Development Relationship

mPhase executes reseller agreement with Lucent Technologies

NORWALK, Conn.--(BUSINESS WIRE)--May 8, 2003--mPhase Technologies, Inc. (OTC BB: XDSL), a leading supplier of solutions for the delivery of broadcast digital television and high-speed data over copper wires, announced it has cemented its ongoing business relationship with Lucent by signing a Reseller Agreement that allows mPhase to bundle Lucent's Stinger(R) DSL Access Concentrator into mPhase's leading-edge television-over-DSL package.

With this agreement, mPhase also becomes a Lucent Global Business Partner, with access to the many benefits associated with being a part of the Lucent Global Business Partner program. mPhase customers can now purchase Lucent's industry-leading Stinger(R) DSL Access Concentrator and mPhase's Broadcast Television Switch (BTS) and digital set-top box from a single source.

"This reseller agreement expands the relationship mPhase has enjoyed with Lucent and is the next logical step from our recently announced product development relationship with Lucent's Bell Labs," said Ronald Durando, president and CEO of mPhase.

mPhase announced earlier this year that it was teaming with Lucent to create a hybrid, best-in-class broadband platform to deliver converged services with a collaborative product combining mPhase's unique approach to the delivery of broadcast television over DSL with Lucent's industry-leading, high-density broadband platform, the Stinger(R) DSL Access Concentrator, resulting in a high quality-of-service hybrid solution with dramatic reductions in per-port expense.

"This combined product solution is highly efficient and ideal for developing markets where there is a lack of multichannel television options," stated Victor Lawrence, vice president, Advanced Communications Technology at Bell Labs.

Outside of the United States and pockets of Europe, the majority of television-owning households are not served with cable television. The emerging markets, particularly those in Eastern Europe, Middle East and Africa (EMEA), are areas of high growth for video over DSL. According to a report published in February 2003 by industry analysts the Gartner Group, "[the number of telephone companies in the EMEA region saying] they would offer video over DSL has leapt from 40 percent in 2001 to almost 75 percent in 2002. This is a clear sign that carriers [in this region] realize they need to move upstream with broadband value-added services."

"Uniting the strengths of mPhase and Lucent has resulted in a reliable, scaleable and cost-effective method of supporting television services over DSL," added Durando. "With the reseller agreement in place - and our new position as a Lucent Global Business Partner - mPhase has a total package and the resources available to bring this solution to players around the globe who want to make television-over-DSL a reality."

About mPhase Technologies, Inc.

mPhase Technologies Inc. develops solutions for cost-effectively and reliably transmitting broadcast digital television, high-speed Internet access and traditional telephone service over existing copper telephone lines. mPhase also offers a growing line of innovative DSL component
