mickey) Dunn Edmonton, Alberta	Director	Chairman, True Energy Ltd.
Robert J.S. Gibson Calgary, Alberta	Director	President, Stuart & Company Limited
Murray K. Mullen Calgary, Alberta	Director	Chairman, President and Chief Executive Officer of Mullen Transportation Inc.
Patrick M. Murray Dallas, Texas	Director	President and Chief Executive Officer Dresser, Inc.
Fred W. Pheasey Edmonton, Alberta	Director	Executive Vice President National Oilwell, Inc.
Robert L. Phillips Vancouver, British Columbia	Nominee Director	President and CEO, BCR Group of Companies since March 2001. Prior to that, from March 1999 to M Mr. Phillips was Executive Vice President at MacMilla Limited; prior to that, from March 1998 to March 1999 was President and CEO of PTI Group Inc.; prior to tha 1994 to March 1998

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Mr. Phillips was President and CEO of Dresco Energy Services Ltd.

Hank B. Swartout Calgary, Alberta	Chairman of the Board President and Chief Executive Officer	Officer of the Corporation
H. Garth Wiggins Calgary, Alberta	Director	Principal, Kenway Mack Slusarchuk Stewart, Chartered Accountants
Jan M. Campbell Calgary, Alberta	Corporate Secretary	Officer of the Corporation
R.T. (Bob) German Calgary, Alberta	Vice President and Chief Accounting Officer	Officer of the Corporation N/A
John R. King Calgary, Alberta	Senior Vice President Technology Services	Officer of the Corporation since March 2003. Prior to joining Precision, Mr. King was a Founder and Managing Director of RedTree Capital Corporation since February 1998.
M.J. (Mick) McNulty Calgary, Alberta	Senior Vice President Operations Finance	Officer of the Corporation N/A
Dale E. Tremblay Airdrie, Alberta	Senior Vice President Finance and Chief Financial Officer	Officer of the Corporation

As of the date hereof, the directors and officers of the Corporation, as a group, beneficially owned, directly or indirectly, or exercise control or direction over 529,623 Common Shares, which represents 0.95% of the issued and outstanding common shares. The information as to shares beneficially owned has been furnished by the respective directors and officers of the Corporation individually.

The Corporation is required to have an Audit Committee. The directors who are currently members of that Committee are Robert J.S. Gibson, Patrick M. Murray and H. Garth Wiggins. In addition, the Corporation has a Compensation Committee whose members are W.C. (Mickey) Dunn and Murray K. Mullen, and a Corporate Governance and Nominating Committee whose members are Robert J.S. Gibson, W.C. (Mickey) Dunn and Fred W. Pheasey.

ADDITIONAL INFORMATION

EVALUATION OF DISCLOSURE CONTROLS AND PROCEDURES

As of the end of Precision's fiscal year ended December 31, 2003, an evaluation of the effectiveness of Precision's "disclosure controls and procedures" (as such term is defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended (the "Exchange Act")) was carried out by the Precision's principal executive officer and principal financial officer. Based upon that evaluation, the principal executive officer and principal financial officer have concluded that as of the end of that fiscal year, Precision's disclosure controls and procedures are effective to ensure that information required to be disclosed by Precision in reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

During the fiscal year ended December 31, 2003, there were no changes in Precision's internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, Precision's internal control over financial reporting.

It should be noted that while Precision's principal executive officer and principal financial officer believe that Precision's disclosure controls and procedures provide a reasonable level of assurance that they are effective, they do not expect that Precision's disclosure controls and procedures or internal control over financial reporting will prevent all errors and fraud. A control system, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

REQUEST FOR ADDITIONAL INFORMATION

Additional information, including information as to directors and officers remuneration and indebtedness, principal holders of the Corporation's securities, options to purchase securities and interests of insiders in material transactions is contained in the Management Information Circular of the Corporation provided for the Annual and Special Meeting of shareholders of the Corporation to be held on May 11, 2004. Additional financial information is

provided in the Corporation's Financial Statements for the year ended December 31, 2003, which are contained in the Annual Report of the Corporation for the year ended December 31, 2003.

Upon request the Corporation will provide to any person:

1. one copy of this Renewal Annual Information Form;
2. one copy of the Corporation's audited financial statement for year ended December 31, 2003, together with the report of the auditors thereon contained in the Annual Report, and one copy of any of the Corporation's interim financial statements subsequent to such audited financial statements;
3. one copy of the Corporation's Management Information Circular provided for the Annual and Special Meeting of the shareholders of the Corporation to be held on May 11, 2004; and
4. when the Corporation's securities are in the course of a distribution pursuant to a short form prospectus or when a preliminary short form prospectus has been filed in respect of a distribution of the Corporation's securities, also upon request to the Corporate Secretary, one copy of any other document that is incorporated by reference in the preliminary short form prospectus or short form prospectus.

Copies of these documents may be obtained upon request to the Corporate Secretary, Precision Drilling Corporation, 4200, 150 - 6th Avenue S.W., Calgary, Alberta, T2P 3Y7, Telephone (403) 716-4500 or Facsimile (403) 264-0251.

MANAGEMENT'S DISCUSSION AND ANALYSIS

The Management's Discussion and Analysis has been prepared taking into consideration information available to February 10, 2004. The discussion focuses on key statistics from the Consolidated Financial Statements, and pertains to known risks and uncertainties relating to the oilfield and industrial service sectors. This discussion should not be considered all-inclusive, as it excludes changes that may occur in general economic, political and environmental conditions. Additionally, other elements may or may not occur which could affect the Corporation in the future. In order to obtain the best overall perspective, this discussion should be read in conjunction with the material contained in other parts of this annual report, including the audited Consolidated Financial Statements. The effects on the Consolidated Financial Statements arising from differences in generally accepted accounting principles (GAAP) between Canada and the United States are described in Note 15 to the Consolidated Financial Statements.

HIGHLIGHTS (1)

(STATED IN THOUSANDS OF CANADIAN DOLLARS, EXCEPT PER SHARE AMOUNTS, WHICH ARE PRESENTED ON A DILUTED BASIS)

Years ended December 31,	2003	Increase (DECREASE)	2002	Increase (Decrease)
Revenue	1,917,933	350,427	1,567,506	(247,702)

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

- (1) QUARTERLY FINANCIAL INFORMATION FOR THE TWO-YEAR PERIOD ENDED DECEMBER 31, 2003 IS PRESENTED ON PAGE 104 OF THIS ANNUAL REPORT.
- (2) OPERATING EARNINGS IS NOT A RECOGNIZED MEASURE UNDER CANADIAN GENERALLY ACCEPTED ACCOUNTING PRINCIPLES (GAAP). MANAGEMENT BELIEVES THAT IN ADDITION TO NET EARNINGS, OPERATING EARNINGS IS A USEFUL SUPPLEMENTAL MEASURE AS IT PROVIDES AN INDICATION OF THE RESULTS GENERATED BY THE CORPORATION'S PRINCIPAL BUSINESS ACTIVITIES PRIOR TO CONSIDERATION OF HOW THOSE ACTIVITIES ARE FINANCED OR HOW THE RESULTS ARE TAXED IN VARIOUS JURISDICTIONS. INVESTORS SHOULD BE CAUTIONED, HOWEVER, THAT OPERATING EARNINGS SHOULD NOT BE CONSTRUED AS AN ALTERNATIVE TO NET EARNINGS DETERMINED IN ACCORDANCE WITH GAAP AS AN INDICATOR OF PRECISION'S PERFORMANCE. PRECISION'S METHOD OF CALCULATING OPERATING EARNINGS MAY DIFFER FROM OTHER COMPANIES AND, ACCORDINGLY, OPERATING EARNINGS MAY NOT BE COMPARABLE TO MEASURES USED BY OTHER COMPANIES.

Interest coverage (2)	8.5	4.4	8.4

- (1) EXCLUDING CURRENT PORTION OF LONG-TERM DEBT WHICH IS INCLUDED IN WORKING CAPITAL.
- (2) OPERATING EARNINGS DIVIDED BY NET INTEREST EXPENSE.

The 107% increase in net earnings in 2003 over 2002 was driven largely by the strong Canadian market where drilling activity increased by 30% year over year. Technology Services (TS) return to profitability was also a contributor to the improvement. While not as significant quantitatively, this milestone provides a measure of success for management's efforts to re-focus that business from top line growth to bottom line profitability.

Interim objectives in the Corporation's five year plan to develop the Technology Services segment have been achieved, the most significant of which relate to technological advancements. Our new logging-while-drilling (LWD), measurement-while-drilling (MWD) and rotary steerable tools have set new standards for operating in high temperature and high pressure environments and have demonstrated superior information gathering and steering response capabilities. The tools are now being put to work by our customers and revenues should increase as the number of systems deployed to operations increases and as we fill out our fleet with the full complement of tool sizes.

Our research and engineering programs were successful at mitigating the technology risk associated with the TS development plan. However, it was recognized that insufficient attention had been paid to managing factors that put achievement of profitability objectives at risk. As is often the case,

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

achievement of one set of objectives requires different skills than achieving another set of objectives. As a result, changes were made at various levels of the TS management team to add the experience required to focus on delivering a consistent product to our customers in a systematic and profitable manner.

Change was not isolated to the Technology Services segment. Early in the year, the Corporation sold its gas compression business, which was carried on by Energy Industries Inc. Although Energy Industries had been profitable since its acquisition by Precision in 1996, the compression packaging business was determined to be not core to the Corporation's energy services globalization strategy. In September the Corporation's rental businesses were brought under one umbrella to form Precision Rentals Ltd. This served to simplify purchasing decisions for our customers by providing one point of contact for all their rental needs.

ECONOMIC DRIVERS OF THE OILFIELD SERVICES BUSINESS

Crude oil and natural gas (hydrocarbons) are the primary sources of energy in the world. The provision of these commodities to the consuming public involves a number of players, each of whom take on different risks in the process of exploring for, producing, refining and distributing hydrocarbons and

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

its associated refined by-products. Exploration and production companies assume the risk of finding hydrocarbons in pools of sufficient size to economically develop and produce the reserves. The economics of exploration and production is dictated by the current and expected future margin between the cost to find and develop hydrocarbons and the price at which those products can be sold. The wider the margin, the more incentive there is to undertake the activities involved in the process of finding, producing, refining and distributing energy to residential and business users.

The worldwide oilfield services industry (broadly defined) is a 100 billion business that provides a wide array of services and equipment to support oil and gas exploration and production activities.

[GRAPHIC OMITTED - PIE CHART]

[SOURCES OF ENERGY USED WORLDWIDE]

Crude Oil	39%
Natural Gas	23%
Coal	23%
Hydroelectric Power	7%
Nuclear Electric Power	7%
Geothermal, Solar, Wind and Wood and Waste Electric Power	1%

These activities include acquiring access to prospective lands, shooting seismic to detect the presence of hydrocarbons, drilling wells and measuring the characteristics of subsurface geological formations. If a well is evaluated to be commercially viable, additional oilfield services are required to complete the new well and then subsequently to maintain production. Exploration and production companies hire oilfield service companies to perform the majority of these services, hence, they are Precision's customers. The revenue for an oilfield service company is therefore, our customer's finding and development cost.

Providing these services incorporates three main elements: people, technology and equipment. Attracting, training and retaining qualified employees is the single biggest challenge for a service company. Exploration and production activities are taking place in ever changing surface and subsurface conditions. Developing technology and building equipment that can withstand increasing physical challenges and operate more efficiently is key to maintaining and improving the economics of crude oil and natural gas production. The primary economic risks assumed by oilfield service companies are the volatility of activity levels, that translate into utilization rates for its investment in people, technology and equipment, and cost control to maximize the margins it earns.

The economics of a service company is thus largely driven by the current and expected price of crude oil and natural gas, which is determined by the supply and demand for the commodity. Since crude oil can be transported relatively easily, it is priced in a worldwide market which is influenced by a wide array of economic and political factors. Natural gas is priced in more local markets due to the requirement to transport this gaseous product in pressurized pipelines.

4 Year Oil Avg	19.06	19.06	21.15	21.15	21.15	21.15	26.77	26.77	26.77

Although, as illustrated above, crude oil and natural gas prices have historically been quite volatile, the consensus of industry observers is that the relatively high current price environment appears to be sustainable for the foreseeable future. Oil prices, which during 2003 averaged US\$31.10 per barrel for West Texas Intermediate (WTI), are the result of political instability in some OPEC member nations (Venezuela, Iraq and Nigeria) and from a generally improving world economy with energy demand growth particularly strong in China and Southeast Asia. Another important factor in the crude oil pricing equation, and one that has seen a fundamental change from past pricing scenarios, is the value of the U.S. dollar. Since oil prices are denominated in U.S. dollars around the world, the devaluation of the U.S. dollar that has occurred over the past year has implications for both the seller and buyer of the commodity. Oil producing nations, with OPEC members taking the lead in controlling supplies and prices, are motivated to see an increase in the U.S. dollar price of oil to maintain their purchasing power in other currencies such as the Euro. From a buyer's perspective, the devaluation of the U.S. dollar has made oil a cheaper commodity for those who spend Euros and Japanese Yen thus supporting the increased demand.

North American natural gas prices are also being supported by strong fundamentals. Demand is increasing with improved economic growth while supply from relatively mature producing basins is starting to decline. The near record gas drilling activity in 2003 served only to slow the decline in the production rate and this situation is not expected to change in the near future. High oil prices also serve to support natural gas prices as the

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

economic benefit of switching between the two fuels is minimal. The importation of liquefied natural gas into the North American market, once thought to be the competitive product that would cause gas prices to decline, is now viewed by many industry analysts as a requirement to fill the gap between demand and conventional production capabilities.

THE CANADIAN MARKET - PRECISION'S PLATFORM

The Western Canada Sedimentary Basin (WCSB) is maturing and our Canadian business units are adapting to this change. Overall production in the WCSB is growing, however, conventional oil is on the decline and natural gas reserve growth is struggling to replace 2003 production volumes. Growth opportunities exist in oil sands, heavy oil and tight gas drilling, coal bed methane drilling in particular. Longer-term medium to deep drilling prospects will be long awaited opportunity for oilfield service providers. With strong commodity prices, our customers first exploit low risk quick tie-in production. For western Canada this is shallow natural gas and the statistics prove this out. The number of wells drilled in 2003 set an all-time high with 19,851 completed wells. Note that well statistics on a completion basis differ from rig releases due to delays in reporting. While the statistics vary, well completion statistics accurately profile work opportunity over longer periods of time.

The following chart profiles the type of wells drilled in Canada over the past 10 years.

[GRAPHIC OMITTED - BAR CHART]
[WESTERN CANADA SEDIMENTARY BASIN]
[NUMBER OF INDUSTRY WELLS DRILLED ON A COMPLETION BASIS]

	Oil ---	Gas ---	Dry ---	Service -----
1994	3853	5370	2503	145
1995	4843	3618	2414	187
1996	6332	3726	2459	178
1997	8558	4857	2777	292
1998	3142	4585	1850	167
1999	2730	6309	1427	139
2000	5462	8934	1903	186
2001	4689	11177	1759	308
2002	3832	9073	1289	265
2003	4473	13944	1233	201

The steady growth in natural gas drilling has fueled activity for the past decade. The shift from oil to natural gas wells impacts the underlying nature of the energy services that companies like Precision provide. It has created higher demand for snubbing and in general, lower demand for service rigs, as natural gas wells do not need to be worked over as frequently as oil wells.

The following chart profiles 10-year drilling rig activity trends as measured by spud to rig release operating days by category of drilling rig depth rating.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

2001	22529	30300	23301	23320	9719	6988	4288
2002	18894	21877	17327	17299	8004	4228	4358
2003	27543	31431	21842	22002	13987	5188	4505

While the year 2003 set the WCSB well count record, it is 1997 that continues to hold the high mark for drilling rig work in terms of utilization and operating days. At 33% of industry drilling rigs, Precision's activity tracks very close to industry. While the well count is important, the reduction in time to drill a well deserves emphasis.

It is the development of shallow well oil and natural gas prospects that underpins the Canadian market and continues to be the agent for activity volatility. The trend towards deeper drilling prospects is progressing at a slow pace. However as our customers drill out the shallow well inventories that they hold today, they will be forced to pursue deeper prospects. We believe that we are beginning to see this shift as demand for medium depth light triple type drilling rigs has never been stronger than it is in the first quarter of 2004.

The following chart profiles the 10-year trend in terms of average well depth and average operating days to drill a well.

[GRAPHIC OMITTED - LINE CHART]
 [WESTERN CANADA SEDIMENTARY BASIN]
 AVERAGE INDUSTRY WELL DEPTH VERSUS TIME TO DRILL

	Days		Depth
1994	8.21	1994	1152
1995	7.8	1995	1162
1996	7.67	1996	1107
1997	7.77	1997	1108
1998	9.17	1998	1240
1999	7.71	1999	1078
2000	7.12	2000	1068
2001	6.72	2001	1062
2002	6.36	2002	1067
2003	6.37	2003	1032

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

On average, oil and gas well depths are increasingly shallow. This is entirely consistent with the production shift to natural gas in the WCSB. Experience shows that our customers, the producers, first develop low risk close to market prospects such as those in southern Alberta. The average time to drill a well in the WCSB in 2003 was just over six days. For Precision in Canada, the average time is 5.1 days. The average drilling time per well has shown considerable reduction since 1999 as drilling contractors continue to search for niche equipment solutions to specific well parameters. Precision's coil tubing drilling rigs, since their emergence in the year 2000, have had a significant impact on industry drilling statistics and in some ways have diminished the meaning of a well count in terms of drilling rig activity.

Improvements in drilling equipment and processes in combination with better downhole tools like MWD, LWD and the drill bit have provided productivity gains that lower customer costs. Precision's coil tubing drilling rigs is a case in point. Available rigs averaged 10.5 in 2003 and all together they drilled 2,641 wells during the year. Each well averaged a well depth of 614 metres, took 16.8 hours to drill with an operating utilization of 48%, move time excluded. These types of drilling solutions are applicable to specific drilling programs only and have filled a customer need to better exploit shallow natural gas. Another example is oil sands drilling in northeast Alberta where Precision has taken a lead industry role in the development of specialized equipment configuration with our Super Single(R) drilling rig to meet the drilling requirement for programs that enable recovery techniques such as Steam Assisted Gravity Drainage (SAGD).

Innovations such as these may reduce our drilling revenue days in the near term, however it balances out as we enable our customers to pursue more prospects in the exploitation of hydrocarbons within the WCSB.

The following chart profiles the 10-year trend in terms of available drilling rigs and operating day rig utilization.

[GRAPHIC OMITTED - LINE/BAR CHART]
 [WESTERN CANADA SEDIMENTARY BASIN]
 [INDUSTRY UTILIZATION VERSUS NUMBER OF DRILLING RIGS AVAILABLE]

Drilling Rigs Available at Year End		Rig Operating Day Utilization	
-----		-----	
1994	445	1994	62
1995	458	1995	51
1996	479	1996	58
1997	545	1997	69
1998	579	1998	43
1999	588	1999	39
2000	615	2000	54
2001	652	2001	52
2002	662	2002	38
2003	681	2003	52

The supply of drilling rigs in Canada has steadily increased over the past 10 years to almost 700, an all-time high. Customer demand as measured by

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

operating day utilization peaked in 1997 and has languished between 38% and 56% since. This has not deterred the industry from adding rigs as drilling contractors have continued to build capacity. In the short term the capacity is geared toward peak winter demand in January and February. In the medium to long-term it provides the capacity to drill more wells through better utilization in the other ten months of the year. If commodity prices weaken for a prolonged period the industry may have a large supply demand imbalance. Clearly the industry believes that the pace of drilling to sustain natural gas production for domestic Canadian use and export to the United States will keep equipment utilization in good stead.

Within the Contract Drilling segment, Precision underwent tremendous growth in Canada up to 1997. Subsequently we diversified our service offering through service rigs and snubbing units to service and work-over the increasing number of wells drilled and in production. This included camp and catering capabilities to meet the logistical reality of remote drilling locations and the need to reduce travel incidents for field employees at the well site. Precision's drilling rig fleet represented 40% of the industry in 1997. Our market share has eroded to 33% in 2003. Precision is comfortable at this level and we acknowledge that it would take the acquisition of 55 existing rigs to regain lost market share.

With a lead industry market share in Canada and reduced acquisition opportunities within Canada our focus has been to reach out and gain experience in the international drilling market. We have gained considerable work experience and projects like the Burgos Basin in Mexico demonstrate our ability to deploy and operate on a large scale in the global arena.

PRECISION'S DEVELOPMENT IN THE OILFIELD SERVICES BUSINESS

Precision's development is best described in the context of its three business segments which are distinguished by not only by the types of services provided but also by their position on the continuum from start-up to maturity. Contract Drilling includes drilling rigs, service rigs, hydraulic well assist snubbing units, procurement and distribution of oilfield supplies, camp and catering services, and manufacture, sale and repair of rig equipment. Technology Services includes wireline, directional drilling, MWD, LWD services, separation services, controlled pressure drilling, and the design, manufacture and marketing of polycrystalline diamond compact drill bits. Rental and Production includes oilfield equipment rental services and industrial process services.

The following graphs illustrate how each of the Contract Drilling, Technology Services and Rental and Production segments have historically contributed to Precision's profitability and investment.

CONTRACT DRILLING - CANADA IS THE CORE - WORLDWIDE DRILLING IS IN SIGHT

The Contract Drilling segment is the current financial foundation of the Corporation. Canadian business units within the segment are well established. Each core business unit has undergone asset growth and has a lead market role within Canada. Using the financial and operational leverage gained, the segment continues to evolve within Canada with a view to exporting its capabilities to niche markets worldwide.

Within Canada the segment has individual business units that are tightly integrated in terms of operational management, safety, engineering, accounting and senior management supervision and governance. Communication is a skill that has been refined and ingrained in the operating culture. The strength to successfully integrate acquisitions with vertical integration within and between related ancillary business units has been developed through the handling of acquisitions over the past 15 years.

Precision's roots began in Western Canada as a land drilling contractor and the Corporation's development has matched that of the WCSB. Initially founded in 1985 as Cypress Drilling Ltd., the business quickly grew from four drilling rigs to 19 with the reverse takeover in 1987 of Precision Drilling Ltd., a company formed in 1952. Over the following decade a series of nine acquisitions expanded the Canadian drilling rig fleet to 200 as of May 1997 and a 40% market share of industry rigs. International operations in Venezuela commenced in 1992 with the Sierra Drilling acquisition. Diversification into service rig and snubbing operations came with the 1996 acquisition of Enserv Corporation. In the second half of the year 2000, Precision became fully vested in the Canadian service rig business as the CenAlta Energy Services Inc. acquisition created a combined fleet of 257 service rigs and a lead industry market share of 28%. The additional acquisition in 2000 of coil tubing drilling rigs and other shallow drilling rigs rounds out key milestones in our asset base growth.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

While each business unit is at its own stage in the business life cycle continuum, drilling has matured over the past three years. Today the business has developed critical equipment mass and employee depth. It has developed integrity-based systems that enable the business to evolve in meeting fundamental industry challenges while delivering better profit and safety performance. Employee retention and seasonal cycles remain a huge manpower challenge for the industry. This condition is rather unique in that there is a reasonable supply of equipment; it is the people element that keeps the market in tight supply. The supply of experienced people yields profit leverage for oilfield service companies, not just the "iron".

As shallow natural gas drilling runs its course in Canada, our diverse and versatile fleet of drilling and service rigs are very well positioned for the eventual shift to deeper drilling prospects.

TECHNOLOGY SERVICES

The acquisition of Computalog Ltd. in 1999 marked the initial step in a five-year strategy to develop the Technology Services business. The market for downhole services was and still is dominated by three large multi-national oilfield service companies. However, oil and gas exploration and production companies are keen to see competition in the ranks of their service providers and a niche was available to a smaller participant that could deliver quality products and service. Precision's mature drilling operation provided the reputation of a respected service provider and the financial backing required to take on such a venture. In addition, the TS business provided the means to participate in the offshore oil and gas exploration and production market.

The objectives of TS are the same today as they were in 1999. They are to expand our product offering, globalize the presence of the whole Precision group outside of Canada, and introduce a step change in technological capabilities of what existed in TS and the industry. An advantage that TS had as a new "greenfield" participant in the market was that it was not burdened by the challenge of integrating new technology with old, nor need it be concerned with the impact new technology might have on the economics of a substantial investment in earlier generation technologies.

Initially, activities aimed at achieving TS objectives were undertaken across a broad front. Since 1999 Precision has spent \$133 million on its research and engineering efforts. Much of this work was centered around Advantage R&D, Inc. in Houston, Texas, which was established by Precision in 2000 with the mandate to develop the next generation of LWD and MWD tools. Another significant element of the research and engineering program focused on the development of our Rotary Steerable tools, which work was undertaken by Smart Stabilizer Systems Ltd., a Precision subsidiary based in Cheltenham, England.

Acquisitions, including Geoservices S.A in October 2000 and BecField Drilling Services Ltd. in January 2001, were completed to gain access to innovative technologies and to establish a presence in certain regional international markets. By early 2001, TS had established regional centers in seven strategic geographic areas around the world, namely Canada, the U.S., Mexico, Latin America, Europe/Africa, the Middle East and Asia/Pacific.

Technology Services revenue grew from \$126 million in 1999 to \$603 million in 2002. A significant amount of this expansion came outside of the Canadian and U.S. markets with the other regional operations accounting for 38% of revenue in

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

2002 compared to 14% in 1999. However, the scope of TS growth initiatives, in terms of both geography and product lines, combined with the impact of delays in the deployment of new technologies, resulted in operations support and administrative organizations that were uneconomic for the start-up revenue levels realized.

Fiscal 2003 can best be characterized as a "year of re-focus" for TS. A number of management changes occurred during the year which changed the style and culture of the TS segment. No longer is the segment purely focused on revenue growth and geographic expansion. The renewed goal is profitable growth in areas where we believe we can achieve an acceptable long-term return on our investment.

RENTAL AND PRODUCTION

Precision entered this segment of its business in 1996 when it acquired EnServ Corporation. Since then the Corporation has reduced the operations carried on by this segment through strategic divestitures that took advantage of attractive valuations to dispose of operations determined to be not core to Precision's future growth plans. The industrial rental division was sold in February 1999 and the gas compression operation was sold in March 2003. Each of these transactions produced gains for the Corporation. Both of the businesses currently carried on by the segment, namely, industrial plant maintenance and oilfield equipment rental, have grown through acquisitions and the pursuit of internal growth opportunities.

CEDA's plant maintenance operations have become increasingly focused on the expanding activity in northern Alberta's oilsands regions. The acquisition of JJay Exchanger Industries Ltd. in the second quarter of 2000 solidified the segment's position in this market as a provider of all the required services in a major refinery or petro-chemical plant turnaround/shutdown.

Innovation has also played an important role in CEDA's steady growth. Their research and development efforts have grown out of their unique knowledge and experience, with the focus on developing new tools and applications that are marketable in the field. Examples of products that CEDA has introduced to the market include the SuperLance(TM) System, which combined Precision's experience in coil tubing drilling with water blasting technology to increase the efficiency of cleaning coker units in refineries, and various adaptations of robotics technology to increase the safety and timeliness of tank cleaning operations.

The oilfield equipment rental business expanded its product offerings in 1997 with the acquisition of substantially all of the business assets of Ducharme Oilfield Rentals Ltd. whose primary product line was the rental of portable industrial housing, which is used at many remote drilling locations in western Canada. Since then many initiatives have been undertaken to integrate the delivery of products to customers and increase the profitability of operations. Among them is the closure of the wellsite trailer manufacturing facility in favour of less costly outsourcing arrangements in 2002 and more recently the consolidation of all rental product lines to form Precision Rentals Ltd. This latter move was in response to changing and growing customer needs to simplify their purchasing decisions by providing one point of contact to access all their rental needs.

RESULTS OF OPERATIONS

2003 COMPARED TO 2002

In financial terms, the Contract Drilling segment had a very good year in 2003 with a sharp rebound in Canadian drilling activity to 2001 levels, higher international rig activity with fourth quarter growth and a moderate increase in Canadian service rig activity. Snubbing and camps services were also more active with equipment utilization improvement similar to drilling. While international conditions were positive, seasonally adjusted Canadian performance strengthened throughout 2003. In 2002, the quarterly trend was quite the opposite where in Canada conditions were deteriorating after the torrid pace of 2001. For 2003, segment revenues increased by 29% to \$993 million, an improvement of \$223 million over the prior year. Operating earnings increased by 55% to \$286 million, an improvement of \$101 million and 4.8 percentage points of revenue for a margin improvement of 20%. Of the \$101 million improvement in operating earnings, 70% or \$70 million of this is attributable to Canadian drilling rig and service rig operations. This earnings improvement is attributable to more equipment activity and higher pricing. The equipment activity increase, volume factor, generated incremental operating earnings of \$50 million over prior year with higher pricing, price factor, generating \$20 million virtually all of which was generated in the second half of the year. Service rig performance is noteworthy, as the operating earnings margin improvement was almost half the total at \$9 million or \$21 per service rig operating hour.

International drilling operations experienced significant expansion in 2003 as operating earnings and operating days increased by 31% and 32%, respectively, over 2002. The increased activity is attributable to additional rigs working in Mexico and the commencement of operations in the Middle East and the Asia/Pacific region.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

In summary, current year performance is significantly ahead of 2002, and close to the record setting performance of fiscal 2001.

Coming off a relatively weak 2002, fiscal 2003 steadily gained strength as our customers stepped up field activity to increase production in an environment where commodity price strength became more entrenched. With firm global oil pricing and firm North American natural gas pricing, sustained demand for Canadian Contract Drilling services throughout the year has allowed for strong revenue rates as we exit the fourth quarter of 2003. In the Canadian market, this is in sharp contrast to 2002, where rates were being undermined to start the year and continued to erode during the year.

During 2003 Contract Drilling kept tight control on capital expenditures with a focus to strengthen the existing asset base, grow international drilling and be opportunistic to acquisitions within Canada. Capital expenditures, including business acquisitions, totaled \$106 million, representing an increase of \$55 million or 108% compared with 2002. The increase is primarily attributable to asset base growth as the level of expenditure to upgrade our existing asset base is a continual priority.

International drilling operations continued along a path of patient growth. The rig count increased by three to exit the year at 19, with 10 in Mexico, two in the Middle East, two in Asia/Pacific, and five in South America. There were four additions and net one rig disposal. Three new rigs were built in Canada with one deployed to Mexico, one to the Middle East and one platform rig to the Asia/Pacific region. The fourth rig is a retrofitted mechanical light triple deployed to Mexico from the Canadian fleet. A net one rig ownership interest in Argentina was disposed of during the year. The platform-mounted rig 703 is of particular interest as it is Precision's first offshore drilling rig. The rig was mobilized for Asia/Pacific late in the year and is not expected to start operations until the second quarter of 2004.

[GRAPHIC OMITTED - PIE CHART]
[GEOGRAPHIC DISTRIBUTION OF
CONTRACT DRILLING REVENUE (2003)]

Canada	Mexico	Rest of World
88	7	5

In Canada, our asset base expanded with the acquisition of two snubbing units, 19 oilfield camps and the construction of one new generation single drilling rig, a Super Single(R) Light with a 1,200 metre depth rating. A second such rig commenced drilling in February 2004. Asset reductions include the decommissioning of one drilling and one service rig, the sale of one surface hole drilling rig and one camp and the transformation of certain four unit camps into six unit configurations.

Canada spurred the improved financial performance on the strength of record shallow natural gas well drilling activity.

- o Canadian drilling rig activity increased 36% over prior year to 42,725 operating days and 52% utilization, an improvement of 11,362 days and 14 utilization percentage points.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

- o Service rig activity increased 12% over prior year to 439,519 operating hours and 50% utilization, an improvement of 47,309 hours and five utilization percentage points.
- o Snubbing unit activity increased 39% over prior year to 4,322 utilization days and 54% utilization, an improvement of 1,210 days and 12 utilization percentage points.
- o Camp activity increased 38% over prior year to 12,451 camp days and 39% utilization, an improvement of 3,406 days and 6 utilization percentage points.

International drilling rig activity increased 32% over prior year to 3,990 operating days, an improvement of 975 days. Two thirds of the additional days occurred in the Mexico operations where additional rigs were put to work with the extension of the Burgos integrated services project. Drilling operations ran for a full year in the Asia/Pacific region adding 280 days to the increase in 2003 while Middle East operations commenced in the fourth quarter of 2003.

Looking ahead to 2004 we carry strong momentum in all business lines within the segment.

- o Precision Drilling International's drilling operation is expected to benefit from a full year of 2003 growth in the Middle East and Asia/Pacific regions. We expect operations in Venezuela to carry forward at current levels.
- o Precision Drilling in Canada is off to an excellent first quarter start with drilling rig activity 4% ahead of 2003 and superior operating earning margins.
- o Precision Well Servicing in Canada is off to an even better first quarter start with service rig activity 8% ahead of 2003 and superior operating earnings margins.
- o Live Well Service and LRG Catering are also ahead of last year's pace as natural gas drilling and production activity is generating strong demand for snubbing and camp/catering services.

2002 COMPARED TO 2001

The asset base for Contract Drilling was virtually unchanged during 2002, as there were no additions and certain rigs, 4 drilling and 17 service, were taken out of service. The reasons for the decline in activity in 2002 compared to 2001 were two-fold. First, competition and industry capacity continued to increase, albeit at a slower pace, as competitors continued to build new equipment. Available rigs in Canada reached an all-time record high. Second, although the fourth best year ever in western Canada in terms of well completions, 2002 was characterized by low risk drilling whereby short duration shallow gas wells were dominant. A lack of confidence in energy commodity pricing triggered conservative spending by our customers. This was noteworthy as drilling parameters serve as a lead indicator for most future energy services within a region. There were 14,459 wells drilled in Canada in 2002, a mark that resulted in a drilling rig activity decline of 27% to 31,363 operating days for Precision in Canada representing a 38% utilization rate, a post-1992 low. Service rig activity declined 20% to 392,210 hours in Canada (44% utilization). Our service rig work was split one-third new well completion with the remaining two-thirds directed towards the workover of existing wells in production. Snubbing unit activity declined 15% and camp and catering days declined 37% to 9,041 days (33% utilization).

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Capital expenditures were managed to closely match changes in demand for our existing asset base. Measures of demand include utilization, revenue and operating earnings. Compared to the prior year service and drilling rig utilization declined a combined 24%, capital expenditures declined 59%, revenue decline of 23% and operating earnings declined 38%.

In terms of operating earnings, the \$114 million dollar decline over prior year was due to a volume reduction of \$71 million due to lower equipment utilization, with the remaining \$43 million due to price competitiveness resulting in lower rig dayrates and less coverage of fixed infrastructure costs. Drilling and service rig dayrates were strong in the first quarter of 2002 as record 2001 performance momentum carried forward through winter drilling. However, as the remaining three quarters progressed, steadily softening demand continued to erode operating margins and Contract Drilling exited the year with margins at 52 week lows.

2003 COMPARED TO 2002

As noted earlier, 2003 was a year of transition for Technology Services with new management changing the focus of the business from top line growth and geographic expansion to enhanced bottom line profitability. Return on capital employed is now the yardstick by which success is measured and investment decisions are guided. The transition is not complete, however, significant improvements were achieved in all regions and we will strive to make further progress in 2004.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Notable accomplishments in 2003 include the following:

- o Non-profitable product lines were shut down in many regions. This is consistent with another key element of the Technology Services strategy going forward. That being, not trying to be everything to everybody everywhere. The segment will focus on what it is good at in regions where economies of scale will contribute to profitable operations.
- o Other businesses were rationalized and re-focused. In some instances this involved consolidating management functions where geographically possible. In others it meant trimming cost structures to better match anticipated revenue levels and renegotiating customer contracts to recognize additional services being provided.
- o Non-core businesses were identified. The sale of one such business, Fleet Cementers, Inc., was completed in February 2004, and a similar transaction is being pursued with respect to Polar Completions.
- o TS was successful in signing a number of large contracts throughout the world on which the Corporation will use its new technologies.
- o A technology review was completed in the third quarter which provided the direction for our research and engineering work for the next few years. This review centered on a road map for a development plan that considers key customer needs and requirements, identifies the related project parameters, and set priorities.
- o The first phase of the segment's Enterprise Resource Planning information system implementation project was completed in the fourth quarter when the Canadian operations went live on the software. The new system and processes are already beginning to pay dividends in terms of expense analysis and additional information available to manage the business.

One critical factor that hampered the roll out of our new suite of tools in the first part of 2003 was the ability for the hostile environment logging (HEL(TM))/LWD tool to demonstrate that it could reliably perform in many different geological environments. The fourth quarter saw a step change in the reliability of these tools. The mean time between failure almost quadrupled in December and that success has continued in early 2004. This operating reliability allows our customers to also see the technological advantages of our tools which are demonstrating logging speeds well in excess of existing industry standards. The HEL(TM)/LWD tools now appear to be nearing the end of the process of evolving from a science project to a viable business. We began the project by designing and building tools to collect high quality geological and geophysical information. The next phase focused on collecting that information in a reliable and efficient manner, which is what we accomplished in the latter half of 2003. We are now starting to generate advanced interpretation products from that information and should be able to grow the business using our existing wireline infrastructure such as our computing and interpretation centers in Calgary and Houston.

With respect to our Rotary Steerable tool, although several runs have been completed with over 125 hours in the hole, we are having some reliability challenges of the same nature as we experienced with the HEL(TM)/LWD tools in early 2003. The tools have demonstrated superior capability to generate high build angles and to kick off directionally from a vertical wellbore, both of which add efficiencies to our customers' drilling operations.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

[GRAPHICS OMITTED - BAR CHARTS]
 [GEOGRAPHICAL DISTRIBUTION OF REVENUE]
 [2003, 2002, 2001]

	Canada	US	Mexico	Rest of World	TOTAL REVENUE
2003	44	22	19	15	\$714 MILLION

	Canada	US	Mexico	Rest of World	TOTAL REVENUE
2002	38	22	19	21	\$603 MILLION

	Canada	US	Mexico	Rest of World	TOTAL REVENUE
2001	47	29	6	18	\$614 MILLION

Revenue increased by \$111 million or 18% in 2003 over 2002. All of the increase came from the Canada, U.S. and Mexico operations. Operations in Canada increased in conjunction with increased drilling activity. This increased demand for services also resulted in generally improved pricing. Similarly, revenue and pricing in the U.S. operation responded to the increase in the average rig count from 830 in 2002 to 1,030 in 2003. The Mexico business benefited from the extension of the Burgos integrated services project and from the award of additional contracts outside of that project.

Combined revenue from the segment's other regional operations was flat year over year. Increased revenue associated with a large wireline contract with a Canadian-based company in the Middle East was offset by reduced controlled pressure drilling work in the North Sea. Although it improved late in the year, activity in Venezuela was also lower than 2002 as a result of the political unrest in that country. Other countries in the region have improved over the last half of the year.

Profitability of the segment improved year over year moving from an operating loss in 2002 of \$32 million to earnings of \$5 million in 2003. The effort to review and rationalize businesses in TS brought with it incremental expenses in the form of severance and closure costs and write-downs of unusable assets. These expenses totaled \$15 million in 2003. Operating and general and administrative expenses declined as a percentage of revenue due to cost reduction initiatives and economies of scale associated with certain fixed infrastructure costs. However, continued improvements are anticipated as we further develop our execution plan. This involves refining our personnel development, recruiting and training programs to make sure we have the appropriate people in place to facilitate the utilization of assets. It also involves standardizing our maintenance systems and operating procedures, all standard things that must be put in place to provide the foundation upon which to grow.

An important element in continuing the profitability improvements in TS is increased utilization of the new tools being put into service. Currently the

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

jobs being performed are usually isolated from one another requiring backup equipment for every location. As customer acceptance increases, more jobs will be occurring simultaneously in one geographic region requiring less backup equipment on a per job basis. Plans are also in place to refine our manufacturing processes to reduce the overall cost of tools being built. These developments should serve to reduce depreciation expense as a percentage of revenue.

Research and engineering expenditures increased in 2003 as tool development programs moved from the laboratory to field operations. During the initial stages of the roll out, product support initiatives were being performed by the research and engineering teams. With the commercialization of operations, this work has been transferred to the operations groups. The target for sustained research and engineering expenditures is 5% of revenue.

2002 COMPARED TO 2001

TS continued its geographic diversification efforts in 2002. Revenue declined by \$11 million or 1.8% in 2002 compared to 2001. The Canadian and U.S. operations saw revenue decline as a result of reduced activity levels. The year over year decline in the number of wells drilled amounted to approximately 20% in both markets. The U.S. operations were also hampered by delays in the roll out of the new suite of tools.

Revenue increased in all regions outside of Canada and the U.S. as the segment's expanded international presence facilitated the participation in a broader spectrum of projects. The political situation in Venezuela did have a negative effect on revenue as oil and gas production activity in that country was virtually shut down in the last six weeks of the year.

Having set up regional operations centers in 2001, the strategy was to establish brand recognition for Precision through successful completion of competitively bid projects. With these expanded operations, Precision increased its recognition as a viable alternative to the historical group of oilfield service providers in many international markets. However, the scope of the TS growth initiatives, in terms of both geography and product lines, combined with the impact of delays in the deployment of new technologies, resulted in operations support and administrative organizations that were uneconomic for the start-up revenue levels realized. This is also reflected in operating and general and administrative expense which grew 13.4% while revenue declined by 1.8%.

RENTAL AND PRODUCTION (STATED IN THOUSANDS OF CANADIAN DOLLARS)

Years ended December 31,	2003	% OF REVENUE	2002	% of Revenue
Revenue	\$ 210,724		\$ 192,840	
Expenses:				
Operating	147,911	70.2	139,781	72.5
General and administrative	10,479	5.0	9,518	4.9
Depreciation	12,533	5.9	13,159	6.8
Foreign exchange	451	0.2	292	0.2
Operating earnings	\$ 39,350	18.7	\$ 30,090	15.6

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

	2003	% INCREASE (DECREASE)	2002	% Increase (Decrease)
Equipment rental days (000's)	820	35.1	607	(34.4)
Plant maintenance man-days (000's)	272	5.0	259	12.6

2003 COMPARED TO 2002

Revenue in the Rental and Production segment increased by 9% in 2003 compared to 2002. Both the oilfield equipment rental and industrial plant maintenance operations contributed to the increase. Equipment rental days increased in conjunction with increased drilling activity and operating earnings in this business improved significantly as most expenses are fixed in nature.

The cornerstone to the plant maintenance operations continues to be the work performed at the oilsands projects in northern Alberta. The division's ability to offer the complete suite of cleaning, mechanical, catalyst and dredging services required to maintain these large projects, and the continued training and development of its employees, differentiates it from its competitors. Recognition of the value this business brings to its customers has resulted in continued steady revenue growth and consistent operating margins.

2002 COMPARED TO 2001

Revenue declined modestly as reductions in the oilfield equipment rental business was only partially offset by increases in the industrial plant maintenance operation. The rental business saw revenue decline in conjunction with reduced Canadian drilling activity. This also impacted overall segment profitability as the rental business has higher margins than the plant maintenance business.

The plant maintenance business benefited from commissioning work performed at a new heavy oil upgrading plant and continued high levels of maintenance work at oil sands projects in northern Alberta. Operating margins were consistent with 2001. During the year, this business was expanded through the acquisition of a vacuum truck operation in northern Alberta.

OTHER ITEMS

2003 COMPARED TO 2002

CORPORATE AND OTHER EXPENSES

Expenses in the Corporate and Other segment increased by \$4.1 million in 2003 compared to 2002. In contrast to last year, variable compensation payments tied to corporate performance increased in 2003. In addition, directors and officers insurance premiums have increased as a result of increased scrutiny of corporate governance practices of public equity market participants in North America and around the world. General and administrative expenses are also affected by the ongoing requirements surrounding Sarbanes-Oxley legislation.

INTEREST EXPENSE

Net interest expense remained constant at \$35 million in 2003 and 2002. The

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

impact of a \$24 million increase in average debt outstanding was offset by reduced interest rates. As anticipated at the end of last year, interest coverage, defined as operating earnings divided by net interest expense, returned to 2001 levels. Interest coverage in 2003, 2002 and 2001 was approximately 9, 4 and 8 times respectively, and is expected to improve in 2004 with the free cash flow being generated.

INCOME TAXES

The Corporation's effective tax rate on earnings from continuing operations before income taxes, non-controlling interest and goodwill amortization in 2003 was 27.3% compared to 25.3% in 2002. The Alberta government reduced tax rates by 0.5% in each of 2003 and 2002. Canadian GAAP requires that the effect of these rate reductions be reflected as a decrease of future tax expense. The impact of these rate reductions on tax expense was similar in 2003 and 2002 at \$3 million and \$2.6 million respectively. However, given the higher before tax earnings in 2003 compared to 2002, the impact of the reductions on the Corporation's effective tax rate amounted to 1.1 percentage points in 2003 versus 2.1 in 2002.

Similarly, the Corporation's organization structure generates tax savings which, in absolute dollar terms, are relatively consistent from year to year. In 2003 these tax savings reduced the effective tax rate by 4.1 percentage points compared to 9.4 in 2002.

In the absence of the above factors the Corporation's effective tax rate would have been 32.6% in 2003 compared to 36.8% in 2002. This decrease is a reflection of the tax rate reduction initiatives of the Canadian Federal and Alberta Provincial governments and of the mix of income from different tax rate jurisdictions. The Corporation's effective tax rate is expected to be in the range of 32 - 34% in 2004.

2002 COMPARED TO 2001

CORPORATE AND OTHER EXPENSES

Net expenses for Corporate and Other declined by \$1.2 million in 2002 compared to 2001. The primary reason was the reduction in variable compensation payments, which are tied to corporate performance.

INTEREST EXPENSE

Net interest expense declined by \$7.9 million in 2002 as a result of reduced cost of borrowing due to declining interest rates and reduced borrowing levels. The average debt outstanding in 2002 was \$568.4 million compared to \$630.8 million in 2001. Interest coverage, defined as operating earnings divided by net interest expense, declined to 4 times in 2002 compared to 8 times in 2001.

INCOME TAXES

The effective tax rate on earnings before income taxes and goodwill amortization was 25.3% in 2002 compared to 35.6% in 2001. This reduction is due to the combined impact of tax rate reductions instituted by both the Alberta and Canadian governments and income taxed in jurisdictions with lower tax rates.

The effective tax rate in 2002 and 2001 was reduced by 0.5% and 2%, respectively, as a result of tax rate decreases enacted by the Alberta government in those years. Canadian GAAP required that the effect of these rate reductions be reflected as a decrease of future tax expense. The impact of these rate reductions was \$2.6 million in 2002 and \$6.0 million in 2001.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

GOODWILL AMORTIZATION

In 2001, standards under both Canadian and U.S. GAAP were issued that eliminated the amortization of goodwill. These rules were adopted January 1, 2002 by the Corporation.

LIQUIDITY AND CAPITAL RESOURCES

Historically the oilfield services business has been very cyclical. In managing the risk of this volatility, Precision has adhered to its philosophy of maintaining a strong balance sheet. In addition, a strong balance sheet has allowed the Corporation to grow through acquisition by providing the financial flexibility to respond to attractive investment opportunities in the form of both acquisitions and internal growth. The following graph gives a historical perspective on how Precision has managed its cash flows and its debt levels.

[GRAPHIC OMITTED - BAR/LINE CHART]
[INVESTMENT, CASH FLOW and CAPITALIZATION]

	Debt to Capitalization Equals the Ratio of Long-term Debt to Long- term Debt Plus Equity	Investment Equals Net Cash Cost of Capital Expenditures and Business Acquisitions	Cash Flow Equals Funds From Operations
1999	20	39	101
2000	31	545	298
2001	26	372	449
2002	25	244	188
2003	19	297	358

In 2004 the Corporation expects cash flow from operations to approach \$400 million and net capital expenditures to amount to approximately \$320 million. Another significant source of cash has been proceeds from the exercise of employee stock options, which has contributed an average of \$23 million over each of the past three years ended December 31, 2003. In January 2004 the Corporation received \$25 million from the exercise of options and the total amount for the year is anticipated to exceed \$50 million.

As a Corporation with multiple lines of business, Precision also regularly assesses each unit from the perspective of strategic fit with future growth plans and profitability improvement initiatives. In 2003 the Corporation received \$67 million from the sale of business units identified as non-core, primarily the gas compression business carried on by Energy Industries Inc. In February 2004, the Corporation completed the sale of substantially all of the assets of Fleet Cementers, Inc. realizing proceeds of approximately \$26 million (US\$20 million). A similar transaction is being pursued with respect to the Polar Completions division.

The Corporation exited 2003 with a long-term debt to long-term debt plus equity ratio of 19% and a ratio of long-term debt to trailing cash flow from operations of 155%. Both measures showed improvement over 2002 when these ratios amounted to 25% and 258% respectively. Continued improvement is expected in 2004, barring the impact of any significant acquisitions.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Precision has a number of lines of credit available to finance its activities, the most significant of which is a \$350 million extendable revolving unsecured facility with a syndicate led by a Canadian chartered bank. At December 31, 2003, \$140 million had been borrowed under this facility, the majority of which was used to finance working capital requirements. Canadian oilfield activity peaks in the first quarter of every year with a

swift reduction in the second quarter due to spring breakup which precludes the movement of heavy equipment. As a result, accounts receivable are expected to increase by approximately \$175 million during the first quarter with a similar reduction in the second quarter.

The Corporation's contractual obligations are outlined in the following table:

(STATED IN THOUSANDS OF CANADIAN DOLLARS)	Total	Less Than 1 Year	Payments Due by P 1 - 3 Years	4
Long-term debt	\$ 415,951	\$ 16,566	\$ 239,570	
Capital lease obligations	629	592	37	
Operating leases	110,500	28,104	49,566	
Total contractual obligations	\$ 527,080	\$ 45,262	\$ 289,173	

CRITICAL ACCOUNTING ESTIMATES

This Management's Discussion and Analysis of Precision's financial condition and results of operations is based on its consolidated financial statements which are prepared in accordance with Canadian generally accepted accounting principles. The Corporation's significant accounting policies are described in Note 1 to its consolidated financial statements. The preparation of these financial statements requires that certain estimates and judgments be made that affect the reported assets, liabilities, revenues and expenses. These estimates and judgments are based on historical experience and on various other assumptions that are believed to be reasonable under the circumstances. Anticipating future events cannot be done with certainty, therefore these estimates may change as new events occur, more experience is acquired and as the Corporation's operating environment changes.

The accounting estimates believed to require the most difficult, subjective or complex judgments and which are the most critical to our reporting of results of operations and financial position are as follows:

ALLOWANCE FOR DOUBTFUL ACCOUNTS RECEIVABLE

The Corporation performs ongoing credit evaluations of our customers and grants credit based upon past payment history, financial condition and anticipated industry conditions. Customer payments are regularly monitored and a provision for doubtful accounts is established based upon specific situations and overall industry conditions. The Corporation's history of bad debt losses has been within expectations and generally limited to specific customer circumstances, however, given the cyclical nature of the oil and gas industry

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

and the inherent risk of successfully finding hydrocarbon reserves, a customer's ability to fulfill its payment obligations can change suddenly and without notice. In addition, many of our customers are located in international areas that are inherently subject to risks of economic, political and civil instabilities, which may impact our ability to collect those accounts receivable.

EXCESS AND OBSOLETE INVENTORY PROVISIONS

Quantities of inventory on hand are regularly reviewed and provisions for excess or obsolete inventory are established based on historical usage patterns and known changes to equipment or processes that would render specific items no longer usable in operations. Significant or unanticipated changes in business conditions could impact the amount and timing of any additional provision for excess or obsolete inventory that may be required. The TS segment of our operations involves the application of new technologies in its efforts to deliver superior products to our customers and therefore has a greater risk of obsolescence due to finding or developing better products. The TS inventories comprise 87% of our total inventory of \$99 million. These inventories are reviewed on a quarterly basis to assess the appropriateness of quantities and valuation.

IMPAIRMENT OF LONG-LIVED ASSETS

Long-lived assets, which includes property, plant and equipment, intangibles and goodwill, comprise the majority of the Corporation's assets. The carrying value of these assets is periodically reviewed for impairment or whenever events or changes in circumstances indicate that their carrying amounts may not be recoverable. This requires the Corporation to forecast future cash flows to be derived from the utilization of these assets based upon assumptions about future business conditions and technological developments. Significant, unanticipated changes to these assumptions could require a provision for impairment in the future. During the fourth quarter of 2003 the Corporation completed its goodwill assessment incorporating the work of independent valuation experts resulting in the conclusion that there was no impairment of the carrying value.

DEPRECIATION AND AMORTIZATION

The Corporation's property, plant and equipment and its intangible assets are depreciated and amortized based upon estimates of useful lives and salvage values. These estimates may change as more experience is gained, market conditions shift or new technological advancements are made. The high depreciation expense associated with the TS segment is anticipated to improve with the optimization of equipment fleet sizes in each geographic region.

INCOME TAXES

The Corporation uses the liability method which takes into account the differences between financial statement treatment and tax treatment of certain transactions, assets and liabilities. Future tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases. Valuation allowances are established to reduce future tax assets when it is more likely than not that some portion or all of the asset will not be realized. Estimates of future taxable income and the continuation of ongoing prudent tax planning arrangements have been considered in assessing the utilization of available tax losses. Changes in circumstances

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

and assumptions and clarification of uncertain tax regimes may require changes to the valuation allowances associated with the Corporation's future tax assets.

NEW ACCOUNTING STANDARDS

In 2003 the Canadian Institute of Chartered Accountants issued revised recommendations with respect to accounting for stock based compensation. Effective January 1, 2004 the Corporation will retroactively apply these new standards to all common share purchase options granted in 2002 and subsequent years. Under the new standard, the fair value of common share purchase options will be calculated at the date of grant and that value will be recorded as compensation expense over the vesting period of those grants. Under the previous Canadian accounting standard, the Corporation had the choice of using the intrinsic value method of accounting for grants of common share purchase options, which resulted in no associated compensation expense being recognized, and disclosing in a note to the financial statements the impact of expensing the fair value of option grants. This alternative still exists under U.S. generally accepted accounting principles.

BUSINESS RISKS

CRUDE OIL AND NATURAL GAS PRICES

The price received by our customers for the crude oil and natural gas they produce has a direct impact on cash flow available for them to finance the acquisition of services provided by the Corporation.

Prices for crude oil are established in a worldwide market in which supply and demand are subject to a vast array of economic and political influences. This results in very volatile pricing; a prime example of which is West Texas Intermediate crude oil trading at US\$12 per barrel in late 1998 and in excess of US\$40 per barrel at one point in 2000. Natural gas prices are established in a more "local" North American market due to the requirement to transport this gaseous product in pressurized pipelines. Demand for natural gas is seasonal and is correlated to heating and electricity generation requirements. Demand for natural gas and fuel oils is also affected by consumers ability to switch from one to the other to take advantage of relative price variations.

The Corporation partially manages the risk of volatile commodity prices, and thus volatile demand for its services, by striving to maintain cost structures that are scalable to activity levels. However, cost structures in Contract Drilling are more variable in nature than those within TS. In addition, our strong balance sheet and adherence to conservative financing practices provide the resilience to withstand and benefit from downturns and upturns in the business cycle.

North American oilfield service activity is focused on natural gas. One objective of the Corporation's international growth initiatives is to increase our exposure to crude oil activity in less cyclical markets.

WORKFORCE AVAILABILITY

The Corporation's ability to provide reliable services is dependent upon the availability of well trained, experienced crews to operate our field equipment. We must also balance the requirement to maintain a skilled workforce with the need to establish cost structures that vary as much as possible with activity levels.

Within Contract Drilling, our most experienced people are retained during

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

periods of low utilization by having them fill lower level positions on our field crews. The Corporation has established training programs for employees new to the oilfield service sector and we work closely with industry associations to ensure competitive compensation levels and to attract new workers to the industry as required.

Many of our Canadian businesses are currently experiencing manpower shortages. Over 50 drilling rigs have been running without relief crews, requiring them to shut down when crews need time off. Technology Services Canadian operations have been supported by additional people and equipment brought in from other regional operations to meet peak winter demand.

WEATHER

The ability to move heavy equipment in the Canadian oil and natural gas fields is dependent on weather conditions. As warm weather returns in the spring, the winter's frost comes out of the ground rendering many secondary roads incapable of supporting the weight of heavy equipment until they have thoroughly dried out. The duration of this "spring breakup" has a direct impact on the Corporation's activity levels. In addition, many exploration and production areas in northern Canada are accessible only in winter months when the ground is frozen hard enough to support equipment. The timing of freeze up and spring breakup affects the ability to move equipment in and out of these areas.

Working with customers, we strive to position equipment where possible such that it can be working on location during spring breakup, limiting the need to move equipment during this time period as much as possible. However, many uncontrollable factors affect our ability to plan in this fashion and the spring breakup, which can occur any time from late March through May, is traditionally our slowest time.

TECHNOLOGY

Technological innovation by oilfield service companies has improved the effectiveness of the entire exploration and production sector over the industry's 140-year history. Recently, development of directional and horizontal drilling, controlled pressure drilling, coil tubing drilling, and methods of providing real time data during drilling and production operations have increased production volumes and the recoverable amount of discovered reserves. Innovations such as 3-D and 4-D seismic have improved the success rate of exploration wells partially offsetting the decline in the quantity of drillable prospects.

Our ability to deliver more efficient services is critical to our continued success. The Corporation has continuously built upon its experience and teamed with customers to provide solutions to their unique problems. Our ability to design and build specialized equipment has kept us on the leading edge of technology. The success of our in-house designed and built Super Single(R) rig, both in Canada and abroad, is testimony of our dedication to these efforts.

The continued development of our Technology Services segment, and in particular the research and development work of Advantage R&D, Inc., puts the Corporation at another level where high-end technological innovation is paramount to success. We have a team of highly qualified experienced professionals, that has been assembled and working together for over two years in state-of-the-art testing facilities. The technologies they have developed over this time are at or near the commercial deployment stage, however, the success of future technological endeavours is never certain.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

ACQUISITION INTEGRATION

The Corporation has worked towards its strategic objective of becoming an integrated service provider of sufficient size to benefit from economies of scale and to provide the foundation from which to pursue international opportunities. Business acquisitions have been an important tool in this pursuit and will continue to be so in the future. Continued successful integration of new businesses, people and systems is key to our future success.

FOREIGN OPERATIONS

The Corporation is working hard to export its expertise and technologies to oil and gas producing regions around the world. With this comes the risk of dealing with business and political systems that are much different than we are accustomed to in North America. The Corporation has hired employees who have experience working in the international arena and it is committed to recruiting qualified resident nationals on the staffs of all of its international operations.

FOREIGN CURRENCY EXCHANGE RATES

The Corporation has a number of sources of foreign currency exchange risk. On international contracts, attempts are made to structure revenue streams such that a portion sufficient to match local expenditures is denominated in the local currency, with the remainder being denominated in U.S. dollars. In addition, many of our business units buy a portion of their parts and supplies from suppliers in the United States. Also, the manufacturing effort associated with the deployment of the new suite of tools is taking place in the U.S. As a result, the Corporation is presently a net payer of U.S. dollars.

MERGER AND ACQUISITION ACTIVITY

Merger and acquisition activity in the oil and gas exploration and production sector can impact demand for our services as customers focus on reorganization activities prior to committing funds to significant drilling and maintenance projects. Future merger and acquisition activity could have a short-term impact on our business, but in the long-term should result in a stronger, more active market.

OUTLOOK

The fortunes of the oilfield services business are dictated by current and anticipated future crude oil and natural gas prices. The supply and demand fundamentals that have brought prices to today's relatively high levels are not expected to change rapidly. Energy price prognosticators have historically focused on the supply side of the equation where geopolitical events can have a large impact on short-term supply and where consensus was generally that there was abundant supply to fill long-term requirements. This view is now starting to be questioned in some corners. The surplus crude oil production capacity of the Middle East is being examined with suggestions that it is not as high as once thought. Similarly, the ability to rapidly increase production of the vast crude oil reserves in the former Soviet Union is being slowed by the recognition of the large amount of infrastructure investment required. Recent world events have also brought security of supply issues to the top of the energy agenda for many countries.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The North American natural gas market is also facing supply challenges. Natural gas directed drilling activity has increased significantly in recent years, however this has only served to maintain production. Liquefied natural gas, once viewed as the element that would increase gas supplies and thus reduce prices, is now being thought of as a requirement to fill the void between future demand requirements and conventional production capabilities. It is not anticipated that the price of natural gas will experience sustained downward pressure from the supply side of the pricing equation any time soon.

Many analysts are now looking at the demand elements of energy pricing economics. Commodity prices have risen over the last number of years in an environment where the major economies of the world were generally in a period of slow growth. This is changing as growth rates in the major industrialized countries are beginning to recover. Of particular importance to the outlook for the demand for energy is the emergence of countries such as China where economic expansion is bringing new found purchasing power to a very large population. On a per capita basis, these populations use energy at a fraction of the rate of other industrialized nations. This should change as new products, such as automobiles and electric appliances, are introduced to these markets which in turn should drive exponential growth in energy demand.

On the basis of these fundamentals, Precision is optimistic about the prospects to operate and grow our businesses profitably. Canada will play a major role in supplying the energy needs of North America and our dominant position in that market will continue to be the cornerstone of the Corporation. From this strong foundation we will continue to step out into international markets where the opportunities are such that operations can reach an efficient size in a reasonable time frame. The strength of our balance sheet will allow us to examine acquisition opportunities that may allow this process to be accelerated.

MANAGEMENT'S REPORT TO THE SHAREHOLDERS

The accompanying consolidated financial statements and all information in the Annual Report are the responsibility of management. The consolidated financial statements have been prepared by management in accordance with the accounting policies in the notes to financial statements. When necessary, management has made informed judgments and estimates in accounting for transactions which were not complete at the balance sheet date. In the opinion of management, the financial statements have been prepared within acceptable limits of materiality, and are in accordance with Canadian generally accepted accounting principles (GAAP) appropriate in the circumstances. The financial information elsewhere in the Annual Report has been reviewed to ensure consistency with that in the consolidated financial statements.

Management has prepared Management's Discussion and Analysis (MD&A). The MD&A is based upon the Corporation's financial results prepared in accordance with Canadian GAAP. The MD&A compares the audited financial results for the twelve months ended December 31, 2003 to December 31, 2002 and the twelve months ended December 31, 2002 to December 31, 2001. Note 15 to the consolidated financial statements describes the impact on the consolidated financial statements of significant differences between Canadian and United States GAAP.

Management maintains appropriate systems of internal control. Policies and procedures are designed to give reasonable assurance that transactions are properly authorized, assets are safeguarded and financial records properly maintained to provide reliable information for the preparation of financial statements.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

KPMG LLP, an independent firm of Chartered Accountants, was engaged, as approved by a vote of shareholders at the Corporation's most recent Annual and Special Meeting, to audit the consolidated financial statements in accordance with generally accepted auditing standards in Canada and provide an independent professional opinion.

The Audit Committee of the Board of Directors, which is comprised of three independent and unrelated directors who are not employees of the Corporation, has discussed the consolidated financial statements, including the notes thereto, with management and external Auditors. The consolidated financial statements have been approved by the Board of Directors on the recommendation of the Audit Committee.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the consolidated balance sheets of Precision Drilling Corporation as at December 31, 2003 and 2002 and the consolidated statements of earnings and retained earnings and cash flow for each of the years in the three-year period ended December 31, 2003. These consolidated financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2003 and 2002 and the results of its operations and its cash flow for each of the years in the three-year period ended December 31, 2003 in accordance with Canadian generally accepted accounting principles.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(TABULAR AMOUNTS STATED IN THOUSANDS OF DOLLARS EXCEPT PER SHARE AMOUNTS)

Precision Drilling Corporation (the "Corporation") is a global oilfield services company providing a broad range of drilling, production and evaluation services with focus on fulfilling customer needs through fit-for-purpose technologies.

The financial statements are prepared in accordance with generally accepted accounting principles (GAAP) in Canada. Management is required to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from these estimates.

NOTE 1: SIGNIFICANT ACCOUNTING POLICIES

(a) PRINCIPLES OF CONSOLIDATION:

The consolidated financial statements include the accounts of the Corporation and its subsidiaries, all of which, except one, are wholly-owned.

(b) INVENTORY:

Inventory is carried at the lower of average cost and replacement cost.

(c) PROPERTY, PLANT AND EQUIPMENT:

Drilling rig equipment is depreciated by the unit-of-production method based on 3,650 drilling days with a 20% salvage value. Drill pipe and drill collars are depreciated over 1,100 drilling days and have no salvage value. Service rig equipment is depreciated by the unit-of-production method based on 24,000 hours for single and double rigs and 48,000 hours for heavy double rigs. Service rigs have a 20% salvage value.

Field technical equipment is depreciated by the straight-line method over periods ranging from 2 to 10 years.

Rental equipment is depreciated by the straight-line method over periods ranging from 10 to 15 years. Other equipment is depreciated by the straight-line method over periods ranging from 3 to 10 years.

Light duty vehicles are depreciated by the straight-line method over 4 years. Heavy-duty vehicles are depreciated by the straight-line method over periods ranging from 7 to 10 years.

Buildings are depreciated by the straight-line method over

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

periods ranging from 10 to 30 years.

(d) INTANGIBLES:

Intangibles, which are comprised of acquired patents, are recorded at cost and amortized by the straight-line method over their useful lives ranging from 5 to 15 years.

(e) GOODWILL:

Goodwill is the residual amount that results when the purchase price of an acquired business exceeds the sum of the amounts allocated to the assets acquired, less liabilities assumed, based on their fair values. Goodwill is allocated as of the date of the business combination to the Corporation's reporting segments that are expected to benefit from the business combination.

Goodwill is not amortized and is tested for impairment annually in the fourth quarter, or more frequently if events or changes in circumstances indicate that the asset might be impaired. The impairment test is carried out in two steps. In the first step, the carrying amount of the reporting segment is compared with its fair value. When the fair value of a reporting segment exceeds its carrying amount, goodwill of the reporting segment is considered not to be impaired and the second step of the impairment test is unnecessary. The second step is carried out when the carrying amount of a reporting segment exceeds its fair value, in which case the implied fair value of the reporting segment's goodwill is compared with its carrying amount to measure the amount of the impairment loss, if any. The implied fair value of goodwill is determined in the same manner as the value of goodwill is determined in a business combination described in the preceding paragraph, using the fair value of the reporting segment as if it was the purchase price. When the carrying amount of the reporting segment's goodwill exceeds the implied fair value of the goodwill, an impairment loss is recognized in an amount equal to the excess.

(f) INVESTMENTS:

Investments in shares of associated companies, over which the Corporation has significant influence, are accounted for by the equity method. Other investments are carried at cost. If there are other than temporary declines in value, these investments are written down to their net realizable value.

(g) DEFERRED FINANCING COSTS:

Costs associated with the issuance of long-term debt are deferred and amortized by the straight-line method over the term of the debt. The amortization is included in interest expense.

(h) INCOME TAXES:

The Corporation follows the liability method of accounting for future income taxes. Under the liability method, future income tax assets and liabilities are determined based on "temporary differences" (differences between the accounting basis and the tax basis of the assets and liabilities), and are measured using the currently enacted, or substantively enacted, tax rates and

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

laws expected to apply when these differences reverse. Income tax expense is the sum of the Corporation's provision for current income taxes and the difference between opening and ending balances of the future income tax assets and liabilities.

(i) REVENUE RECOGNITION:

The Corporation's services are generally sold based upon purchase orders or contracts with the customer that include fixed or determinable prices based upon daily, hourly or job rates. Customer contract terms do not include provisions for significant post-service delivery obligations. Revenue is recognized when services and equipment rentals are rendered and only when collectability is reasonably assured.

(j) RETIREMENT ALLOWANCE:

The Corporation has entered into an employment agreement with a senior officer, which provides for a one-time payment upon retirement. The amount of this retirement allowance increases by a fixed amount for each year of service over a ten year period commencing April 30, 1996. The estimated cost of this benefit is accrued and charged to earnings on a straight-line basis over the 10-year period.

(k) FOREIGN CURRENCY TRANSLATION:

Accounts of foreign operations, all of which are considered financially and operationally integrated, are translated to Canadian dollars using average exchange rates for the year for revenue and expenses. Monetary assets and liabilities are translated at the year-end current exchange rate and non-monetary assets and liabilities are translated using historical rates of exchange. Gains or losses resulting from these translation adjustments are included in net earnings.

Transactions in foreign currencies are translated at rates in effect at the time of the transaction. Monetary assets and liabilities are translated at current rates. Gains and losses are included in net earnings.

(l) STOCK-BASED COMPENSATION PLANS:

The Corporation has equity incentive plans, which are described in Note 8. No compensation expense is recognized for these plans when stock options are issued. Any consideration received on exercise of the stock options is credited to share capital. The Corporation discloses the pro forma effect of stock options grants, had those grants been accounted for following the fair value method.

Effective January 1, 2004, the Corporation will retroactively adopt new required Canadian accounting standards that will apply the fair value method to all stock options granted in 2002 and subsequent years.

Under the fair value method, the Corporation will calculate the fair value of stock option grants and record that fair value as compensation expense over the vesting period of those grants.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

(m) RESEARCH AND ENGINEERING:

Research and engineering costs are charged to income as incurred. Costs associated with the development of new operating tools and systems are expensed during the period unless the recovery of these costs can be reasonably assured given the existing and anticipated future industry conditions. Upon successful completion and field testing of the tools any deferred costs are transferred to the related capital asset accounts.

(n) PER SHARE AMOUNTS:

Basic per share amounts are calculated using the weighted average number of shares outstanding during the year. Diluted per share amounts are calculated based on the treasury stock method, which assumes that any proceeds obtained on exercise of options would be used to purchase common shares at the average market price during the period. The weighted average number of shares outstanding is then adjusted by the net change.

(o) COMPARATIVE FIGURES:

Certain comparative figures have been reclassified to conform with the current financial statement presentation.

NOTE 2: ACCOUNTING CHANGES

(a) ACCOUNTING FOR BUSINESS COMBINATIONS, GOODWILL AND OTHER INTANGIBLE ASSETS:

Effective January 1, 2002, the Corporation prospectively adopted the new Canadian accounting standards relating to business combinations and goodwill and other intangible assets, as outlined in Note 1(e).

(b) FOREIGN CURRENCY TRANSLATION:

Effective January 1, 2002, the Corporation adopted, on a retroactive basis, a new Canadian accounting standard whereby unrealized gains or losses are not deferred and amortized as previously required but rather expensed as incurred.

As a result of this change, unrealized gains and losses related to translation of foreign currency denominated long-term debt are no longer deferred and amortized over the term of the debt but are expensed as incurred. Prior period results have been restated to reflect this change. The retroactive application of this standard has reduced the opening balance of retained earnings by \$1.6 million and \$115,000 at January 1, 2002 and January 1, 2001 respectively.

NOTE 6: BANK INDEBTEDNESS

The Corporation has available a revolving credit loan facility of US\$25.0 million. Advances under this facility bear interest at the bank's prime lending rate less 0.75%. The facility is renewable and extendable annually at the option of the lenders. As at December 31, 2003 \$17.9 million (US\$13.7 million) was drawn on this facility as compared to \$14.3 million (US\$9.2 million) at December 31, 2002. Availability of this facility is further reduced by outstanding letters of credit in the amount of \$1.1 million (US\$850,000).

As at December 31, 2003 the Corporation has included \$130.0 million (December 31, 2002 - \$80.0 million) of its extendable revolving unsecured facility in bank indebtedness, as the funds were

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

used to finance working capital.

NOTE 7: LONG-TERM DEBT

	2003	
<hr/>		
Unsecured debentures - Series 1	\$ 200,000	\$ 200,
Unsecured debentures - Series 2	150,000	150,

Less amounts due within one year	17,158	27,
<hr/>		
	\$ 399,422	\$ 514,
<hr/>		

The \$200.0 million 6.85% Series 1 unsecured debentures mature June 26, 2007 and have an effective interest rate of 7.44% after taking into account deferred financing costs. The debentures are redeemable at any time at the option of the Corporation upon payment of a redemption price equal to the greater of an amount calculated with reference to the yield on a Government of Canada bond with the same maturity, and par.

The \$150.0 million 7.65% Series 2 unsecured debentures mature October 27, 2010 and have an effective interest rate of 7.71% after taking into account deferred financing costs. The debentures are redeemable at any time at the option of the Corporation upon payment of a redemption price equal to the greater of an amount calculated with reference to the yield on a Government of Canada bond with the same maturity, and par.

The \$3.5 million unsecured term financing facility with Export Development Canada (EDC) is repayable in semi-annual installments, matures on January 20, 2004 and bears interest at six-month U.S. Libor plus applicable margin. The margin is dependent upon the Corporation's credit rating, which at December 31, 2003 resulted in a margin of 0.8%.

The \$26.2 million unsecured term financing facility with EDC is repayable over five years in semi-annual installments, matures September 15, 2005 and bears interest at six-month U.S. Libor plus applicable margin. The margin is dependent upon the Corporation's credit rating, which at December 31, 2003 results in a margin of 0.9%.

The \$26.5 million unsecured financing facility with EDC matures on October 24, 2004 and bears interest at six-month U.S. Libor plus applicable margin. The margin is dependent upon the Corporation's margin on its \$350.0 million extendable revolving unsecured credit facility, which at December 31, 2003 resulted in a margin of 0.8%. The facility is extendable upon mutual agreement between the Corporation and the Lender, or can be converted, at the Corporation's

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

option, to a term loan repayable in two equal semi-annual installments, with the first payment due April 25, 2005.

The Corporation has an extendable revolving unsecured facility of \$350.0 million (or U.S. equivalent) with a syndicate led by a Canadian chartered bank. Advances are available at either the bank's prime lending rate, U.S. base rate, U.S. Libor plus applicable margin or Bankers' Acceptance plus applicable margin or in combination. The applicable margin is dependent on the Corporation's credit rating and the percentage of the total facility outstanding, which at December 31, 2003 resulted in a margin of 0.8%. The facility is extendable annually at the option of the lenders. Should this facility not be extended, outstanding amounts will be transferred to a two-year term facility repayable in equal quarterly installments. As at December 31, 2003 the Corporation had drawn \$139.8 million under this facility, of which \$130.0 million has been included in bank indebtedness as the funds were used to finance working capital.

Principal repayments over the next five years are as follows:

2004	\$ 17,158
2005	39,588
2006	19
2007	200,000
2008	--
Thereafter	159,815
	\$ 416,580

NOTE 8: SHARE CAPITAL

(a) AUTHORIZED:

Options exercised	778,925	23,613
BALANCE, DECEMBER 31, 2003	54,845,678	\$ 936,529

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

(c) EQUITY INCENTIVE PLANS:

The Corporation has equity incentive plans under which a combined total of 3,966,711 options to purchase common shares are reserved to be granted to employees and directors. Of the amount reserved, 3,393,194 options have been granted. Under these plans, the exercise price of each option equals the market value of the Corporation's stock on the date of the grant and an option's maximum term is 10 years. Options vest over a period from 1 to 4 years from the date of grant as employees or directors render continuous service to the Corporation.

A summary of the equity incentive plans as at December 31, 2001, 2002 and 2003, and changes during the periods then ended is presented below:

	Options Outstanding	Range of Exercise Price
Outstanding at December 31, 2000	4,474,103	\$ 13.50 - 54.20
Granted	1,055,350	31.05 - 65.90
Exercised	(855,935)	13.50 - 44.38
Cancelled or expired	(267,237)	25.50 - 52.39
Outstanding at December 31, 2001	4,406,281	\$ 13.50 - 65.90
Granted	786,050	41.06 - 52.61
Exercised	(890,715)	13.50 - 44.38
Cancelled or expired	(182,288)	25.50 - 65.90
Outstanding at December 31, 2002	4,119,328	\$ 13.50 - 65.90
Granted	416,000	49.28 - 51.04
Exercised	(778,925)	13.50 - 51.00
Cancelled or expired	(363,209)	31.05 - 65.90
OUTSTANDING AT DECEMBER 31, 2003	3,393,194	\$ 13.50 - 65.90

The range of exercise prices for options outstanding at December 31, 2003 are as follows:

	Total Options Outstanding	Weighted Average Exercise Price	Weighted Average Remaining Contractual Life (Years)
Range of Exercise Prices:	Number		

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

\$ 13.50 - 19.99	161,486	\$ 14.12	0.39
20.00 - 29.99	51,300	28.98	0.79
30.00 - 39.99	1,089,665	34.96	1.21
40.00 - 49.99	1,029,943	42.86	3.34
50.00 - 59.99	1,038,300	51.98	4.69
60.00 - 65.90	22,500	65.81	2.55

\$ 13.50 - 65.90	3,393,194	\$ 41.69	2.89

In accordance with the Corporation's stock option plans, these options have an exercise price equal to the market price at date of grant. The per share weighted average fair value of stock options granted during the year ended December 31, 2003 was \$19.48 (2002 - \$20.85) based on the date of grant using the Black-Scholes option pricing model with the following assumptions: average risk-free interest rate of 3.47% (2002 - 4.53%), average expected life of 3.42 years (2002 - 3.88 years) and expected volatility of 47% (2002 - 49%).

Had the Corporation determined compensation costs based on the fair value at the date of grant for stock options granted since January 1, 2002; net earnings and earnings per share (EPS) would have decreased to the pro forma amounts indicated below. These pro forma amounts reflect compensation cost amortized over the option's vesting period.

2003			
Years Ended December 31	AS REPORTED	PRO FORMA	As Re

Net earnings	\$ 188,676	\$ 178,993	\$
Basic EPS	\$ 3.47	\$ 3.29	\$
Diluted EPS	\$ 3.41	\$ 3.24	\$

NOTE 9: EMPLOYEE BENEFIT PLANS

The Corporation has a defined contribution employee benefit plan covering a significant number of its employees. The Corporation matches individual employee contributions up to 5% of the employee's compensation. Employer matching contributions under the plan totalled \$7.5 million for the year ended December 31, 2003 (year ended December 31, 2002 - \$6.9 million; year ended December 31, 2001 - \$6.3 million).

With respect to the retirement allowance described in Note 1(j), the Corporation charged \$351,000 to earnings in 2003 (2002 - \$371,000; 2001 - \$360,000) and at December 31, 2003 had accrued a total of \$2.5 million, which amount is included in accounts payable and accrued liabilities.

NOTE 10: COMMITMENTS

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The Corporation has commitments for operating lease agreements, primarily for vehicles and office space, in the aggregate amount of \$110.5 million. Payments over the next five years are as follows:

2004	\$ 28,104
2005	21,439
2006	15,948
2007	12,179
2008	11,168

Rent expense included in the statements of earnings is as follows:

2003	\$ 23,924
2002	18,085
2001	16,923

NOTE 11: INCOME TAXES

The provision for income taxes differs from that which would be expected by applying statutory rates. A reconciliation of the difference is as follows:

		2003	

Earnings before income taxes, non-controlling interest, discontinued operations and goodwill amortization		\$ 265,415	\$
Income tax rate		36%	

Expected income tax provision		\$ 95,549	\$
Add (deduct):			
Non-deductible expenses		2,380	
Income taxed in jurisdictions with lower tax rates		(14,062)	
Non-taxable disposition of investment		(2,327)	
Other		(6,020)	

		75,520	
Reduction of future tax balances due to substantively enacted tax rate reductions		(2,988)	

		\$ 72,532	\$

In both 2003 and 2002, the Province of Alberta enacted a 0.5% reduction in tax rates and in 2001 it enacted a 2% reduction in tax rates. These rate changes have been reflected as a reduction in future tax expense in 2003, 2002 and 2001.

The Corporation's operations are complex and computation of the provision for income taxes involves tax interpretations, regulations and legislation that are continually changing. There are tax matters that have not yet been confirmed by taxation authorities, however, management believes the provision for income taxes is adequate.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The net future tax liability is comprised of the tax effect of the following temporary differences:

	2003
<hr style="border-top: 1px dashed black;"/>	
Liabilities:	
Property, plant and equipment and intangibles	\$ 290,371
Assets held in partnership with different tax year	92,163
Deferred financing costs	1,774
<hr style="border-top: 1px dashed black;"/>	
	\$ 384,308
<hr style="border-top: 1px dashed black;"/>	
Assets:	
Losses carried forward	\$ 63,431
Accrued liabilities	278
<hr style="border-top: 1px dashed black;"/>	
	63,709
<hr style="border-top: 1px dashed black;"/>	
	\$ 320,599
<hr style="border-top: 1px dashed black;"/>	

The Corporation has available losses of \$251.4 million of which the benefit of \$181.9 million has been recognized. These losses expire depending upon the year incurred and various limitations under tax codes in the jurisdictions in which the losses were incurred.

NOTE 12: PER SHARE AMOUNTS

Per share amounts have been calculated on the weighted average number of common shares outstanding. The weighted average shares outstanding for the year ended December 31, 2003 was 54,430,468 (year ended

December 31, 2002 - 53,701,873; year ended December 31, 2001 - 52,952,879).

Diluted per share amounts reflect the dilutive effect of the exercise of the options outstanding. The diluted shares for the year ended December 31, 2003 was 55,299,920 (year ended December 31, 2002 - 54,815,167; year ended December 31, 2001 - 54,198,348).

NOTE 13: SIGNIFICANT CUSTOMERS

During the years ended December 31, 2003, 2002 and 2001, no one customer accounted for more than 10% of the Corporation's revenue.

NOTE 14: ACQUISITIONS

Acquisitions have been accounted for by the purchase method with results of operations acquired included in the financial statements from the effective date of acquisition. The details of acquisitions for the past three years are as follows.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

In February 2003, the Corporation completed the acquisition of the operating assets of MacKenzie Caterers (1984) Ltd., a provider of oilfield camp and catering services in western Canada, for \$6.8 million. No value was assigned to intangibles or goodwill.

During the year ended December 31, 2002, the Corporation completed the following business acquisitions:

- (a) Acquisition of the business assets of NightHawk Vacuum Services Ltd. (NightHawk) in September 2002. NightHawk provides oilfield vacuum services in northern Alberta and British Columbia.
- (b) Paid additional consideration in conjunction with an acquisition made in 2001. This additional consideration was payable based on the development of a commercially viable technology.

	NightHawk	Other

Net assets acquired at assigned values:		
Working capital	\$ (47)	\$ --
Property, plant and equipment	3,097	--
Goodwill	--	1,544

Consideration:		
Cash	\$ 3,050	\$ 1,544
	-----	-----

During the year ended December 31, 2001, the Corporation completed business acquisitions, the most significant of which was the acquisition of all the issued and outstanding shares of BecField Drilling Services Ltd. (BecField) in January 2001. BecField provides directional drilling and measurement-while-drilling services through its technical field and support personnel to the onshore and offshore oil and gas industry. It has established operations in Europe and the Middle East.

	BecField	Other

 (b) INCLUDES CASH OF \$ 1,115

NOTE 15: UNITED STATES GENERALLY ACCEPTED ACCOUNTING PRINCIPLES

These financial statements have been prepared in accordance with Canadian GAAP which, in the case of the Corporation conform with United States generally accepted accounting principles (U.S. GAAP) in all material respects, except as follows:

a) INCOME TAXES:

In 2000 the Corporation adopted the liability method as described in Note 1 without restatement of prior years. As a result, the Corporation recorded an adjustment to retained earnings and future tax liability in the amount of \$70 million at January 1, 2000. U.S. GAAP required the use of the liability method prescribed in the Statement of Financial Accounting Standards (SFAS) No. 109, which substantially conforms with the Canadian GAAP accounting standard adopted in 2000. Application of U.S. GAAP in years prior to 2000 would have resulted in \$70 million of additional goodwill being recognized at January 1, 2000 as opposed to an implementation adjustment to retained earnings allowed under Canadian GAAP. In 2001, 2002 and 2003 the U.S. GAAP financial statements would reflect an increase in goodwill of \$63 million and a corresponding increase in retained earnings. An additional charge to earnings of \$3.5 million in 2001 would be required related to the amortization of the goodwill.

Under Canadian GAAP, future tax liabilities and assets are calculated by reference to current tax legislation and proposed legislation that is considered substantively enacted but not yet enacted into law. U.S. GAAP requires that only enacted income tax legislation be used for calculation of future tax amounts. In 2000 the Federal Government of Canada introduced tax rate reductions that were substantively enacted at December 31, 2000 but that were not passed into legislation until 2001. The resulting reduction of future tax balances recognized under Canadian GAAP in 2000 would not be recognized under U.S. GAAP until 2001.

The application of U.S. accounting principles would have the following impact on the consolidated financial statements:

CONSOLIDATED STATEMENTS OF EARNINGS

Years ended December 31,	2003	2002
Net earnings under Canadian GAAP	\$ 188,676	\$ 91,000
Adjustments under U.S. GAAP:

	-----	-----
	\$2,908,385	\$2,971,414
	-----	-----

CONSOLIDATED STATEMENT OF CASH FLOWS

The application of U.S. accounting principles would have no impact on the consolidated statement of cash flows.

STOCK COMPENSATION

In 2003 and 2002 Canadian GAAP and U.S. GAAP were substantially the same with respect to stock compensation. Prior to 2002, U.S. GAAP required the disclosure of the impact of using fair value accounting for stock options if in fact this alternative was not used. Canadian GAAP did not require such disclosure. The per share weighted average fair value of stock options granted during the year ended December 31, 2001 was \$19.87 on the date of grant using the Black-Scholes option pricing model with the following assumptions: risk free interest rate of 5.75%, expected life of 5 years and expected volatility of 49%.

Had the Corporation determined compensation cost based on the fair value at the date of grant for its stock options under SFAS 123, net earnings in accordance with U.S. GAAP would have decreased by \$12.2 million to \$190.8 million (basic EPS - \$3.60) for the year ended December 21, 2001.

NOTE 16: SEGMENTED INFORMATION

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The Corporation operates in three industry segments. Contract Drilling includes drilling rigs, service rigs and hydraulic well assist snubbing units, procurement and distribution of oilfield supplies, camp and catering services, and manufacture, sale and repair of drilling equipment. Technology Services includes wireline, directional drilling, measurement-while-drilling/logging-while-drilling services, separation services, and the design, manufacture and marketing of polycrystalline diamond compact drill bits. Rental and Production includes oilfield equipment rental services and industrial process services.

2003	CONTRACT DRILLING	TECHNOLOGY SERVICES	RENTAL AND PRODUCTION

Assets	2,175,877	475,481	2,651,358

NOTE 17: FINANCIAL INSTRUMENTS

(a) FAIR VALUE

The carrying value of cash, accounts receivable and accounts payable and accrued liabilities approximate their fair value due to the relatively short period to maturity of the instruments. The fair value of long-term debt, exclusive of the unsecured debentures, approximates its carrying value as it bears interest at floating rates. The \$200 million Series 1 debentures have a fair value of approximately \$216.2 million as at December 31, 2003 (December 31, 2002 - \$210.5 million) and the \$150 million Series 2 unsecured debentures have a fair value of approximately \$170.8 million at December 31, 2003 (December 31, 2002 - \$161.1 million). As at December 31, 2003 investments have a carrying value of \$3.8 million (December 31, 2002 - \$11.1 million) and a fair value of approximately \$5.2 million (December 31, 2002 - \$12.7 million).

(b) CREDIT RISK

Accounts receivable includes balances from a large number of customers. The Corporation assesses the credit worthiness of its customers on an ongoing basis as well as monitoring the amount and age of balances outstanding. Accordingly, the Corporation views the credit risks on these amounts as normal for the industry. As at December 31, 2003 the Corporation's allowance for doubtful accounts was \$16.0 million (December 31, 2002 - \$14.9 million).

(c) INTEREST RATE RISK

The Corporation manages its exposure to interest rate risks through a combination of fixed and floating rate borrowings. As at December 31, 2003, 39% of its total borrowings was at floating rates.

(d) FOREIGN CURRENCY RISK

The Corporation is exposed to foreign currency fluctuations in relation to its international operations; however, management believes this exposure is not material to its overall operations.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

NOTE 18: SUPPLEMENTAL INFORMATION

	2003	2002
Cash interest paid	\$ 36,721	\$ 35,600

	2003
Accounts payable	\$ 62,950
Accrued liabilities	
Payroll	43,900
Other	153,680
	\$ 260,530

NOTE 19: CONTINGENCIES

The Corporation, through the performance of its services and product sales obligations, is sometimes named as a defendant in litigation. One such case relates to a former agent of the Corporation in Indonesia who filed a suit in Indonesian courts seeking a pronouncement that they be the sole agent for certain of the Corporation's product lines in Indonesia and they are seeking damages of US\$17.5 million. This matter is at trial and all written evidence and oral testimony has been presented by all parties. The outcome of this and other claims is not determinable at this time; however, their ultimate resolution is not expected to have a material adverse effect on the Corporation.

The Corporation maintains a level of insurance coverage deemed appropriate by management and for matters for which insurance coverage can be acquired.

NOTE 20: DISCONTINUED OPERATIONS

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

On March 6, 2003, the Corporation sold Energy Industries Inc., a wholly-owned subsidiary included in the Rental and Production segment, for \$60.0 million cash. The effective date of the transaction was January 1, 2003. Energy Industries designed and manufactured modularized natural gas compression packages. Although Energy Industries had been profitable since its acquisition by Precision in 1996, the compression packaging business was determined to be not core to the Corporation's energy services globalization strategy.

In May 2003 the Corporation sold its 50% interest in Energy Equipment Rentals General Partnership ("EER") and Oil Drilling Exploration (Argentina) SA ("OD&E") for cash proceeds of \$6.9 million, net of transaction costs. Both entities were components of the Contract Drilling segment.

The review of the business plan for the Technology Services segment was completed in the fourth quarter of 2003. One of the outcomes of this process was the identification of two product lines, namely pressure pumping and completion services carried on by the Fleet Cementers and Polar Completions divisions respectively, as being not core to the segment's ongoing growth initiatives. As a result, a program has been initiated to dispose of these businesses and discussions are being held with interested parties.

Results of the operations of these businesses have been classified as results of discontinued operations. The following table provides additional information with respect to amounts included in the results of discontinued operations:

	2003	2002
Gain on disposal of Energy Industries	\$ 13,071	\$ --
Gain on disposal of EER and OD&E	4,389	--
	\$ 17,460	\$ --

Income taxes payable	(772)	282	(688)
	\$ 7,245	\$ 4,604	\$ (11,571)

NOTE 21: GUARANTEES

The Corporation has entered into agreements indemnifying certain parties primarily with respect to tax and specific third party claims associated with businesses sold by the Corporation. Due to the nature of the indemnifications, the maximum exposure under these agreements cannot be estimated. No amounts have been recorded for such indemnities as the Corporation's obligations under them are not probable and estimable.

CERTIFICATIONS AND DISCLOSURE REGARDING CONTROLS AND PROCEDURES.

- (a) CERTIFICATIONS. See Exhibits 99.1 and 99.2 to this Annual Report on Form 40-F.
- (b) DISCLOSURE CONTROLS AND PROCEDURES. As of the end of the registrant's fiscal year ended December 31, 2003, an evaluation of the effectiveness of the registrant's "disclosure controls and procedures" (as such term is defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended (the "Exchange Act")) was carried out by the registrant's principal executive officer and principal financial officer. Based upon that evaluation, the registrant's principal executive officer and principal financial officer have concluded that as of the end of that fiscal year, the registrant's disclosure controls and procedures are effective to ensure that information required to be disclosed by the registrant in reports that it files or submits under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission rules and forms.

It should be noted that while the registrant's principal executive officer and principal financial officer believe that the registrant's disclosure controls and procedures provide a reasonable level of assurance that they are effective, they do not expect that the registrant's disclosure controls and procedures or internal control over financial reporting will prevent all errors and fraud. A control system, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

- (c) CHANGES IN INTERNAL CONTROL OVER FINANCIAL REPORTING. During the fiscal year ended December 31, 2003, there were no changes in the registrant's internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, the registrant's internal control over financial reporting.

NOTICES PURSUANT TO REGULATION BTR.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

None.

AUDIT COMMITTEE FINANCIAL EXPERT.

The registrant's board of directors has determined that H. Garth Wiggins, a member of the registrant's audit committee, qualifies as an "audit committee financial expert" (as such term is defined in Form 40-F). Mr. Wiggins is "independent" as such term is defined in the NYSE listing standards.

CODE OF ETHICS.

The registrant has adopted a "code of ethics" (as that term is defined in Form 40-F), entitled the "Business Conduct and Ethics Practice" (the "Code of Ethics"), that applies to its principal executive officer, principal financial officer, principal accounting officer or controller, and persons performing similar functions (together, the "Financial Supervisors").

The Code of Ethics is available for viewing on the registrant's website at www.precisiondrilling.com.

Since the adoption of the Code of Ethics, there have not been any amendments to the Code of Ethics or waivers, including implicit waivers, from any provision of the Code of Ethics.

PRINCIPAL ACCOUNTANT FEES AND SERVICES.

40

The following table provides information about the fees billed to the registrant for professional services rendered by KPMG LLP during fiscal 2003 and 2002:

(CANADIAN \$000)	2003	2002
Audit Fees	\$1,295	\$1,088
Audit-Related Fees	--	\$67
Tax Fees	\$703	\$535
All Other Fees	\$618	\$135
Total	\$2,616	\$1,825

AUDIT FEES. Audit fees consist of fees for the audit of the registrant's annual financial statements or services that are normally provided in connection with statutory and regulatory filings or engagements.

AUDIT-RELATED FEES. Audit-related fees consist of fees for assurance and related services that are reasonably related to the performance of the audit or review of the registrant's financial statements and are not reported as Audit Fees. During fiscal 2002, the services provided in this category related to consultation and research of accounting and audit-related issues.

TAX FEES. Tax fees consist of fees for tax compliance services, tax advice and tax planning. During fiscal 2003 and 2002, the services provided in this category included assistance and advice in relation to the preparation of corporate income tax returns for the company and its subsidiaries, tax advice and planning, commodity tax and property tax consultation.

ALL OTHER FEES.

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

Other fees in 2003 included investigative and forensic services, translation of financial statements and information, consultation regarding compliance with Sarbanes Oxley implementation and advice on foreign registrations. In 2002 other fees included translation of financial statements and information, investigative and forensic services and advice on foreign registrations.

PRE-APPROVAL POLICIES AND PROCEDURES

For audit services related to the consolidated financial statements, the independent auditor provides the committee with an audit engagement letter outlining the scope of the audit to be performed relating to the fiscal year. If agreed to by the committee, the engagement letter is formally accepted. After acceptance of the engagement letter the committee reviews an audit plan, presented by the auditor, including an audit services fee proposal.

The company's auditor presents, at each audit committee meeting a list of services which management has requested the auditor perform. The auditor and management each confirm to the committee that each service proposed is permissible under all applicable legal requirements. If the committee is satisfied that it is appropriate for the auditor to perform the services, the services are approved, enabling the auditor to commence provision of those services.

In circumstances where the auditor is requested to perform non-audit services not previously approved by the committee, the audit committee chair, or another auditor committee member so delegated, is authorized to approve the service after discussion with the auditor and management. Services so approved are reported to the full committee at the next scheduled meeting for ratification by the full committee.

The auditor must ensure that all services provided by the auditor's firm, throughout the world, are appropriately pre-approved by the audit committee.

41

The committee is informed routinely as to the services performed pursuant to the pre-approval process.

OFF-BALANCE SHEET ARRANGEMENTS.

The registrant has no off-balance sheet arrangements.

TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS.

The required disclosure is included on page 69 of the registrant's Management's Discussion and Analysis of Financial Condition and Results of Operations for the fiscal year ended December 31, 2003, included in this Annual Report on Form 40-F.

IDENTIFICATION OF THE AUDIT COMMITTEE.

The registrant has a separately-designated standing audit committee established in accordance with section 3(a)(58)(A) of the Exchange Act. The members of the audit committee are: Robert J.S. Gibson, Patrick M. Murray and H. Garth Wiggins.

DISCLOSURE PURSUANT TO THE REQUIREMENTS OF THE NEW YORK STOCK EXCHANGE

LEAD DIRECTOR AT MEETINGS OF NON-MANAGEMENT DIRECTORS

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

The registrant schedules regular executive sessions in which the registrant's "non-management directors" (as that term is defined in the rules of the New York Stock Exchange) meet without management participation. The Board of Directors of the registrant appoint a lead director (the "Lead Director") from the independent and unrelated Directors present at each regularly held in-camera session of the Board of Directors. The Lead Director is responsible for developing the agenda for, and presiding over, in-camera sessions and acting as principal liaison between the non-management Directors and the Chief Executive Officer on matters dealt with during the in-camera session. Each of the registrant's non-management directors is "unrelated" as such term is used in the rules of the Toronto Stock Exchange

CATEGORICAL STANDARDS OF DIRECTOR INDEPENDENCE

The registrant's Board of Directors has adopted categorical standards for director independence. These categorical standards are attached hereto as Exhibit 99.6.

COMMUNICATION WITH NON-MANAGEMENT DIRECTORS

Shareholders may send communications to the registrant's non-management directors by writing to the Lead Director, c/o Jan Campbell, Corporate Secretary, Precision Drilling Corporation, 4200, 150 - 6th Avenue S.W., Calgary, Alberta, Canada, T2P 3Y7. Communications will be referred to the Lead Director for appropriate action. The status of all outstanding concerns addressed to the Lead Director will be reported to the board of directors as appropriate.

42

CORPORATE GOVERNANCE GUIDELINES

According to NYSE Rule 303A.09, a listed company must adopt and disclose a set of corporate governance guidelines with respect to specified topics. Such guidelines are required to be posted on the listed company's website. The registrant has adopted the required guidelines and has posted them on its website at www.precisiondrilling.com.

BOARD COMMITTEE MANDATES

The Mandates of the registrant's audit committee, and compensation committee, and corporate governance and nominating committee are each available for viewing on the registrant's website at www.precisiondrilling.com, and are available in print to any shareholder who requests them. Requests for copies of these documents should be made by contacting: Jan Campbell, Corporate Secretary, Precision Drilling Corporation, 4800, 150-6th Avenue S.W., Calgary, Alberta, Canada T2P 3Y7.

43

UNDERTAKING AND CONSENT TO SERVICE OF PROCESS

A. UNDERTAKING.

The registrant undertakes to make available, in person or by telephone, representatives to respond to inquiries made by the Securities and Exchange Commission (the "Commission") staff, and to furnish promptly, when requested to do so by the Commission staff, information relating to: the securities registered pursuant to Form 40-F; the securities in relation to which the

Edgar Filing: PRECISION DRILLING CORP - Form 40-F

obligation to file an annual report on Form 40-F arises; or transactions in said securities.

B. CONSENT TO SERVICE OF PROCESS.

The Company has previously filed a Form F-X in connection with the class of securities in relation to which the obligation to file this report arises.

Any change to the name or address of the agent for service of process of the registrant shall be communicated promptly to the Securities and Exchange Commission by an amendment to the Form F-X referencing the file number of the relevant registration statement.

SIGNATURES

Pursuant to the requirements of the Exchange Act, the registrant certifies that it meets all of the requirements for filing on Form 40-F and has duly caused this annual report to be signed on its behalf by the undersigned, thereunto duly authorized, on April 26, 2004.
