# Assured Guaranty Ltd. Notes to Consolidated Financial Statements

June 30, 2009

(Unaudited)

#### 1. Business and Organization

Assured Guaranty Ltd. is a Bermuda-based holding company which provides, through its operating subsidiaries, credit enhancement products to the public finance, structured finance and mortgage markets (together with its subsidiaries, the Company). Credit enhancement products are financial guarantees or other types of support, including credit derivatives, which improve the credit of underlying debt obligations. The Company issues policies in both financial guaranty and credit derivative form. Assured Guaranty Ltd. applies its credit expertise, risk management skills and capital markets experience to develop insurance, reinsurance and derivative products that meet the credit enhancement needs of its customers. Under a reinsurance agreement, the reinsurer, in consideration of a premium paid to it, agrees to indemnify another insurer, called the ceding company, for part or all of the liability of the ceding company under one or more insurance policies that the ceding company has issued. A derivative is a financial instrument whose characteristics and value depend upon the characteristics and value of an underlying security. Assured Guaranty Ltd. markets its products directly to and through financial institutions, serving the U.S. and international markets. Assured Guaranty Ltd. s financial results include four principal business segments: financial guaranty direct, financial guaranty reinsurance, mortgage guaranty and other. These segments are further discussed in Note 14.

Financial guaranty insurance provides an unconditional and irrevocable guaranty that protects the holder of a financial obligation against non-payment of principal and interest when due. Financial guaranty insurance may be issued to the holders of the insured obligations at the time of issuance of those obligations, or may be issued in the secondary market to holders of public bonds and structured securities. A loss event occurs upon existing or anticipated credit deterioration, while a payment under a policy occurs when the insured obligation defaults. This requires the Company to pay the required principal and interest when due in accordance with the underlying contract. The principal types of obligations covered by the Company s financial guaranty direct and financial guaranty assumed reinsurance businesses are structured finance obligations and public finance obligations. Because both businesses involve similar risks, the Company analyzes and monitors its financial guaranty direct portfolio and financial guaranty assumed reinsurance portfolio on a unified process and procedure basis.

Mortgage guaranty insurance is a specialized class of credit insurance that provides protection to mortgage lending institutions against the default of borrowers on mortgage loans that, at the time of the advance, had a loan to value in excess of a specified ratio. Reinsurance in the mortgage guaranty insurance industry is used to increase the insurance capacity of the ceding company, to assist the ceding company in meeting applicable regulatory and rating agency requirements, to augment the financial strength of the ceding company, and to manage the ceding company s risk profile. The Company provides mortgage guaranty protection on an excess of loss basis.

The Company has participated in several lines of business that are reflected in its historical financial statements but that the Company exited in connection with its 2004 initial public offering ( IPO ). The results from these lines of business make up the Company s Other segment discussed in Note 14.

#### Table of Contents

The Company s subsidiaries have been assigned the following insurance financial strength ratings as of the date ofhis filling. These ratings are subject to continuous review:

|   | Moody s        | S&P                   | Fitch            |
|---|----------------|-----------------------|------------------|

| Financial Security Assurance (U.K.) Ltd         | Aa3(Excellent) | AAA(Extremely Strong) | AA+(Very Strong) |

On May 4, 2009, Fitch Inc. (Fitch) downgraded the debt and insurer financial strength ratings of Assured Guaranty Ltd. and its subsidiaries, as applicable, based on Fitch s concerns that Assured Guaranty Ltd. continued to face negative credit migration within the combined insured portfolio, primarily related to structured finance, outpacing its ability to build capital resources through earnings retention. It cited mortgage-related exposures as a particular area of concern, as well as exposures to trust preferred securities collateralized debt obligations ( TruPS CDOs ) and other structured finance transactions which have been subject to ratings downgrades. Fitch downgraded the insurer financial stronger ratings of AGC and AG(UK) to AA from AAA , downgraded the insurer financial strength ratings of AG Re, AGRO and Assured Guaranty Mortgage Insurance Company to AA- from AA and the debt ratings of Assured Guaranty US Holdings Inc. ( AGUS ). All such ratings were placed on Rating Watch Evolving. On May 11, 2009, Fitch downgraded the insurer financial strength relating of FSA and certain other affiliates to AA+ from AAA and the long term rating of Financial Security Assurance Holding Ltd. (FSAH) to A+ from AA. All such rating remain on Rating Watch Negative. Fitch cited as the primary reason for this action Fitch s view of the residual risks retained by FSA following the transfer of its financial products business to Dexia S.A. (Dexia), which transfer is described in greater detail below. On August 10, 2009. Fitch placed the debt and insurer financial strength ratings of the Company and its subsidiaries on Rating Watch Negative, a change from Rating Watch Evolving. It confirmed that the ratings of FSAH and its subsidiaries remained on Rating Watch Negative. Fitch reported that it is currently in the process of analyzing the insured portfolios and overall capital adequacy of AGC, AG Re and FSA, and that the Rating Watch Negative reflects concerns with respect to further credit deterioration in mortgage-related exposures, which could negatively impact the capital positions of the companies. It noted that credit deterioration in other areas of the insured portfolios, including TruPS CDOs and public finance exposures, could also place additional pressure on claims paying resources, as could ratings-based triggers which could force termination or collateralization of insured exposures at AGC or the claw-back of certain businesses underwritten by AG Re. Fitch notes that it expects to complete its rating review over the next four to six weeks. There is no assurance that Fitch will not take further action on our ratings.

On May 20, 2009, Moody s Investors Service (Moody s) placed under review for possible downgrade the Aa2 insurance financial strength rating of AGC, as well as the ratings of other entities within the Assured group. In its public announcement of the rating action, Moody's stated that this action reflects its view that despite recent improvements in the Company s market position, the expected performance of its insured portfolio particularly the mortgage-related risks has substantially worsened. At the same time, Moody s also placed the Aa3 insurance financial strength ratings of FSA and its affiliated insurance operating companies on review for possible downgrade. In its public announcement of the rating action, Moody s cited its growing concerns about FSA s business and financial profile as a result of further deterioration in FSA s U.S. mortgage portfolio and the related adverse effect on its capital adequacy, profitability, and market traction. In both press releases, Moody s noted that it has taken a more negative view of mortgage-related exposures and Assured Guaranty Ltd. s pooled corporate exposures in light of worse-than-expected performance trends, and recognized the continued susceptibility of the insured portfolio to the weak economic environment. Moody s also commented that the deterioration in the insured portfolios could have negative implications for the companies franchise values, profitability and financial flexibility given the likely sensitivity of those business attributes to its capital position. Moody s also noted that the market dislocation caused by the declining financial strength of financial guaranty insurers may alter the competitive dynamics of the industry by encouraging the entry of new participants or the growth of alternative forms of execution. There can be no assurance as to the outcome of Moody's review. Moody's did note on June 17, 2009, in respect of the securities of AGUS, that in light of the high sensitivity of the Company s financial profile to RMBS and CDOs, meaningful increases in Moody s stress loss estimates for these exposures, which are possible, combined with the subordination of the AGUS securities, could result in a multiple-notch downgrade of the AGUS securities, perhaps below

investment grade. On July 24, 2009, Moody s announced that it expects to conclude its ratings review of the companies by mid-August 2009.

On July 1, 2009, Standard & Poor s, a division of The McGraw-Hill Companies, Inc. (S&Put)lished a Research Update in which it affirmed its AAA counterparty credit and financial strength ratings on AGC and FSA. At the same time, S&P revised its outlook on AGC and AG(UK) to negative from stable and continued its negative outlook on FSA. S&P cited as a rationale for its actions the large single risk concentration exposure that Assured Guaranty Ltd. and FSA retain to Belgium and France prior to the posting of collateral by Dexia in October 2011, all in connection with the acquisition of FSAH by a subsidiary of Assured Guaranty Ltd., which

#### Table of Contents

acquisition is described in greater detail below. In addition, the outlook also reflects S&P s view that the change in the competitive dynamics of the industry—with the potential entrance of new competitors, alternative forms of credit enhancement and limited insurance penetration in the U.S. public finance market—could hurt the companies—business prospects. There can be no assurance that S&P will not take further action on our ratings.

#### Acquisition of Financial Security Assurance Holdings Ltd.

On July 1, 2009, the Company, through its fully-owned subsidiary, AGUS, purchased FSAH and, indirectly, all of its subsidiaries other than those involved in its financial products business, including its principal operating subsidiary, the financial guaranty insurance company Financial Security Assurance, Inc. from Dexia Holdings, Inc. ( Dexia Holdings ), which is a subsidiary of Dexia. The former FSAH subsidiaries that were involved in the financial products business were transferred to Dexia at closing and the Company is indemnified, through guarantees issued by Dexia and affiliated entities and the French and Belgian governments, against exposure to FSAH s financial products segment, which includes its guaranteed investment contract business, medium term note business and leveraged tax lease business.

The purchase price paid by the Company was approximately \$546 million in cash and approximately 22.3 million common shares of the Company for a total purchase price of approximately \$822 million. The issuance of these 22.3 million common shares is in addition to the common shares issued by the Company on June 24, 2009 as discussed below. Dexia Holdings owns approximately 14.0% of Assured Guaranty Ltd. s issued common shares as a result of this transaction. Dexia Holdings has agreed that the voting rights with respect to all Assured Guaranty Ltd. s common shares issued pursuant to the Purchase Agreement will constitute less than 9.5% of the voting power of all issued and outstanding Assured Guaranty Ltd. s common shares. Dexia Holdings has also agreed to a standstill arrangement until the date on which it and its affiliates beneficially own Assured Guaranty Ltd. s common shares in an amount less than 10% of the outstanding Assured Guaranty Ltd. s common shares. In addition, Dexia Holdings has agreed that, until November 14, 2009, the first anniversary of the date of the Purchase Agreement, it will not transfer any of the Assured Guaranty Ltd. s common shares issued pursuant to the Purchase Agreement without the consent of the Company, other than to one or more of its affiliates that agrees to abide by the voting and other restrictions described above.

The Company financed the cash portion of the acquisition with the proceeds of the public equity offering discussed below.

#### **Common Share and Equity Units Offerings**

On June 24, 2009, the Company completed the sale of 44,275,000 of its common shares (including 5,775,000 common shares allocable to the underwriters pursuant to the overallotment option) at a price of \$11.00 per share. Concurrent with the common share offering, the Company along with AGUS sold 3,450,000 equity units (including 450,000 equity units allocable to the underwriters) at a stated amount of \$50 per unit. The equity units initially consist of a forward purchase contract and a 5% undivided beneficial ownership interest in \$1,000 principal amount 8.50% senior notes due 2014 issued by AGUS ( 8.50% Senior Notes ). Under the purchase contract, holders are required to purchase the Company s common shares no later than June 1, 2012. The threshold appreciation price of the equity units is \$12.93, which represents a premium of 17.5% over the public offering price in the common share offering. The 8.50% Senior Notes are fully and unconditionally guaranteed by Assured Guaranty Ltd. The net proceeds after underwriting expenses and offering costs for these two offerings totaled approximately \$616.5 million. Of that amount, the net proceeds from the equity offering were \$170.8 million, which was allocated between \$168.0 million recognized as long-term debt and \$2.8 million of the purchase contract recognized in additional paid-in-capital in shareholders equity in the consolidated balance sheets.

In conjunction with the acquisition, the Company entered into an Amendment to the Investment Agreement dated as of November 13, 2008 with investment funds affiliated with WL Ross Group, L.P. ( WLR Funds ), which amended the Investment Agreement (the Investment Agreement ) dated as of February 28, 2008 between the Company and WLR Funds, which provided a back up funding commitment to finance the acquisition. Pursuant to pre-emptive rights set forth in the Investment Agreement, WLR Funds, which are affiliated with Wilbur L. Ross, Jr., who is one of the Company s directors, purchased 3,850,000 common shares of the

#### Table of Contents

Company in the Company s June 2009 public common share offering at \$11.00 per common share, the public offering price in the public offering. As of the date of this filing the WLR Funds own approximately 10.2% of the outstanding common stock of the Company.

#### 2. Basis of Presentation

The unaudited interim consolidated financial statements, which include the accounts of the Company, have been prepared in conformity with accounting principles generally accepted in the United States of America (GAAP) and, in the opinion of management, reflect all adjustments, which are of a normal recurring nature, necessary for a fair statement of the Company's financial condition, results of operations and cash flows for the periods presented. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. These unaudited interim consolidated financial statements cover the three-month period ended June 30, 2009 (Second Quarter 2009), the three-month period ended June 30, 2008 (Second Quarter 2008), the six-month period ended June 30, 2009 (Six Months 2009) and the six-month period ended June 30, 2008 (Six Months 2008). Operating results for the three- and six-month periods ended June 30, 2009 are not necessarily indicative of the results that may be expected for a full year. These financial statements include the effects of the Company's common share and equity units offering that took place on June 24, 2009 but do not include the effects of the acquisition of FSAH, which occurred effective July 1, 2009. The Company's financial statements as of September 30, 2009 will include the effects of the FSAH acquisition, including three months of operating results attributable to FSAH entities.

Certain prior year items have been reclassified to conform to the current year presentation. These unaudited interim consolidated financial statements should be read in conjunction with the Company s consolidated financial statements included in the Company s Annual Report on Form 10-K for the year ended December 31, 2008, filed with the Securities and Exchange Commission. All intercompany accounts and transactions have been eliminated. The Company has evaluated all subsequent events through August 10, 2009, the date the financial statements were issued.

Certain of the Company s subsidiaries are subject to U.S. and U.K. income tax. The provision for income taxes is calculated in accordance with Statement of Financial Accounting Standards (FAS) No. 109, Accounting for Income Taxes. The Company s provision for income taxes for interim financial periods is not based on an estimated annual effective rate due to the variability in changes in fair value of its credit derivatives, which prevents the Company from projecting a reliable estimated annual effective tax rate and pre-tax income for the full year of 2009. A discrete calculation of the provision is calculated for each interim period.

Volatility and disruption in the global financial markets including depressed home prices and increasing foreclosures, falling equity market values, rising unemployment, declining business and consumer confidence and the risk of increased inflation, have precipitated an economic slowdown. The conditions may adversely affect the Company s future profitability, financial position, investment portfolio, cash flow, statutory capital, financial strength ratings and stock price. Additionally, future legislative, regulatory or judicial changes in the jurisdictions regulating the Company may adversely affect its ability to pursue its current mix of business, materially impacting its financial results.

Adoption of FAS 163

Effective January 1, 2009, the Company adopted Statement of Financial Accounting Standards No. 163, Accounting for Financial Guarantee Insurance Contracts (FAS 163). FAS 163 requires that an insurance enterprise recognize a claim liability prior to an event of default (insured event) when there is evidence that credit deterioration has occurred in an insured financial obligation. FAS 163 also clarifies the methodology to be used for financial guaranty premium revenue recognition and claim liability measurement, as well as requiring expanded disclosures about the insurance enterprise s risk management activitiesFAS 163 has been applied to all existing and future financial guaranty insurance contracts written by the Company.

#### Table of Contents

The accounting changes prescribed by the statement were recognized by the Company as a cumulative effect adjustment to retained earnings as of January 1, 2009.

#### Premium Revenue Recognition

Premiums are received either upfront or in installments.

#### Upon Adoption of FAS 163

The Company recognizes a liability for the unearned premium revenue at the inception of a financial guarantee contract equal to the present value of the premiums due or expected to be collected over the period of the contract. If the premium is a single premium received at the inception of the financial guarantee contract, the Company measures the unearned premium revenue as the amount received. The period of the contract is the expected period of risk that generally equates to the contract period. However, in some instances, the expected period of risk is significantly shorter than the full contract period due to expected prepayments. In those instances where the financial guarantee contract insures a homogeneous pool of assets that are contractually prepayable and where those prepayments are probable and the timing and amount of prepayments can be reasonably estimated the Company uses the expected period of risk to recognize premium revenues. The Company adjusts prepayment assumptions when those assumptions change and recognizes a prospective change in premium revenues as a result. The adjustment to the unearned premium revenue is equal the adjustment to the premium receivable with no effect on earnings at the time of the adjustment.

The Company recognizes the premium from a financial guarantee insurance contract as revenue over the period of the contract in proportion to the amount of insurance protection provided. As premium revenue is recognized, a corresponding decrease in the unearned premium revenue occurs. The amount of insurance protection provided is a function of the insured principal amount outstanding. Therefore, the proportionate share of premium revenue to be recognized in a given reporting period is a constant rate calculated based on the relationship between the insured principal amount outstanding in a given reporting period compared with the sum of each of the insured principal amounts outstanding for all periods. When the issuer of an insured financial obligation retires the insured financial obligation before its maturity and replaces it with a new financial obligation, referred to as a refunding, the financial guarantee insurance contract on the retired financial obligation is extinguished. The Company immediately recognizes any nonrefundable unearned premium revenue related to that contract as premium revenue and any associated acquisition costs previously deferred as an expense.

The following table provides information for financial guaranty insurance contracts where premiums are received on an installment basis as of and for the six months ended June 30, 2009 (dollars in thousands):

| Premiums receivable, net of ceding commissions (end of period)(1) | \$<br>732,504 |
|---|---------------|
| Unearned premium reserves (end of period)(2)                      | \$<br>933,771 |
| Accretion of discount on premium receivable                       | \$<br>10,812  |
| Weighted-average risk-free rate to discount premiums              | 2.7%          |
| Weighted-average period of premiums receivable (in years)         | 10.4          |

- (1) Includes \$94.8 million of ceding commissions due on future installment premium receivable.
- (2) Includes unearned premium related to the upfront portion of premiums received on bi-furcated deals.

#### Table of Contents

The premiums receivable expected to be collected are:

| (dollars in thousands)                               |               |
|--|---------------|
| 2009 (July 1 September 30)                           | \$<br>36,605  |
| 2009 (October 1 December 31)                         | 17,546        |
| 2010 (January 1 March 31)                            | 17,512        |
| 2010 (April 1 June 30)                               | 15,181        |
| 2010 (July 1 December 31)                            | 27,635        |
| 2011   | 50,112        |
| 2012   | 47,845        |
| 2013   | 41,259        |
| 2014 - 2018  | 164,027       |
| 2019 - 2023  | 119,010       |
| 2024 - 2028  | 93,285        |
| 2029 - 2033  | 73,087        |
| 2034 - 2038  | 32,754        |
| 2039 - 2043  | 12,577        |
| 2044 - 2048  | 3,970         |
| 2049 - 2053  | 460           |
| 2054 - 2056  | 27            |
| Total premiums receivable, net of ceding commissions | \$<br>752,892 |

The following table provides a reconciliation of the beginning and ending balances of premium receivable:

| (dollars in thousands)                        |               |
|---|---------------|
| Balance as of January 1, 2009                 | \$<br>737,181 |
| Add: premiums written - net                   | 376,799       |
| Add: accretion of premium receivable discount | 10,812        |
| Less: premium payments received               | (371,900)     |
| Balance as of June 30, 2009                   | \$<br>752,892 |

The accretion of premium receivable discount is included in earned premium in the Company s statement of operations. The above amounts are presented net of applicable ceding commissions.

The future expected financial guarantee premium revenue that the Company expects to recognize are:

| (dollars in thousands)       |              |
|------------------------------|--------------|
| 2009 (July 1 September 30)   | \$<br>49,750 |
| 2009 (October 1 December 31) | 48,713       |
| 2010 (January 1 March 31)    | 45,654       |
| 2010 (April 1 June 30)       | 46,001       |
| 2010 (July 1 December 31)    | 88,639       |
| 2011                         | 165,333      |
| 2012                         | 150,753      |

| 2013  | 136,441         |
|---|-----------------|
| 2014 - 2018   | 538,190         |
| 2019 - 2023   | 374,382         |
| 2024 - 2028   | 260,215         |
| After 2028  | 305,678         |
| Total future expected financial guarantee premium revenue | \$<br>2,209,749 |

#### **Table of Contents**

In the Company s reinsurance businesses, the Company estimates the ultimate written and earned premiums to be received from a ceding company at the end of each quarter and the end of each year because some of the Company s ceding companies report premium data anywhere from 30 to 90 days after the end of the relevant period. Written premiums reported in the Company s statement of operations are based upon reports received from ceding companies supplemented by the Company s own estimates of premium for which ceding company reports have not yet been received. Differences between such estimates and actual amounts are recorded in the period in which the actual amounts are determined.

#### Prior to Adoption of FAS 163

Prior to January 1, 2009, upfront premiums were earned in proportion to the expiration of the amount at risk. Each installment premium was earned ratably over its installment period, generally one year or less. Premium earnings under both the upfront and installment revenue recognition methods were based upon and were in proportion to the principal amount guaranteed and therefore resulted in higher premium earnings during periods where guaranteed principal was higher. For insured bonds for which the par value outstanding was declining during the insurance period, upfront premium earnings were greater in the earlier periods thus matching revenue recognition with the underlying risk. The premiums were allocated in accordance with the principal amortization schedule of the related bond issue and were earned ratably over the amortization period. When an insured issue was retired early, was called by the issuer, or was in substance paid in advance through a refunding accomplished by placing U.S. Government securities in escrow, the remaining unearned premium reserves were earned at that time. Unearned premium reserves represented the portion of premiums written that were applicable to the unexpired amount at risk of insured bonds.

#### **Deferred Acquisition Costs**

Acquisition costs incurred, other than those associated with financial guarantees written in credit derivative form, that vary with and are directly related to the production of new business are deferred in proportion to written premium and amortized in relation to earned premiums. These costs include direct and indirect expenses such as ceding commissions, brokerage expenses and the cost of underwriting and marketing personnel. Management uses its judgment in determining what types of costs should be deferred, as well as what percentage of these costs should be deferred. The Company annually conducts a study to determine which operating costs vary with, and are directly related to, the acquisition of new business and qualify for deferral. Ceding commissions received on premiums the Company cedes to other reinsurers reduce acquisition costs. Anticipated losses, loss adjustment expenses and the remaining costs of servicing the insured or reinsured business are considered in determining the recoverability of acquisition costs. Acquisition costs associated with credit derivative products are expensed as incurred. When an insured issue is retired early, as discussed above in the Premium Revenue Recognition section, the remaining related deferred acquisition cost is expensed at that time. Ceding commissions, calculated at their contractually defined rate, associated with future installment premiums on assumed and ceded reinsurance business were recorded in deferred acquisition costs upon the adoption of FAS 163 with a corresponding offset to premium receivable.

#### Reserves for Losses and Loss Adjustment Expenses

The Company s financial guarantees written in credit derivative form have substantially the same terms and conditions in respect of the obligation to make payments upon the failure of an obligor to pay as its financial guaranty contracts written in insurance form. Under GAAP, however, the former are subject to derivative accounting rules and the latter are subject to insurance accounting rules.

Financial Guaranty Contracts Upon Adoption of FAS 163

The Company recognizes a reserve for losses and loss adjustment expenses on a financial guarantee insurance contract when the Company expects that a claim loss will exceed the unearned premium revenue for that contract based on the present value of expected net cash outflows to be paid under the insurance contract. The unearned premium revenue represents the insurance enterprise s stand-ready obligation under a financial guarantee insurance contract at initial recognition. Subsequently, if the likelihood of a default (insured event) increases so that the present value of the expected net cash outflows expected to be paid under the insurance contract exceeds the

#### Table of Contents

unearned premium revenue, the Company recognizes a reserve for losses and loss adjustment expenses in addition to the unearned premium revenue.

A reserve for losses is equal to the present value of expected net cash outflows to be paid under the insurance contract discounted using a current risk-free rate. That current risk-free rate is based on the remaining period (contract or expected, as applicable) of the insurance contract. Expected net cash outflows (cash outflows, net of potential recoveries, expected to be paid to the holder of the insured financial obligation, excluding reinsurance) are probability-weighted cash flows that reflect the likelihood of possible outcomes. The Company estimates the expected net cash outflows using the internal assumptions about the likelihood of possible outcomes based on all information available. Those assumptions consider all relevant facts and circumstances and are consistent with the information tracked and monitored through the Company s risk-management activities.

The Company updates the discount rate each reporting period and revises expected net cash outflows when increases (or decreases) in the likelihood of a default (insured event) and potential recoveries occur. The discount amount is accreted on the reserve for losses and loss adjustment expenses through earnings in incurred loss and loss adjustment expenses (recoveries). Revisions to a reserve for loss and loss adjustment expenses in periods after initial recognition are recognized as incurred loss and loss adjustment expenses (recoveries) in the period of the change.

#### Financial Guaranty Contracts Prior to Adoption of FAS 163

Prior to January 1, 2009, reserves for losses for non-derivative transactions in the Company s financial guaranty direct and financial guaranty assumed reinsurance included case reserves and portfolio reserves. Case reserves were established when there was significant credit deterioration on specific insured obligations and the obligations were in default or default was probable, not necessarily upon non-payment of principal or interest by an insured. Case reserves represented the present value of expected future loss payments and loss adjustment expenses, net of estimated recoveries, but before considering ceded reinsurance. This reserving method was different from case reserves established by traditional property and casualty insurance companies, which establish case reserves upon notification of a claim and establish incurred but not reported reserves ( IBNR ) for the difference between actuarially estimated ultimate losses and recorded case reserves. Financial guaranty insurance and assumed reinsurance case reserves and related salvage and subrogation, if any, were discounted at the taxable equivalent yield on the Company s investment portfolio, which was approximately 6%, during 2008.

The Company recorded portfolio reserves in its financial guaranty direct and financial guaranty assumed reinsurance business. Portfolio reserves were established with respect to the portion of the Company s business for which case reserves were not established.

Portfolio reserves were not established based on a specific event, rather they were calculated by aggregating the portfolio reserve calculated for each individual transaction. Individual transaction reserves were calculated on a quarterly basis by multiplying the par in-force by the product of the ultimate loss and earning factors without regard to discounting. The ultimate loss factor was defined as the frequency of loss multiplied by the severity of loss, where the frequency was defined as the probability of default for each individual issue. The earning factor was inception to date earned premium divided by the estimated ultimate written premium for each transaction. The probability of default was estimated from rating agency data and was based on the transaction s credit rating, industry sector and time until maturity. The severity was defined as the complement of recovery/salvage rates gathered by the rating agencies of defaulting issues and was based on the industry sector.

Portfolio reserves were recorded gross of reinsurance. The Company did not cede any amounts under these reinsurance contracts, as the Company s recorded portfolio reserves did not exceed the Company s contractual retentions, required by said contracts.

The Company recorded an incurred loss that was reflected in the statement of operations upon the establishment of portfolio reserves. When the Company initially recorded a case reserve, the Company reclassified the corresponding portfolio reserve already recorded for that credit within the balance sheet. The difference between the initially recorded case reserve and the reclassified portfolio reserve was recorded as a charge in the Company s

#### Table of Contents

statement of operations. Any subsequent change in portfolio reserves or the initial case reserves were recorded quarterly as a charge or credit in the Company s statement of operations in the period such estimates changed.

#### Mortgage Guaranty and Other Lines of Business

Mortgage guaranty and other lines of business are not in the scope of FAS 163. Reserves for losses and loss adjustment expenses in the Company's mortgage guaranty line of business include case reserves and portfolio reserves. Case reserves are established when there is significant credit deterioration on specific insured obligations and the obligations are in default or default is probable, not necessarily upon non-payment of principal or interest by an insured. Case reserves represent the present value of expected future loss payments and loss adjustment expenses (LAE), net of estimated recoveries, but before considering ceded reinsurance. This reserving method is different from case reserves established by traditional property and casualty insurance companies, which establish case reserves upon notification of a claim and establish IBNR reserves for the difference between actuarially estimated ultimate losses and recorded case reserves.

The Company also records portfolio reserves for mortgage guaranty line of business in a manner consistent with its financial guaranty business prior to the adoption of FAS 163. While other mortgage guaranty insurance companies do not record portfolio reserves, rather just case and IBNR reserves, the Company records portfolio reserves because the Company writes business on an excess of loss basis, while other industry participants write quota share or first layer loss business. The Company manages and underwrites this business in the same manner as its financial guaranty insurance and reinsurance business because management believes they have similar characteristics as insured obligations of mortgage backed securities.

The Company also records IBNR reserves for its other line of business. IBNR is an estimate of losses for which the insured event has occurred but the claim has not yet been reported to the Company. In establishing IBNR, the Company uses traditional actuarial methods to estimate the reporting lag of such claims based on historical experience, claim reviews and information reported by ceding companies. The Company records IBNR for trade credit reinsurance within its other segment, which is 100% reinsured. The other segment represents lines of business that the Company exited or sold as part of the Company s IPO.

Due to the inherent uncertainties of estimating loss and LAE reserves, actual experience may differ from the estimates reflected in the Company s consolidated financial statements, and the differences may be material.

#### Reinsurance

In the ordinary course of business, the Company s insurance subsidiaries assume and retrocede business with other insurance and reinsurance companies. These agreements provide greater diversification of business and may reduce the net potential loss from large risks. Retrocessional contracts do not relieve the Company of its obligation to the reinsured. Reinsurance recoverable on ceded losses includes balances due from reinsurance companies for paid and unpaid losses and LAE that will be recovered from reinsurers, based on contracts in force, and is presented net of any provision for estimated uncollectible reinsurance. Any change in the provision for uncollectible reinsurance is included in loss and loss adjustment expenses. Prepaid reinsurance premiums represent the portion of premiums ceded to reinsurers relating to the unexpired terms of the reinsurance contracts in force.

Certain of the Company s assumed and ceded reinsurance contracts are funds held arrangements. In a funds held arrangement, the ceding company retains the premiums instead of paying them to the reinsurer and losses are offset against these funds in an experience account. Because the reinsurer is not in receipt of the funds, the reinsurer earns interest on the experience account balance at a predetermined credited rate of interest. The Company generally earns interest at fixed rates of between 4% and 6% on its assumed funds held arrangements and generally pays interest at fixed rates of between 4% and 6% on its ceded funds held arrangements. The interest earned or credited on funds held arrangements is included in net investment income. In addition, interest on funds held arrangements will continue to be earned or credited until the experience account is fully depleted, which can extend many years beyond the expiration of the coverage period.

Table of Contents

#### Salvage Recoverable

When the Company becomes entitled to the underlying collateral (generally a future stream of cash flows or pool assets) of an insured credit under salvage and subrogation rights as a result of a claim payment or estimates recoveries from disputed claim payments on contractual grounds, it reduces the corresponding loss reserve for a particular financial guaranty insurance policy for the estimated salvage and subrogation, in accordance with FAS No. 60, Accounting and Reporting by Insurance Enterprises. If the expected salvage and subrogation exceeds the estimated loss reserve for a policy, such amounts are recorded as a salvage recoverable asset in the Company's balances sheets.

#### Goodwill

In connection with FAS No. 142, Goodwill and Other Intangible Assets, the Company does not amortize goodwill, but instead is required to perform an impairment test annually or more frequently should circumstances warrant. The impairment test evaluates goodwill for recoverability by comparing the fair value of the Company s direct and reinsurance lines of business to their carrying value. If fair value is greater than carrying value then goodwill is deemed to be recoverable and there is no impairment. If fair value is less than carrying value then goodwill is deemed to be impaired and written down an amount such that the fair value of the reporting unit is equal to the carrying value, but not less than \$0. No such impairment to goodwill was recognized in the year ended December 31, 2008.

As part of the impairment test of goodwill, there are inherent assumptions and estimates used by management in developing discounted future cash flows related to our direct and reinsurance lines of business that are subject to change based on future events. Management s estimates include projecting earned premium, incurred losses, expenses, interest rates, cost of capital and tax rates. Many of the factors used in assessing fair value are outside the control of management and it is reasonably likely that assumptions and estimates will change in future periods. These changes can result in future impairments.

The Company has concluded that it is reasonably likely that the goodwill associated with our reinsurance line of business could become impaired in future periods if the volume of new business in the financial guaranty reinsurance market does not return to levels experienced in prior years or if the Company is not able to continue to execute portfolio based reinsurance contracts on blocks of business for other financial guarantors in financial distress. The FSAH transaction, completed on July 1, 2009, will cause management to reassess its goodwill amounts related to its reinsurance line of business during the Third Quarter 2009 due to its impact on the volume of third party reinsurance business that the Company is expected to assume going forward. If management determines in a future reporting period that goodwill is impaired, the Company would recognize a non-cash impairment charge in its statement of operations and comprehensive income in an amount up to \$85.4 million, the current carrying value of goodwill. This charge would not have any adverse effect on the Company s debt agreements or its overall compliance with the covenants of its debt agreements.

#### 3. Recent Accounting Pronouncements

In December 2007, the FASB issued FAS No. 141 (revised), Business Combinations (FAS 141R). FAS 141R establishes principles and requirements for how the acquirer of a business recognizes and measures in its financial statements the identifiable assets acquired, the liabilities assumed, and any noncontrolling interest in the acquiree. FAS 141R also provides guidance for recognizing and measuring the goodwill acquired in the business combination and determines what information to disclose to enable users of the financial statement to evaluate the

nature and financial effects of the business combination. FAS 141R is effective for financial statements issued for fiscal years beginning after December 15, 2008, and interim statements within those fiscal years. Since FAS 141R applies prospectively to business combinations whose acquisition date is subsequent to the statement statement adoption. The Company is applying the provisions of FAS 141R to account for its acquisition of FSAH, which closed on July 1, 2009.

In October 2008, the FASB issued FASB Staff Position (FSP) No. FAS 157-3, Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active (FSP 157-3). FSP 157-3 clarified the

#### Table of Contents

application of FAS 157, Fair Value Measurements (FAS 157), in a market that is not active. FSP 157-3 was effective when issued. It did not have an impact on the Company s current results of operations or financial position.

In September 2008, the FASB issued FSP FAS 133-1 and FIN 45-4, Disclosures About Credit Derivatives and Certain Guarantees (FSP 133-1) and FAS 161, Disclosures about Derivative Instruments and Hedging Activities (FAS 161) to address concerns that current derivative disclosure requirements did not adequately address the potential adverse effects that these instruments can have on the financial performance and operations of an entity. Companies are required to provide enhanced disclosures about their derivative activities to enable users to better understand: (1) how and why a company uses derivatives, (2) how it accounts for derivatives and related hedged items, and (3) how derivatives affect its financial statements. These should include the terms of the derivatives, collateral posting requirements and triggers, and other significant provisions that could be detrimental to earnings or liquidity. Management believes that the Company s current derivatives disclosures are in compliance with the requirements of FSP 133-1 and FAS 161.

In April 2009, the FASB issued FSP FAS No. 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset or Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly (FSP 157-4). FSP 157-4 amends FAS 157 to provide additional guidance on estimating fair value when the volume and level of activity for an asset or liability have significantly decreased in relation to normal market activity for the asset or liability. FSP 157-4 also provides additional guidance on circumstances that may indicate that a transaction is not orderly. FSP 157-4 supersedes FSP 157-3. FSP 157-4 amends FAS 157 to require additional disclosures about fair value measurements in annual and interim reporting periods. The Company adopted FSP 157-4 effective with Company s financial statements for the quarter ended June 30, 2009. The prospective application of FSP 157-4 does not require disclosures for earlier periods presented for comparative purposes at initial adoption. FSP 157-4 did not have an impact on the Company s current results of operations or financial position. The disclosures related to FSP 157-4 are included in Note 5.

In April 2009, the FASB issued FSP No. FAS 107-1 and APB 28-1, Interim Disclosures about Fair Value of Financial Instruments (FSP 107-1). FSP 107-1 extends the disclosure requirements of FAS No. 107, Disclosures about Fair Value of Financial Instruments, to interim financial statements of publicly traded companies. The Company adopted FSP 107-1 effective with Company s financial statements for the quarter ended June 30, 2009. FSP 107-1 did not have an impact on the Company s current results of operations or financial position. The disclosures related to FSP 107-1 are included in Note 5.

In April 2009, the FASB issued FSP No. FAS 115-2 and FAS 124-2, Recognition and Presentation of Other-Than-Temporary Impairments (FSP 115-2). FSP 115-2 provides new guidance on the recognition and presentation of an other than temporary impairment (OTTI) for debt securities classified as available-for-sale and held-to-maturity and provides some new disclosure requirements for both debt and equity securities. FSP 115-2 mandates new disclosure requirements that affect both debt and equity securities and extend the disclosure requirements (both new and existing) to interim periods. The Company adopted FSP 115-2 effective with Company s financial statements for the quarter ended June 30, 2009 and increased the April 1, 2009 balance of retained earnings by \$62.2 million (\$57.7 million after tax) with a corresponding adjustment to accumulated other comprehensive income for OTTI recorded in previous periods on securities in the Company s portfolio at April 1, 2009, that would not have been required had the FSP been effective for those periods. See Note 6.

In May 2009, the FASB issued FAS No. 165, Subsequent Events (FAS 165). FAS 165 establishes general standards of accounting and disclosure for events that occur after the balance sheet date but before financial statements are issued. FAS 165 is effective for reporting periods ending after June 15, 2009. The Company adopted FAS 165 for the quarter ended June 30, 2009. FAS 165 did not have an impact on the Company's consolidated financial position or results of operations, as its requirements are disclosure-only in nature. See Note 2 for the related disclosures.

In June 2009, the FASB issued FAS No. 167, Amendments to FASB Interpretation No. 46(R) (FAS 167). FAS 167 changes how a company determines when an entity that is insufficiently capitalized or is not controlled through voting (or similar rights) should be consolidated. FAS 167 will require a company to provide additional disclosures about its involvement with variable interest entities and any significant changes in risk

#### Table of Contents

exposure due to that involvement. FAS 167 will become effective for the Company s fiscal year beginning January 1, 2010. The Company is currently evaluating the effect, if any, the adoption of FAS 167 will have on its consolidated financial statements.

#### 4. Credit Derivatives

Financial guarantees written in credit derivative form issued by the Company, principally in the form of insured credit default swap ( CDS ) contracts, have been deemed to meet the definition of a derivative under FAS No. 133, Accounting for Derivative Instruments and Hedging Activities ( FAS 133 ), FAS No. 149, Amendment of Statement 133 on Derivative Instruments and Hedging Activities ( FAS 149 ) and FAS No. 155, Accounting for Certain Hybrid Financial Instruments ( FAS 155 ). FAS 133 and FAS 149 require that an entity recognize all derivatives as either assets or liabilities in the consolidated balance sheets and measure those instruments at fair value. If certain conditions are met, a derivative may be specifically designated as a fair value, cash flow or foreign currency hedge. FAS 155 requires companies to recognize freestanding or embedded derivatives relating to beneficial interests in securitized financial instruments. This recognition was not required prior to January 1, 2007. The accounting for changes in the fair value of a derivative depends on the intended use of the derivative and the resulting designation.

Realized gains and other settlements on credit derivatives include credit derivative premiums received and receivable for credit protection the Company has sold under its insured CDS contracts as well as any contractual claim losses paid and payable related to insured credit events under these contracts, ceding commissions (expense) income and realized gains or losses related to their early termination. The Company generally holds credit derivative contracts to maturity. However, if events of default or termination events specified in the documentation were to occur, the non-defaulting or the non-affected party, which may be either the Company or the counterparty, depending upon the circumstances may decide to terminate a credit derivative prior to maturity.

The following table disaggregates realized gains and other settlements on credit derivatives into its component parts for the three- and six-month periods ended June 30, 2009 and 2008 (dollars in thousands):

|   | Three Months Ended<br>June 30, |        |   |      |        | Six Months Ended<br>June 30, |      |        |   |    |        |
|---|--------------------------------|--------|---|------|--------|------------------------------|------|--------|---|----|--------|
|   | 2009                           |        |   | 2008 |        |                              | 2009 |        |   |    | 2008   |
| Realized gains and other settlements on credit derivatives                |                                |        |   |      |        |                              |      |        |   |    |        |
| Net credit derivative premiums received and receivable                    | \$                             | 27,953 |   | \$   | 31,486 |                              | \$   | 57,468 |   | \$ | 59,308 |
| Net credit derivative losses (paid and payable) recovered and recoverable |                                | 15     |   |      | 366    |                              |      | (9,043 | ) |    | 380    |
| Ceding commissions received/receivable (paid/payable), net                |                                | (152   | ) |      | (59    | )                            |      | (30    | ) |    | (278)  |
| Total realized gains and other settlements on credit derivatives          | \$                             | 27,816 |   | \$   | 31,793 |                              | \$   | 48,395 |   | \$ | 59,410 |

Unrealized gains (losses) on credit derivatives represent the adjustments for changes in fair value that are recorded in each reporting period, under FAS 133. Changes in unrealized gains and losses on credit derivatives are reflected in the consolidated statements of operations and comprehensive income in unrealized gains (losses) on credit derivatives. Cumulative unrealized losses, determined on a contract by contract

basis, are reflected as either net assets or net liabilities in the Company s balance sheets. Unrealized gains and losses resulting from changes in the fair value of credit derivatives occur because of changes in interest rates, credit spreads, the credit ratings of the referenced entities and the issuing company s own credit rating and other market factors. The unrealized gains and losses on credit derivatives will reduce to zero as the exposure approaches its maturity date, unless there is a payment default on the exposure or early termination. Changes in the fair value of the Company s credit derivative contracts do not generally reflect actual claims or credit losses, and have no impact on the Company s claims paying resources, rating agency capital or regulatory capital positions.

The Company determines the fair value of its credit derivative contracts primarily through modeling that uses various inputs such as credit spreads, based on observable market indices and on recent pricing for similar

#### Table of Contents

contracts, and expected contractual life to derive an estimate of the value of our contracts in our principal market (see Note 5). Credit spreads capture the impact of recovery rates and performance of underlying assets, among other factors, on these contracts. The Company s pricing model takes into account not only how credit spreads on risks that it assumes affects pricing, but also how the Company s own credit spread affects the pricing of its deals. If credit spreads of the underlying obligations change, the fair value of the related credit derivative changes. Market liquidity could also impact valuations of the underlying obligations.

The impact of changes in credit spreads will vary based upon the volume, tenor, interest rates, and other market conditions at the time these fair values are determined. In addition, since each transaction has unique collateral and structure terms, the underlying change in fair value of each transaction may vary considerably. The fair value of credit derivative contracts also reflects the change in the Company s own credit cost based on the price to purchase credit protection on AGC. During Second Quarter 2009 and Six Months 2009, the Company incurred net pre-tax unrealized losses on credit derivatives of \$(254.3) million and \$(227.3) million, respectively. As of June 30, 2009 the net credit liability includes a reduction in the liability of \$4,240.5 million representing AGC s credit value adjustment, which is based on the market cost of AGC s credit protection of 1,544 basis points. Management believes that the trading level of AGC s credit spread is due to the correlation between AGC s risk profile and that experienced currently by the broader financial markets and increased demand for credit protection against AGC as the result of its direct segment financial guarantee volume as well as the overall lack of liquidity in the CDS market. Offsetting the benefit attributable to AGC s credit spread were declines in fixed income security market prices primarily attributable to widening spreads in certain markets as a result of the continued deterioration in credit markets and some credit rating downgrades. The higher credit spreads in the fixed income security market are primarily due to the recent lack of liquidity in the high yield collateralized debt obligation and collateralized loan obligation markets as well as continuing market concerns over the most recent vintages of subprime residential mortgage backed securities and commercial mortgage backed securities.

During Second Quarter 2008 and Six Months 2008, the Company incurred net pre-tax unrealized gains on credit derivatives of \$708.5 million and \$448.9 million, respectively. The Second Quarter gain included a gain of \$958.7 million associated with the change in AGC s credit spread, which widened substantially from 540 basis points at March 31, 2008 to 900 basis points at June 30, 2008.

The total notional amount of credit derivative exposure outstanding as of June 30, 2009 and December 31, 2008 and included in the Company s financial guaranty exposure was \$73.5 billion and \$75.1 billion, respectively.

The components of the Company s unrealized gain (loss) on credit derivatives as of June 30, 2009 are:

| As of June 30, 2009                        |   |      |  |    |         |   |         |  |  |

(1) Based on the Company s internal rating, which is on a comparable scale to that of the nationally recognized rating agencies.

Corporate collateralized loan obligations, market value collateralized debt obligations ( CDOs ), and trust preferred securities, which comprise the Company s pooled corporate exposures, include all U.S. structured finance pooled corporate obligations and international pooled corporate obligations. Commercial mortgage-backed

#### **Table of Contents**

securities are comprised of commercial U.S. structured finance and commercial international mortgage backed securities. Residential mortgage-backed securities are comprised of prime and subprime U.S. mortgage-backed and home equity securities, international residential mortgage-backed and international home equity securities. Other includes all other U.S. and international asset classes, such as commercial receivables, and international infrastructure and pooled infrastructure securities.

The Company s exposure to pooled corporate obligations is highly diversified in terms of obligors and industries. Most pooled corporate transactions are structured to limit exposure to any given obligor and industry. The majority of the Company s pooled corporate exposure in the direct segment consists of collateralized loan obligations (CLOs). Most of these direct CLOs have an average obligor size of less than 1% and typically restrict the maximum exposure to any one industry to approximately 10%. The Company s exposure also benefits from embedded credit enhancement in the transactions which allows a transaction to sustain a certain level of losses in the underlying collateral, further insulating the Company from industry specific concentrations of credit risk on these deals.

The Company s \$10.1 billion exposure to Other CDS contracts is also highly diversified. It includes \$4.3 billion of exposure to four pooled infrastructure transactions comprised of diversified pools of international infrastructure project transactions and loans to regulated utilities. These pools were all structured with underlying credit enhancement sufficient for the Company to attach at super senior AAA levels. The remaining \$5.8 billion of exposure in Other CDS contracts is comprised of numerous deals typically structured with significant underlying credit enhancement and spread across various asset classes, such as commercial receivables, infrastructure, regulated utilities and consumer receivables. Substantially all of this \$10.1 billion of exposure is rated investment grade and the weighted average credit rating is AA-.

The unrealized gain of \$12.4 million in Second Quarter 2009 and \$154.8 million in Six Months 2009 on Other CDS contracts is primarily attributable to implied spread narrowing during Six Months 2009 on several UK public finance infrastructure transactions and a film securitization transaction .

With considerable volatility continuing in the market, unrealized gains (losses) on credit derivatives may fluctuate significantly in future periods.

The Company s exposure to the mortgage industry is discussed in Note 7.

The following table presents additional details about the Company s unrealized loss on pooled corporate obligation credit derivatives, which includes collateralized loan obligations, market value CDOs and trust preferred securities, by asset type as of June 30, 2009:

|                                  |                              |   |                          |   |     |                                  |  | S         | econd  |    |             |   |

As of June 30, 2009 and December 31, 2008, the Company considered the impact of its own credit risk, in combination with credit spreads on risk that it assumes through CDS contracts, in determining the fair value of its credit derivatives. The Company determines its own credit risk based on quoted CDS prices traded on the Company at each balance sheet date. The quoted price of CDS contracts traded on AGC at June 30, 2009 and December 31, 2008 was 1,544 basis points and 1,775 basis points, respectively. Historically, the price of CDS traded on AGC moves directionally the same as general market spreads. Generally, a widening of the CDS prices traded on AGC has an effect of offsetting unrealized losses that result from widening general market credit spreads, while a narrowing of the CDS prices traded on AGC has an effect of offsetting unrealized gains that result from narrowing general market credit spreads. An overall narrowing of spreads generally results in an unrealized gain on credit derivatives for the Company and an overall widening of spreads generally results in an unrealized loss for the Company. At

June 30, 2009, the values of our CDS contracts before and after considering implications of our credit spreads were \$(4,979.9) million and \$(739.4) million, respectively. At December 31, 2008, the values of our CDS contracts before and after considering implications of our credit spreads were \$(4,686.8) million and \$(539.2) million, respectively.

## Table of Contents

In general, the Company structures credit derivative transactions such that the circumstances giving rise to our obligation to make loss payments is similar to that for financial guaranty insurance policies and only occurs as losses are realized on the underlying reference obligation. Nonetheless, credit derivative transactions are governed by International Swaps and Derivatives Association, Inc. ( ISDA ) documentation and operate differently from financial guaranty insurance policies. For example, our control rights with respect to a reference obligation under a credit derivative may be more limited than when we issue a financial guaranty policy on a direct primary basis. In addition, while our exposure under credit derivatives, like our exposure under financial guaranty policies, has been generally for as long as the reference obligation remains outstanding, unlike financial guaranty insurance policies, a credit derivative may be terminated for a breach of the ISDA documentation or other specific events.

If certain of its credit derivative contracts are terminated the Company could be required to make a termination payment as determined under the relevant documentation. Under certain documents, the Company may have the right to cure the termination event by posting collateral, assigning its rights and obligations in respect of the transactions to a third party or seeking a third party guaranty of the obligations of the Company. As of the date of this filing, if AGC s ratings are downgraded to levels between BBB or Baa2 and BB+ or Ba1, certain CDS counterparties could terminate certain CDS contracts covering approximately \$7.7 billion par insured, compared to \$16.6 billion as of March 31, 2009. As of the date of this filing, if AGRO s ratings are downgraded to BBB- or Baa3, certain CDS counterparties could terminate certain CDS contracts covering approximately \$3.2 million par insured. As of the date of this filing, AG Re has no exposure subject to termination based on its rating. Given current market conditions, the Company does not believe that it can accurately estimate the termination payments it could be required to make if, as a result of any such downgrade, a CDS counterparty terminated its CDS contracts with the Company. These payments could have a material adverse effect on the Company s liquidity and financial condition.

During Second Quarter 2009, the Company entered into agreements with two CDS counterparties which previously had the right to terminate certain CDS contracts in the event that AGC was downgraded to below AA- or Aa3, in one case, or below A- or A3, in the other case. These agreements eliminated the ability of those CDS counterparties to receive a termination payment. In return, the Company agreed to post \$325 million in collateral to secure its potential payment obligations under those CDS contracts, which cover approximately \$18.6 billion of par insured. The collateral posting requirement would increase to \$375 million if AGC were downgraded to below AA- or A2. The posting of this collateral has no impact on the Company s net income or shareholders—equity under U.S. GAAP nor does it impact AGC—s statutory surplus or net income. In addition, in July 2009, we terminated an ISDA master agreement with Lehman Brothers International (Europe) (LBIE) due to its default under the agreement. The Company has discussed with several other CDS counterparties the reduction of its exposure to possible termination payments. The Company can give no assurance that any agreement will be reached with any such CDS counterparty.

In addition to the collateral posting described in the previous paragraph, under a limited number of other CDS contracts, the Company may be required to post eligible securities as collateral -- generally cash or U.S. government or agency securities. This requirement is based generally on a mark-to-market valuation in excess of contractual thresholds which decline if the Company s ratings decline. As of the date of this filing, the Company is posting approximately \$160.2 million of collateral in respect of approximately \$1.5 billion of par insured. Any amounts required to be posted as collateral in the future will depend on changes in the market values of these transactions. The amount that the Company could be required to post upon any downgrade cannot be quantified at this time, but could be substantial and could have a material adverse effect on the Company s liquidity. If AGC were downgraded below A- or A3, certain of the contractual thresholds would be reduced or eliminated and the amount of par that could be subject to collateral posting requirements would be reduced or eliminated and the amount of par that could be subject to collateral posting requirements would be reduced or eliminated and the amount of par that could be subject to collateral posting requirements would be \$11.5 million in the case of AGRO.

The following table summarizes the estimated change in fair values on the net balance of the Company s credit derivative positions assuming immediate parallel shifts in credit spreads on AGC and on the risks that it assumes at June 30, 2009:

(Dollars in millions)

## Background

Effective January 1, 2008, the Company adopted FAS No. 157, Fair Value Measurements (FAS 157). FAS 157 defines fair value, establishes a framework for measuring fair value and expands disclosures about fair value measurements. FAS 157 applies to other accounting pronouncements that require or permit fair value measurements, but does not require any new fair value measurements.

FAS 157 defines fair value as the price that would be received to sell an asset or paid to transfer a liability (an exit price) in an orderly transaction between market participants on the measurement date. The price represents that available in the principal market for the asset or liability. If there is no principal market, then the price is based on the market that maximizes the value received for an asset or minimizes the amount paid for a liability (i.e. the most advantageous market).

FAS 157 specifies a fair value hierarchy based on whether the inputs to valuation techniques used to measure fair value are observable or unobservable. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect Company estimates of market assumptions. In accordance with FAS 157, the fair value hierarchy prioritizes model inputs into three broad levels as follows:

- Level 1 Quoted prices for identical instruments in active markets.
- Level 2 Quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and observable inputs other than quoted prices, such as interest rates or yield curves and other inputs derived from or corroborated by observable market inputs.
- Level 3 Model derived valuations in which one or more significant inputs or significant value drivers are unobservable. This hierarchy requires the use of observable market data when available.

An asset or liability s categorization within the fair value hierarchy is based on the lowest level of significant input to its valuation.

## Table of Contents

## Effect on the Company s financial statements

FAS 157 applies to both amounts recorded in the Company s financial statements and to disclosures. Amounts recorded at fair value in the Company s financial statements on a recurring basis are fixed maturity securities available for sale, short-term investments, credit derivative assets and liabilities relating to the Company s CDS contracts and CCS Securities. The fair value of these items as of June 30, 2009 is summarized in the following table.

| (Dollars in millions)                           |    | Fa | ir Value | Activ<br>for | ed Prices in<br>re Markets<br>Identical<br>Assets<br>Level 1) | Ol | ficant Other<br>bservable<br>Inputs<br>Level 2) |  | Une | gnificant<br>observable<br>Inputs<br>Level 3) |

#### Fixed Maturity Securities and Short-term Investments

The fair value of fixed maturity securities and short-term investments is determined using one of three different pricing services: pricing vendors, index providers or broker-dealer quotations. Pricing services for each sector of the market are determined based upon the provider s expertise.

Typical inputs used by these three pricing methods include, but are not limited to, reported trades, benchmark yields, issuer spreads, bids, offers, and/or estimated cash flows and prepayments speeds. Based on the typical trading volumes and the lack of quoted market prices for fixed maturities, third party pricing services will normally derive the security prices through recent reported trades for identical or similar securities making adjustments through the reporting date based upon available market observable information as outlined above. If there are no recent reported trades, the third party pricing services and brokers may use matrix or model processes to develop a security price where future cash flow expectations are developed based upon collateral performance and discounted at an estimated market rate. Included in the pricing of asset backed securities are estimates of the rate of future prepayments of principal over the remaining life of the securities. Such estimates are derived based on the characteristics of the underlying structure and prepayment speeds previously experienced at the interest rate levels projected for the

underlying collateral. The Company does not make any internal adjustments to prices provided by its third party pricing service.

The Company has analyzed the third party pricing services—valuation methodologies and related inputs, and has also evaluated the various types of securities in its investment portfolio to determine an appropriate FAS 157 fair value hierarchy level based upon trading activity and observability of market inputs. Based on this evaluation, each price was classified as Level 1, 2 or 3. Prices provided by third party pricing services with market

## Table of Contents

observable inputs are classified as Level 2. Prices on the money fund portion of short-term investments are classified as Level 1. No investments were classified as Level 3 as of or for the three- and six-month periods ended June 30, 2009.

#### Committed Capital Securities ( CCS Securities )

The fair value of CCS Securities represents the present value of remaining expected put option premium payments under the CCS Securities agreements and the value of such estimated payments based upon the quoted price for such premium payments as of June 30, 2009 (see Note 10). The \$10.2 million fair value asset for CCS Securities is included in the consolidated balance sheet. Changes in fair value of this asset are included in other income in the consolidated statement of operations and comprehensive income. The significant market inputs used are observable, therefore, the Company classified this fair value measurement as Level 2.

## Level 3 Valuation Techniques

Financial instruments are considered Level 3 when their values are determined using pricing models, discounted cash flow methodologies or similar techniques and at least one significant model assumption or input is unobservable. Level 3 financial instruments also include those for which the determination of fair value requires significant management judgment or estimation. A brief description of the valuation techniques used for Level 3 assets and liabilities is provided below.

## Credit Derivatives

The Company s credit derivatives consist of insured CDS contracts (see Note 4). As discussed in Note 4, the Company does not typically exit its credit derivative contracts, and there are no quoted prices for its instruments or for similar instruments. Observable inputs other than quoted market prices exist; however, these inputs reflect contracts that do not contain terms and conditions similar to the credit derivative contracts issued by the Company. Therefore, the valuation of credit derivative contracts requires the use of models that contain significant, unobservable inputs. Thus, we believe the credit derivative valuations are in Level 3 in the fair value hierarchy discussed above.

The fair value of the Company s credit derivative contracts represents the difference between the present value of remaining expected premiums the Company receives for the credit protection and the estimated present value of premiums that a comparable financial guarantor would hypothetically charge the Company for the same protection at the balance sheet date. The fair value of the Company s credit derivatives depends on a number of factors including notional amount of the contract, expected term, credit spreads, changes in interest rates, the credit ratings of referenced entities, the Company s own credit risk and remaining contractual cash flows. Contractual cash flows, which are included in the Realized gains and other settlements on credit derivatives fair value component of credit derivatives, are the most readily observable variables of the fair value of credit derivative contracts since they are based on contractual terms. These variables include (i) net premiums received and receivable on written credit derivative contracts, (ii) net premiums paid and payable on purchased contracts, (iii) losses paid and payable to credit derivative contract counterparties and (iv) losses recovered and recoverable on purchased contracts. The remaining key variables described above impact. Unrealized gains (losses) on credit derivatives.

Market conditions at June 30, 2009 were such that market prices of the Company s CDS contracts were not generally available. Where market prices were not available, the Company used a combination of observable market data and valuation models, using various market indices, credit spreads, the Company s own credit risk, and estimated contractual payments to estimate the Unrealized gains (losses) on credit derivatives portion of the fair value of its credit derivatives. These models are primarily developed internally based on market conventions for similar transactions.

Management considers the non-standard terms of its credit derivative contracts in determining the fair value of these contracts. These terms differ from credit derivatives sold by companies outside the financial guaranty industry. The non-standard terms include the absence of collateral support agreements or immediate settlement provisions, relatively high attachment points and the fact that the Company does not exit derivatives it sells for credit protection purposes, except under specific circumstances such as exiting a line of business. Because of these terms and conditions, the fair value of the Company s credit derivatives may not reflect the same prices observed in an actively traded market of credit derivatives that do not contain terms and conditions similar to those observed in

#### **Table of Contents**

the financial guaranty market. These models and the related assumptions are continuously reevaluated by management and enhanced, as appropriate, based upon improvements in modeling techniques and availability of more timely market information.

Valuation models include the use of management estimates and current market information. Management is also required to make assumptions on how the fair value of credit derivative instruments is affected by current market conditions. Management considers factors such as current prices charged for similar agreements, performance of underlying assets, life of the instrument, and the extent of credit derivative exposure the Company ceded under reinsurance agreements, and the nature and extent of activity in the financial guaranty credit derivative marketplace. The assumptions that management uses to determine its fair value may change in the future due to market conditions. Due to the inherent uncertainties of the assumptions used in the valuation models to determine the fair value of these credit derivative products, actual experience may differ from the estimates reflected in the Company s consolidated financial statements and the differences may be material.

Listed below are various inputs and assumptions that are key to the establishment of our fair value for CDS contracts.

Assumptions

The key assumptions of our internally developed model include:

- Gross spread is the difference between the yield of a security paid by an issuer on an insured versus uninsured basis or, in the case of a CDS transaction, the difference between the yield and an index such as LIBOR. Such pricing is well established by historical financial guarantee fees relative to capital market spreads as observed and executed in competitive markets, including in financial guarantee reinsurance and secondary market transactions.
- Gross spread on a financial guarantee written in CDS form is allocated among 1) profit the originator, usually an investment bank, realizes for putting the deal together and funding the transaction, 2) premiums paid to us for our credit protection provided and 3) the cost of CDS protection purchased on us by the originator to hedge their counterparty credit risk exposure to the Company. The premium the Company receives is referred to as the net spread. The Company s own credit risk is factored into the determination of net spread based on the impact of changes in the quoted market price for credit protection bought on the Company, as reflected by quoted market prices on CDS sold on Assured Guaranty Corp. The cost to acquire CDS protection sold on AGC affects the amount of spread on CDS deals that the Company captures and, hence, their fair value. As the cost to acquire CDS protection sold on AGC increases the amount of premium we capture on a deal generally decreases. As the cost to acquire CDS protection sold on AGC decreases the amount of premium we capture on a deal generally increases. In our model, the premium we capture is not permitted to go below the minimum rate that we would currently charge to assume similar risks. This has the effect of mitigating the amount of unrealized gains that are recognized on certain CDS contracts.
- The Company determines the fair value of its CDS contracts by applying the net spread for the remaining duration of each contract to the notional value of its CDS contracts.
- Actual transactions are used to validate the model results and to explain the correlation between various market indices and indicative CDS market prices.

Inputs

The specific model inputs are listed below, including how we derive inputs for market credit spreads on the underlying transaction collateral.

• Gross spread This is an input into the Company s fair value model that is used to ultimately determine the net spread a comparable financial guarantor would charge the Company to transfer risk at the reporting date. The Company s estimate of fair value represents the difference between the estimated present value of premiums that a comparable financial guarantor would accept to assume the risk from the Company on the current reporting date, on terms identical to the original contracts written by the Company and at the contractual premium for each individual credit derivative contract. This is an observable input that the Company obtains for deals it has closed or bid on in the market place.

#### **Table of Contents**

- Credit spreads on risks assumed These are obtained from market data sources published by third parties (e.g. dealer spread tables for the collateral similar to assets within our transactions) as well as collateral-specific spreads provided by trustees or obtained from market sources. If observable market credit spreads are not available or reliable for the underlying reference obligations, then market indices are used that most closely resembles the underlying reference obligations, considering asset class, credit quality rating and maturity of the underlying reference obligations. As discussed previously, these indices are adjusted to reflect the non-standard terms of the Company s CDS contracts. As of June 30, 2009, the Company obtained approximately 20% of its credit spread data, based on notional par outstanding, from sources published by third parties, while 80% was obtained from market sources or similar market indices. Market sources determine credit spreads by reviewing new issuance pricing for specific asset classes and receiving price quotes from their trading desks for the specific asset in question. Management validates these quotes by cross-referencing quotes received from one market source against quotes received from another market source to ensure reasonableness. In addition, we compare the relative change in price quotes received from one quarter to another, with the relative change experienced by published market indices for a specific asset class. Collateral specific spreads obtained from third-party, independent market sources are un-published spread quotes from market participants and or market traders whom are not trustees. Management obtains this information as the result of direct communication with these sources as part of the valuation process.
- Credit spreads on the Company s name The Company obtains the quoted price of CDS contracts traded on AGC from market data sources published by third parties.

The following is an example of how changes in gross spreads, the Company s own credit spread and the cost to buy protection on the Company affect the amount of premium the Company can demand for its credit protection. Scenario 1 represents the market conditions in effect on the transaction date and Scenario 2 represents market conditions at a subsequent reporting date.

|   | S   | cenario | 1          |   |     | Scenario 2 | 2          |   |
|---|-----|---------|------------|---|-----|------------|------------|---|
|   | bps |         | % of Total |   | bps |            | % of Total |   |
| Original Gross Spread / Cash Bond Price |     |         |            |   |     |            |            |   |
| (in Bps)                                | 185 |         |            |   | 500 |            |            |   |
| Bank Profit (in Bps)                    | 115 |         | 62         | % | 50  |            | 10         | % |
| Hedge Cost (in Bps)                     | 30  |         | 16         | % | 440 |            | 88         | % |
| AGC Premium Received Per Annum (in Bps) | 40  |         | 22         | % | 10  |            | 2          | % |

In Scenario 1, the gross spread is 185bps. The bank or deal originator captures 115bps of the original gross spread and hedges 10% of its exposure to AGC, when the CDS spread on AGC was 300bps (300bps  $\times$  10% = 30bps). Under this scenario AGC received premium of 40bps, or 22% of the gross spread.

In Scenario 2, the gross spread is 500bps. The bank or deal originator captures 50bps of the original gross spread and hedges 25% of its exposure to AGC, when the CDS spread on AGC was 1,760bps  $(1,760bps \times 25\% = 440bps)$ . Under this scenario AGC would receive premium of 10bps, or 2% of the gross spread.

In this example, the contractual cash flows (the AGC premium above) exceed the amount a market participant would require AGC to pay in today s market to accept its obligations under the credit default swap contract, thus resulting in an asset. This credit derivative asset is equal to the difference in premium rate discounted at a risk adjusted rate over the weighted average remaining life of the contract. The expected future cash flows for the Company s credit derivatives were discounted at rates ranging from 1.0% to 7.0% over LIBOR at June 30, 2009, with over 99% of the transactions ranging from 1.0% to 6.0% over LIBOR.

The Company corroborates the assumptions in its fair value model, including the amount of exposure to the Company hedged by its counterparties, with independent third parties each reporting period. Recent increases in the CDS spread on AGC have resulted in the bank or deal originator hedging a greater portion of its exposure to AGC. This has the effect of reducing the amount of contractual cash flows AGC can capture for selling our protection.

The amount of premium a financial guaranty insurance market participant can demand is inversely related to the cost of credit protection on the insurance company as measured by market credit spreads. This is because the buyers of credit protection typically hedge a portion of their risk to the financial guarantor, due to the fact that contractual terms of financial guaranty insurance contracts typically do not require the posting of collateral by the guarantor. The widening of a financial guarantor s own credit spread increases the cost to buy credit protection on

## Table of Contents

the guarantor, thereby, reducing the amount of premium the guarantor can capture out of the gross spread on the deal. The extent of the hedge depends on the types of instruments insured and the current market conditions.

A credit derivative asset under FAS 157 is the result of contractual cash flows on in-force deals in excess of what a hypothetical financial guarantor could receive if it sold protection on the same risk as of the current reporting date. If the Company were able to freely exchange these contracts (i.e., assuming its contracts did not contain proscriptions on transfer and there was a viable exchange market), it would be able to realize an asset representing the difference between the higher contractual premiums to which it s entitled and the current market premiums for a similar contract.

To clarify, management does not believe there is an established market where financial guaranty insured credit derivatives are actively traded. The terms of the protection under an insured financial guaranty credit derivative do not, except for certain rare circumstances, allow the Company to exit its contracts. Management has determined that the exit market for the Company s credit derivatives is a hypothetical one based on its entry market. Management has tracked the historical pricing of the Company s deals to establish historical price points in the hypothetical market that are used in the fair value calculation.

The following spread hierarchy is utilized in determining which source of spread to use, with the rule being to use CDS spreads where available. If not available, the Company either interpolates or extrapolates CDS spreads based on similar transactions or market indices.

- 1. Actual collateral specific credit spreads (if up-to-date and reliable market-based spreads are available, they are used).
- 2. Credit spreads are interpolated based upon market indices or deals priced or closed during a specific quarter within a specific asset class and specific rating.
- 3. Credit spreads provided by the counterparty of the credit default swap.
- 4. Credit spreads are extrapolated based upon transactions of similar asset classes, similar ratings, and similar time to maturity.

Over time the data inputs can change as new sources become available or existing sources are discontinued or are no longer considered to be the most appropriate. It is the Company s objective to move to higher levels on the hierarchy whenever possible, but it is sometimes necessary to move to lower priority inputs because of discontinued data sources or management s assessment that the higher priority inputs are no longer considered to be representative of market spreads for a given type of collateral. This can happen, for example, if transaction volume changes such that a previously used spread index is no longer viewed as being reflective of current market levels.

As of June 30, 2009, the Company obtained approximately 8% of its credit spread information, based on notional par outstanding, from actual collateral specific credit spreads, while 80% was based on market indices and 12% was based on spreads provided by the CDS counterparty. The Company interpolates a curve based on the historical relationship between premium the Company receives when a financial guarantee written in CDS form closes to the daily closing price of the market index related to the specific asset class and rating of the deal. This curve indicates expected credit spreads at each indicative level on the related market index. For specific transactions where no price quotes are available and credit spreads need to be extrapolated, an alternative transaction for which the Company has received a spread quote from one of the first three sources within the Company s spread hierarchy is chosen. This alternative transaction will be within the same asset class, have similar underlying

assets, similar credit ratings, and similar time to maturity. The Company then calculates the percentage of relative spread change quarter over quarter for the alternative transaction. This percentage change is then applied to the historical credit spread of the transaction for which no price quote was received in order to calculate the transactions current spread. Counterparties determine credit spreads by reviewing new issuance pricing for specific asset classes and receiving price quotes from their trading desks for the specific asset in question. These quotes are validated by cross-referencing quotes received from one market source with those quotes received from another market source to ensure reasonableness. In addition, management compares the relative change experienced on published market indices for a specific asset class for reasonableness and accuracy.

The Company s credit derivative valuation model, like any financial model, has certain strengths and weaknesses.

The primary strengths of the Company s CDS modeling techniques are:

#### **Table of Contents**

- The model takes account of transaction structure and the key drivers of market value. The transaction structure includes par insured, weighted average life, level of subordination and composition of collateral.
- The model maximizes the use of market-driven inputs whenever they are available. The key inputs to the model are market-based spreads for the collateral, and the credit rating of referenced entities. These are viewed by us to be the key parameters that affect fair value of the transaction.
- The Company is able to use actual transactions to validate its model results and to explain the correlation between various market indices and indicative CDS market prices.
- The model is a well-documented, consistent approach to valuing positions that minimizes subjectivity. The Company has developed a hierarchy for market-based spread inputs that helps mitigate the degree of subjectivity during periods of high illiquidity.

The primary weaknesses of the Company s CDS modeling techniques are:

- There is no exit market or actual exit transactions. Thus our exit market is a hypothetical one based on our entry market.
- There is a very limited market in which to verify the fair values developed by the Company s model.
- At June 30, 2009, the markets for the inputs to the model were highly illiquid, which impacts their reliability. However, the Company employs various procedures to corroborate the reasonableness of quotes received and calculated by our internal valuation model, including comparing to other quotes received on similarly structured transactions, observed spreads on structured products with comparable underlying assets and, on a selective basis when possible, through second independent quotes on the same reference obligation.
- Due to the non-standard terms under which the Company enters into derivative contracts, the fair value of its credit derivatives may not reflect the same prices observed in an actively traded market of credit derivatives that do not contain terms and conditions similar to those observed in the financial guaranty market.

As discussed above, the Company does not trade or exit its credit derivative contracts in the normal course of business. As such, the ability to test modeled results is limited by the absence of actual exit transactions. However, management does compare modeled results to actual data that is available. Management first attempts to compare modeled values to premiums on deals the Company received on new deals written within the reporting period. If no new transactions were written for a particular asset type in the period or if the number of transactions is not reflective of a representative sample, management compares modeled results to premium bids offered by the Company to provide credit protection on new transactions within the reporting period, the premium the Company has received on historical transactions to provide credit protection in net tight and wide credit environments and/or the premium on transactions closed by other financial guaranty insurance companies during the reporting period.

The net par outstanding of the Company s credit derivative contracts was \$73.5 billion and \$75.1 billion at June 30, 2009 and December 31, 2008, respectively. The estimated remaining average life of these contracts at June 30, 2009 was 8.2 years.

As required by FAS 157, financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. As of June 30, 2009, these contracts are classified as Level 3 in the FAS 157 hierarchy since there is reliance on at least one unobservable input deemed significant to the valuation model, most significantly the Company sestimate of the value of the non-standard

terms and conditions of its credit derivative contracts and of the Company s current credit standing.

## Table of Contents

The table below presents a reconciliation of the Company s credit derivatives whose fair value included significant unobservable inputs (Level 3) during the three months ended June 30, 2009 and 2008.

(Level 3) **Second Quarter Second Quarter** 2009 2008 **Credit Derivative Credit Derivative** (Dollars in millions) Liability (Asset), net Liability (Asset), net 556,970 881,637 Beginning Balance Total gains or losses realized and unrealized 254,284 Unrealized losses (gains) on credit derivatives (708,502)Realized gains and other settlements on credit derivatives (27,816)(31,793)Current period net effect of purchases, settlements and other activity included in unrealized portion of beginning balance 27,964 24,601 Transfers in and/or out of Level 3

## Table of Contents

Items in the Company s financial statements measured at fair value but carried at historical cost are unearned premiums reserve, 7.0% Senior Notes, 8.5% Senior Notes, Series A Enhanced Junior Subordinated Debentures and financial guaranty installment premiums (prior to adoption of FAS 163). The fair values of these items as of June 30, 2009 and December 31, 2008 are summarized in the following table.

As of June 30, 2009

|   |    |          | Fair Value Measu |                       |   |  |       |   |              | ement | s Using  |  |                          |

**Unearned Premium Reserves** 

The fair value of the Company s unearned premium reserves was based on the estimated cost of entering into a cession of entire financial guaranty insurance portfolio with third party reinsurers under current market conditions. This figure was based on management s estimate of what a similarly rated financial guaranty insurance company would demand to assume the Company s in-force book of financial guaranty insurance business. This amount was based on the pricing assumptions we have observed in recent portfolio transfers that have occurred in the financial guaranty market and included adjustments to the carrying value of unearned premiums reserves for stressed losses and ceding commissions. The significant inputs for stressed losses

| <b>m</b> | . 1 |   | c  | $\sim$       |    |    |     |
|----------|-----|---|----|--------------|----|----|-----|
| Tal      | hl  | e | Ωt | $\mathbf{C}$ | าท | te | nts |

and ceding commissions were not readily observable inputs, therefore, the Company classified this fair value measurement as Level 3.

#### 7.0% Senior Notes and Series A Enhanced Junior Subordinated Debentures

The fair value of the Company s \$200.0 million of Senior Notes (7.0% Senior Notes) and \$150.0 million of Series A Enhanced Junior Subordinated Debentures are determined by calculating the midpoint of quoted bid/ask prices over the U.S. Treasury yield at the year-end date and the appropriate credit spread for similar debt instruments. The significant market inputs used are observable, therefore, the Company classified this fair value measurement as Level 2.

#### 8.50 % Senior Notes

The Company s subsidiary, AGUS, issued \$172.5 million par, 8.50% Senior Notes on June 24, 2009. The fair value of the 8.50% Senior Notes approximates the carrying value, which is based on the net cash proceeds received and adjusted for the accrued interest for the remaining 6 days through June 30, 2009.

#### **Future Installment Premiums**

As described in Note 2, with the adoption of FAS 163 effective January 1, 2009, future installment premiums are included in the unearned premium reserves. See Unearned Premium Reserves section above for additional information.

Prior to adoption of FAS 163, future installment premiums were not recorded in the Company s financial statements. The fair value of the Company s installment premiums was derived by calculating the present value of the estimated future cash flow stream for financial guaranty installment premiums discounted at 6.0%. The significant inputs used to fair value this item were observable, therefore, the Company classified this fair value measurement as Level 2.

#### 6. Investments

The following table summarizes the Company s aggregate investment portfolio as of June 30, 2009:

|  | Amortized | Gross<br>Unrealized | Gross<br>Unrealized | Estimated  |  | OTTI in |
|--|-----------|---------------------|---------------------|------------|--|---------|
|  | Amortized | Unrealized          | Unrealized          | Estimated  |  | OTTI in |

<sup>(1)</sup> Reclassified to conform to the current period s presentation.

Approximately 22% and 29% of the Company s total investment portfolio as of June 30, 2009 and December 31, 2008, respectively, was composed of mortgage backed securities, including collateralized mortgage obligations and commercial mortgage backed securities. As of June 30, 2009 and December 31, 2008, respectively, approximately 66% and 69% of the Company s total mortgage backed securities were government agency obligations. As of both June 30, 2009 and December 31, 2008, the weighted average credit quality of the Company s entire investment portfolio was AA+. The Company s portfolio is comprised primarily of high-quality, liquid instruments. The Company continues to receive sufficient information to value its investments and has not had to modify its approach due to the current market conditions.

The amortized cost and estimated fair value of available-for-sale fixed maturity securities as of June 30, 2009, by contractual maturity, are shown below. Expected maturities will differ from contractual maturities because borrowers may have the right to call or prepay obligations with or without call or prepayment penalties.

|  |    | A | mortized<br>Cost |         |         | Estimated<br>Fair Value |
|--|----|---|------------------|---------|---------|-------------------------|
|  |    |   | (in thousan      | ds of U | .S. dol | lars)                   |
| Due within one year                    | \$ |   | 53,871           |         | \$      | 55,569                  |
| Due after one year through five years  |    |   | 724,468          |         |         | 738,542                 |
| Due after five years through ten years |    |   | 537,758          |         |         | 552,951                 |
| Due after ten years                    |    |   | 1,037,662        |         |         | 1,042,421               |
| Mortgage-backed securities:            |    |   |                  |         |         |                         |

| Residential mortgage-backed securities |    | 801,748   |    | 790,799   |
|--|----|-----------|----|-----------|
| Commercial mortgage-backed securities  |    | 262,876   |    | 232,975   |
| Total                                  | \$ | 3,418,383 | \$ | 3,413,257 |

Proceeds from the sale of available-for-sale fixed maturity securities were \$705.0 million and \$252.5 million for the six months ended June 30, 2009 and 2008, respectively.

Under agreements with its cedants and in accordance with statutory requirements, the Company maintains fixed maturity securities in trust accounts of \$1,346.7 million and \$1,233.4 million as of June 30, 2009 and December 31, 2008, respectively, for the benefit of reinsured companies and for the protection of policyholders, generally in states in which the Company or its subsidiaries, as applicable, are not licensed or accredited.

Under certain derivative contracts, the Company is required to post eligible securities as collateral, generally cash or U.S. government or agency securities. The need to post collateral under these transactions is generally based on mark-to-market valuation in excess of contractual

thresholds. The fair market value of the Company s pledged securities totaled \$547.7 million and \$157.7 million as of June 30, 2009 and December 31, 2008, respectively.

The Company is not exposed to significant concentrations of credit risk within its investment portfolio.

No material investments of the Company were non-income producing for the three and six months ended June 30, 2009 and 2008.

#### **Table of Contents**

## Other-Than Temporary Impairment (OTTI) Methodology

The Company has a formal review process for all securities in its investment portfolio, including a review for impairment losses. Factors considered when assessing impairment include:

- a decline in the market value of a security by 20% or more below amortized cost for a continuous period of at least six months;
- a decline in the market value of a security for a continuous period of 12 months;
- recent credit downgrades of the applicable security or the issuer by rating agencies;
- the financial condition of the applicable issuer;
- whether loss of investment principal is anticipated;
- whether scheduled interest payments are past due; and
- whether the Company has the intent to sell a security prior to its recovery in fair value.

If the Company believes a decline in the value of a particular investment is temporary, the decline is recorded as an unrealized loss on the balance sheet in accumulated other comprehensive income in shareholders equity.

As discussed in more detail below, prior to April 1, 2009, the reviews for impairment of investments were conducted pursuant to FSP No. 115-1, The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments (FSP 115-1) and accordingly, any unrealized loss identified as other than temporary was recorded directly in the consolidated statement of income. As of April 1, 2009, the Company adopted FSP 115-2. Accordingly, any credit-related impairment related to debt securities the Company does not plan to sell and is more-likely-than-not not to be required to sell is recognized in the consolidated statement of income, with the non-credit-related impairment recognized in other comprehensive income (OCI). For other impaired debt securities, where the Company has the intent to sell the security or where the entire impairment is deemed by the Company to be credit-related, the entire impairment is recognized in the consolidated statement of income.

Effective with the adoption of FSP 115-2 the Company recognizes an OTTI loss in earnings for a debt security in an unrealized loss position when either (a) the Company has the intent to sell the debt security or (b) it is more likely than not the Company will be required to sell the debt security before its anticipated recovery. For all debt securities in unrealized loss positions that do not meet either of these two criteria, the Company analyzes the ability to recover the amortized cost by comparing the net present value of projected future cash flows with the amortized cost of the security. If the net present value is less than the amortized cost of the investment, an OTTI loss is recorded. The net present value is calculated by discounting the Company s best estimate of projected future cash flows at the effective interest rate implicit in the debt security prior to impairment. The Company s estimates of projected future cash flows are driven by assumptions regarding probability of default and estimates regarding timing and amount of recoveries associated with a default. The Company develops these estimates using information based on historical experience, credit analysis of an investment, as mentioned above, and market observable data, such as industry analyst reports and forecasts, sector credit ratings and other data relevant to the collectability of the security. For mortgage-backed and asset-backed securities, cash flow estimates also include prepayment assumptions and other assumptions regarding the underlying collateral including default rates, recoveries and changes in value. The determination of the assumptions used in these projections requires the use of significant management judgment.

Prior to adoption of FSP 115-2 on April 1, 2009, if the Company believed the decline was other than temporary, the Company would write down the carrying value of the investment and record a realized loss in its consolidated statement of operations equal to the total difference between amortized cost and fair value at the impairment measurement date.

In periods subsequent to the recognition of an OTTI loss, the impaired debt security is accounted for as if it had been purchased on the measurement date of the impairment. Accordingly, the discount (or reduced premium) based on the new cost basis is accreted into net investment income in future periods based upon the amount and timing of expected future cash flows of the security, if the recoverable value of the investment based upon those cash flows is greater than the carrying value of the investment after the impairment.

The Company s assessment of a decline in value includes management s current assessment of the factors noted above. The Company also seeks advice from its outside investment managers. If that assessment changes in

## Table of Contents

the future, the Company may ultimately record a loss after having originally concluded that the decline in value was temporary.

As part of its OTTI review process, management considers the nature of the investment, the cause for the impairment (interest or credit related), the severity (both as a percentage of book value and absolute dollars) and duration of the impairment, the severity of the impairment regardless of duration, and any other available evidence, such as discussions with investment advisors, volatility of the securities fair value and recent news reports when performing its assessment.

During the three and six months ended June 30, 2009, the Company recorded OTTI losses on fixed maturity securities as follows:

|  | Т  | ree Months Ended               |      | Six Months<br>Ended |          |  |  |  |  |
|--|----|--------------------------------|------|---------------------|----------|--|--|--|--|
|  |    | June 30, 2009                  |      |                     |          |  |  |  |  |
|  |    | (in thousands of U.S. dollars) |      |                     |          |  |  |  |  |
| Total OTTI impairment losses                                 | \$ | (36,466                        | ) \$ | 5                   | (54,912) |  |  |  |  |
| Less: Portion of OTTI loss recognized in OCI (before taxes)  |    | (21,633) (2                    |      |                     |          |  |  |  |  |
| Net impairment losses recognized in statements of operations | \$ | (14,833                        | ) \$ | 3                   | (33,279) |  |  |  |  |

The following table presents a roll-forward of the credit loss component of the amortized cost of fixed maturity securities that the Company has written down for OTTI where the portion related to other factors was recognized in OCI.

| (in thousands of U.S. dollars)   | Three Months<br>Ended June 30, 2009 |        |  |  |  |
|--|-------------------------------------|--------|--|--|--|
| Balance, beginning of period   | \$                                  | 582    |  |  |  |
| Additions for credit losses on securities for which an OTTI was not previously |                                     |        |  |  |  |
| recognized:  |                                     | 14,833 |  |  |  |
| Balance, end of period   | \$                                  | 15,415 |  |  |  |

As of June 30, 2009, amounts, net of tax, in AOCI include \$(37.6) million for securities for which we have recognized OTTI and \$41.2 million for securities for which we have not recognized OTTI. As of December 31, 2008, substantially all of AOCI related to unrealized gains and losses on securities.

The following tables summarize, for all securities in an unrealized loss position as of June 30, 2009 and December 31, 2008, the aggregate fair value and gross unrealized loss by length of time the amounts have continuously been in an unrealized loss position.

| As of June 30, 2009 |            |                   |       |     |            |       |       |  |            |  |  |  |

<sup>(1)</sup> Reclassified to conform to the current period s presentation.

The above unrealized loss balances are comprised of 175 and 218 fixed maturity securities as of June 30, 2009 and December 31, 2008, respectively. As of June 30, 2009, the Company s gross unrealized loss position stood at \$100.7 million compared to \$122.5 million at December 31, 2008. The \$21.8 million decrease in gross unrealized losses was primarily attributable to municipal securities, \$30.1 million, and partially offset by an increase in gross unrealized losses in mortgage- and asset-backed securities, \$6.9 million. The decrease in gross unrealized losses during the six months ended June 30, 2009 was related to the recovery of liquidity in the financial markets offset in part by a \$62.2 million transition adjustment for adoption of FSP 115-2.

As of June 30, 2009, the Company had 95 securities in an unrealized loss position for greater than 12 months, representing a gross unrealized loss of \$48.8 million. Of these securities, 27 securities had unrealized losses greater than 10% of book value. The total unrealized loss for these securities as of June 30, 2009 was \$31.1 million. This unrealized loss is primarily attributable to the market illiquidity and volatility in the U.S. economy mentioned above and not specific to individual issuer credit. Except as noted below, the Company has recognized no other than temporary impairment losses.

The Company recognized \$14.8 million and \$33.3 million of other than temporary impairment losses substantially related to mortgage backed and corporate securities for the three and six months ended June 30, 2009, respectively. The 2009 OTTI represents the credit component of the changes in unrealized losses for impaired securities. The Company intends to hold these securities until there is a recovery in their value. The Company continues to monitor the value of these investments. Future events may result in further impairment of the Company s investments. The Company continues to monitor the value of these investments. Future events may result in further impairment of the Company s investments. The Company wrote down \$0.3 million of investments for other than temporary impairment losses for the three- and six-month periods ended June 30, 2008.

## 7. Significant Risk Management Activities

The Risk Oversight and Audit Committees of the Board of Directors oversees our risk management policies and procedures. Within the limits established by the board committees, specific risk policies and limits are set by the Portfolio Risk Management Committee, which includes members of senior management and senior Credit and Surveillance officers. As part of its risk management strategy, the Company may seek to obtain third party

38

#### **Table of Contents**

reinsurance or retrocessions and may also periodically enter into other arrangements to alleviate all or a portion of this risk.

Risk Management and Surveillance personnel are responsible for monitoring and reporting on all transactions in the insured portfolio, including exposures in both the Direct and Reinsurance segments. The primary objective of the surveillance process is to monitor trends and changes in transaction credit quality, detect any deterioration in credit quality, and recommend to management such remedial actions as may be necessary or appropriate. All transactions in the insured portfolio are risk rated, and surveillance personnel are responsible for adjusting those ratings to reflect changes in transaction credit quality. Surveillance personnel are also responsible for managing work-out and loss situations when necessary. For transactions where a loss is considered probable, surveillance personnel present analysis related to potential loss situations to a Reserve Committee. The Reserve Committee is made up of the Chief Executive Officer, Chief Financial Officer, President and Chief Operating Officer, Chief Actuary, Chief Surveillance Officer, General Counsel and Chief Accounting Officer. The Reserve Committee considers the information provided by surveillance personnel when setting reserves.

#### Direct Businesses

We conduct surveillance procedures to track risk aggregations and monitor performance of each risk. The review cycle and scope vary based upon transaction type and credit quality. In general, the review process includes the collection and analysis of information from various sources, including trustee and servicer reports, financial statements and reports, general industry or sector news and analyses, and rating agency reports. For Public Finance risks, the surveillance process includes monitoring general economic trends, developments with respect to state and municipal finances, and the financial situation of the issuers. For structured finance transactions, the surveillance process can include monitoring transaction performance data and cash flows, compliance with transaction terms and conditions, and evaluation of servicer or collateral manager performance and financial condition. Additionally, the Company uses various quantitative tools and models to assess transaction performance and identify situations where there may have been a change in credit quality. For all transactions, surveillance activities may include discussions with or site visits to issuers, servicers or other parties to a transaction.

#### Reinsurance Businesses

For transactions in the Company s Reinsurance segment, the primary insurers are responsible for conducting ongoing surveillance, and our surveillance personnel monitor the activities of the primary insurers through a variety of means, such as review of surveillance reports provided by the primary insurers, and meetings and discussions with their analysts. Our surveillance personnel take steps to ensure that the primary insurer is managing risk pursuant to the terms of the applicable reinsurance agreement. To this end, we conduct periodic reviews of ceding companies surveillance activities and capabilities. That process may include the review of the primary insurer s underwriting, surveillance, and claim files for certain transactions. In the event of credit deterioration of a particular exposure, more frequent reviews of the ceding company s risk mitigation activities are conducted. Our surveillance personnel also monitor general news and information, industry trends, and rating agency reports to help focus surveillance activities on sectors or credits of particular concern. For certain exposures, we also will undertake an independent analysis and remodeling of the transaction.

#### **Below Investment Grade Credits**

The Company s surveillance department is responsible for monitoring our portfolio of credits and maintains a list of below investment grade (BIG) credits. The BIG credits are divided into three categories:

- Category 1 (below investment grade credit with no expected losses);
- Category 2 (below investment grade credit with a loss reserve established prior to an event of default);
- Category 3 (below investment grade credit with a loss reserve established and where an event of default has occurred or is imminent).

The BIG credit list includes all credits rated lower than BBB- where there is a material amount of exposure (generally greater than \$10.0 million) or a material risk of the Company incurring a loss greater than \$0.5 million. Credit ratings are based on the Company s internal assessment of the likelihood of default. The Company s internal credit ratings are generally in line or lower than those of the ratings agencies.

39

### Table of Contents

As part of our surveillance process, we continually monitor all of our investment grade credits to determine whether they have suffered any credit impairments. Our quarterly procedures included qualitative and quantitative analysis on all of our insured credits to ensure that all potential BIG credits have been identified. Credits we identified through this process as having future credit impairments are subjected to further review by surveillance personnel to ensure that they have an appropriate ratings assigned to them.

The following table provides financial guaranty net par outstanding by BIG category as of June 30, 2009 (dollars in millions):

|   |     |         |    | BIG (     | Credits | 8         |               |

The Company s loss adjustment expense reserves for mitigating claim liabilities were \$1.7 million as of June 30, 2009.

In accordance with FAS 163, the above table includes financial guaranty contracts written in insurance form. It does not include financial guaranty contracts written in CDS form, mortgage guaranty insurance or the Company s other lines of insurance.

The Company used weighted-average risk free discount rate of 2.3% to discount reserves for loss and loss adjustment expenses.

#### Overview of Significant Risk Management Activities

The Company insures various types of residential mortgage backed securitizations (RMBS). Such transactions may include obligations backed by closed-end first mortgage loans and closed and open-end second mortgage loans or home equity loans on one-to-four family residential properties, including condominiums and cooperative apartments. An RMBS transaction where the underlying collateral is comprised of revolving home equity lines of credit is generally referred to as a HELOC transaction. In general, the collateral supporting HELOC

securitizations are second lien loans made to prime borrowers. As of June 30, 2009, Company had net par outstanding of \$1.5 billion related to HELOC securitizations, of which \$1.1 billion were written in the Company s financial guaranty direct segment. As of June 30, 2009, of the \$1.5 billion related to HELOC securitizations, the Company had net par outstanding of \$1.3 billion for transactions with Countrywide, of which \$1.0 billion were written in the Company s financial guaranty direct segment ( direct Countrywide transactions or Countrywide 2005-J and Countrywide 2007-D ). As of December 31, 2008, the Company had net par outstanding of \$1.7 billion related to HELOC securitizations, of which \$1.5 billion were transactions with Countrywide.

The performance of our HELOC exposures deteriorated during 2007 and 2008 and the first six months of 2009 and transactions, particularly those originated in the period from 2005 through 2007, continue to perform below

### Table of Contents

our original underwriting expectations. In accordance with our standard practices, during Second Quarter 2009 and Six Months 2009, the Company evaluated the most currently available information, including trends in delinquencies and charge-offs on the underlying loans, draw rates on the lines of credit, and the servicer s ability to fulfill its contractual obligations including its obligation to fund additional draws. The key assumptions used in our analysis of potential case loss reserves on the direct Countrywide transactions are presented in the following table:

| Key Variables                      |  |
|------------------------------------|--|
| Constant payment rate (CPR)        | 3-month average, 6.83 10.92% as of June 30, 2009   |
| Constant default rate (CDR)        | 6-month average CDR of approximately 17 21% used for our initial default projections, ramping down to a steady state CDR of 1.0% |
| Draw rate                          | 3-month average, 0.76 1% as of June 30, 2009   |
| Excess spread                      | 250 bps per annum  |
| Repurchases of Ineligible loans by | \$195.0 million; or approximately 8.1% of  |
| Countrywide                        | original pool balance of \$2.4 billion   |
| Loss Severity                      | 100%   |

In recent periods, CDR, CPR, Draw Rates and delinquency percentages have fluctuated within ranges that we believe make it appropriate to use rolling averages to project future performance. Accordingly, the Company is using modeling assumptions that are based upon or which approximate recent actual historical performance to project future performance and potential losses. In the Second Quarter 2009 and Six Months 2009, consistent with FAS 163, the Company modeled and probability weighted a variety of potential time periods over which an elevated CDR may potentially occur. Further, the Company also incorporated in its loss reserve estimates the possibility that in some of those scenarios the prepayment rates increase after the stressed CDR period, leading to lower recoveries through excess spread. The Company continues to model sensitivities around the results booked using a variety of CDR rates and stress periods as well as other modeling approaches including roll rates and hybrid roll rate/CDR methods. Additionally, the Company continues to perform a detailed review of the performing and non-performing loans in the securitizations to determine their compliance with the originators stated underwriting criteria.

As a result of this modeling and analysis, the Company incurred loss and loss adjustment expenses of \$0.5 million and \$(4.4) million for its direct Countrywide transactions during Second Quarter 2009 and Six Months 2009, respectively. The Company is cumulative incurred loss and loss adjustment expenses on the direct Countrywide transactions as of June 30, 2009 were \$93.8 million (\$73.0 million after-tax). During 2009, the Company paid losses and loss adjustment expenses for its direct Countrywide transactions of \$83.6 million, compared to \$65.4 million paid during 2008. The Company is cumulative paid losses and loss adjustment expenses for its direct Countrywide transactions are \$253.6 million as of June 30, 2009. The Company expects to recover a significant amount of these paid losses through excess spread from future cash flows as well as funding of future draws and recoverables from breaches of representations and warranties with respect to the underlying collateral inappropriately included in the pool by the originator. The excess of paid losses and loss adjustment expenses over expected losses, including amounts related to these recoveries above, results in a net recovery of \$159.7 million, which is included in salvage recoverable on the balance sheet as of June 30, 2009.

For the three months ended June 30, 2009, the Company incurred loss and loss adjustment expenses of \$18.7 million for its HELOC exposures. Of this amount, \$2.5 million related to the Company s financial guaranty direct segment. The remaining \$16.2 million of incurred loss and loss adjustment expenses related to the Company s assumed HELOC exposures in its financial guaranty reinsurance segment.

For the six months ended June 30, 2009, the Company incurred loss and loss adjustment expenses of \$37.4 million for its HELOC exposures. Of this amount, \$2.4 million related to the Company s financial guaranty direct segment. The remaining \$34.9 million of incurred loss and loss adjustment expenses related to the Company s assumed HELOC exposures in its financial guaranty reinsurance segment.

The ultimate performance of the Company s HELOC transactions will depend on many factors, such as the level and timing of loan defaults, interest proceeds generated by the securitized loans, repayment speeds and changes in home prices, as well as the levels of credit support built into each transaction. Other factors also may have a material

41

### Table of Contents

impact upon the ultimate performance of each transaction, including the ability of the seller and servicer to fulfill all of their contractual obligations including its obligation to fund future draws on lines of credit as well as the amount of benefit received from repurchases of ineligible loans by Countrywide. The variables affecting transaction performance are interrelated, difficult to predict and subject to considerable volatility. If actual results differ materially from any of our assumptions, the losses incurred could be materially different from our estimate. We continue to update our evaluation of these exposures as new information becomes available.

A summary of the Company s exposure to these two transactions and their actual performance statistics through June 30, 2009 are as follows:

#### (\$ in millions)

|  | Countrywide 2005J | Countrywide 20 | 007D   |
|--|-------------------|----------------|--------|
| Original principal balance                             | \$<br>1,500       | \$             | 900    |
| Remaining principal balance                            | \$<br>461.0       | \$             | 527.5  |
| Cumulative losses (% of original principal balance)(1) | 13.7%             |                | 21.2%  |
| Total delinquencies (% of current balance)(2)          | 19.2%             |                | 15.2%  |
| Average initial FICO score of borrowers(3)             | 709               |                | 712    |
| Interest margin over prime(4)                          | 2.0%              |                | 1.8%   |
| Revolving period(5)                                    | 10                |                | 10     |
| Repayment period(6)                                    | 15                |                | 15     |
| Average draw rate(7)                                   | 1.0%              |                | 0.8%   |
| Average constant payment rate(8)                       | 6.8%              |                | 10.9%  |
| Excess spread(9)                                       | 286bps            | 3              | 275bps |
| Expected collateral loss(10)                           | 20.4%             |                | 36.0%  |

- (1) Cumulative collateral losses expressed as a percentage of the original deal balance.
- (2) Total delinquencies (includes bankruptcies, foreclosures and real estate owned by Countrywide) as a percentage of the current deal balance.
- (3) Fair Isaacs and Company score is a measurement designed to indicate the credit quality of a borrower.
- (4) Floating rate charged to borrowers above the prime rate.
- (5) Time period (usually 5-10 years) in which the borrower may draw funds from their HELOC.
- (6) Time period (usually 10-20 years) in which the borrower must repay the funds withdrawn from the HELOC.
- (7) Represents the three-month average draw rate as of June 2009.
- (8) Represents the three-month average constant payment rate as of June 2009.
- (9) Excess spread during June 2009.
- (10) Calculated using a weighted average basis.

Another type of RMBS transaction is generally referred to as Subprime RMBS. The collateral supporting such transactions is comprised of first-lien residential mortgage loans made to subprime borrowers. A subprime borrower is one considered to be a higher risk credit based on credit scores or other risk characteristics. As of June 30, 2009, we had net par outstanding of \$918 million related to Subprime RMBS securitizations, of which \$201 million is classified by us as Below Investment Grade risk. Of the total U.S. Subprime RMBS exposure of \$918 million, \$430 million is from transactions issued in the period from 2005 through 2007 and written in our direct financial guaranty segment. As of June 30, 2009, we had case reserves of \$14.3 million related to our \$918 million U.S. Subprime RMBS exposure, of which \$3.7 million were related to our \$430 million exposure in the direct financial guaranty segment for transactions issued from 2005 through 2007.

The problems affecting the subprime mortgage market have been widely reported, with rising delinquencies, defaults and foreclosures negatively impacting the performance of Subprime RMBS transactions. Those concerns relate primarily to Subprime RMBS issued in the period from 2005 through 2007. The \$430 million exposure that we have to such transactions in our direct financial guaranty segment benefits from various structural protections, including credit enhancement that on average currently equals approximately 42% of the remaining principal balance of the transactions.

We also have exposure of \$380 million to Closed-End Second (CES) RMBS transactions, of which \$371 million is in the direct segmeffile collateral supporting such transactions is comprised of second-lien residential mortgage loans that generally accrue interest at a fixed rate and can be amortized for periods usually up to 15 years; at the end of a loan's term, a balloon payment is typically due. As with other types of RMBS, we have seen significant deterioration in the performance of our CES transactions. On four transactions that had exposure of \$320 million, as of June 30, 2009, we have seen a significant increase in delinquencies and collateral losses, which resulted in erosion of the Company s

### Table of Contents

credit enhancement and the payment of claims totaling \$24.0 million. Based on the Company s analysis of these transaction and their projected collateral losses, the Company had case reserves of \$36.4 million as of June 30, 2009.

Another type of RMBS transaction is generally referred to as Alt-A RMBS. The collateral supporting such transactions is comprised of first-lien residential mortgage loans made to prime quality borrowers that lack certain ancillary characteristics that would make them prime. Included in this category is Alt-A Option ARMs, which include transactions where 66% or more of the collateral is comprised of mortgage loans that have the potential to negatively amortize. As of June 30, 2009, the Company had net par outstanding of \$1.4 billion related to Alt-A RMBS securitizations. Of that amount, \$1.3 billion is from transactions issued in the period from 2005 through 2007 and written in the Company s financial guaranty direct segment. As of June 30, 2009, the Company had case reserves of \$16.2 million for Alt-A and \$19.3 million for Option-ARM related to its \$1.4 billion Alt-A/Option ARM RMBS exposure, in the financial guaranty direct and reinsurance segments.

The ultimate performance of the Company s RMBS transactions remains highly uncertain and may be subject to considerable volatility due to the influence of many factors, including the level and timing of loan defaults, changes in housing prices and other variables. The Company will continue to monitor the performance of its RMBS exposures and will adjust the risk ratings of those transactions based on actual performance and management s estimates of future performance.

The Company has exposure on two life insurance reserve securitization transactions based on two discrete blocks of individual life insurance business reinsured by Scottish Re (U.S.) Inc. (Scottish Re ). The two transactions relate to Ballantyne Re p.l.c. (Ballantyne ) (gross exposure of \$500 million) and Orkney Re II, p.l.c. (Orkney II) (gross exposure of \$423 million). Under both transactions, monies raised through the issuance of the insured notes support present and future U.S. statutory life insurance reserve requirements. The monies were invested at inception of each transaction in accounts managed by a large, well-known investment manager. However, those investment accounts have incurred substantial mark-to-market losses since mid-year 2007, principally as a result of their exposure to subprime and Alt-A RMBS transactions. Largely as a result of these mark-to-market losses, both we and the rating agencies have downgraded our exposure to both Ballantyne and Orkney II to below investment grade. As regards the Ballantyne transaction, the Company is working with the directing guarantor, who has insured exposure of \$900 million, to remediate the risk. On the Orkney Re II transaction, the Company, as the directing financial guarantor, is taking remedial action. There can be no assurance that any such remedial action will be effective.

Some credit losses have been realized on the securities in the Ballantyne and Orkney Re II portfolios and significant additional credit losses are expected to occur. Performance of the underlying blocks of life insurance business thus far generally has been in accordance with expectations. Adverse investment experience has led the Company to fund interest shortfalls which, except under its most severe loss projections, it expects to be repaid. Additionally, the transactions also contain features linked to the market values of the invested assets, reserve funding requirements on the underlying blocks of life insurance business, and minimum capital requirements for the transactions themselves that may trigger a shut off of interest payments to the insured notes and thereby result in claim payments by the Company.

Another key risk is that the occurrence of certain events may result in a situation where either Ballantyne and/or Orkney Re II are required to sell assets and potentially realize substantial investment losses and for Assured Guaranty Ltd. to incur corresponding insured losses ahead of the scheduled final maturity date. For example, cedants to Scottish Re may have the right to recapture blocks of life insurance business which Scottish Re has ceded to Orkney Re II. Such recaptures could require Orkney Re II to sell assets and realize investment losses. In the Ballantyne transaction, further declines in the market value of the invested assets and/or an increase in the reserve funding requirements could lead to a similar mandatory realization of investment losses and for Assured Guaranty Ltd. to incur corresponding insured losses ahead of the scheduled final maturity date.

In order for the Company to incur an ultimate net loss on these transactions, adverse experience on the underlying block of life insurance policies and/or credit losses in the investment portfolio would need to exceed the level of credit enhancement built into the transaction structures. Based on its analysis of the information currently available, including estimates of future investment performance, projected credit impairments on the invested assets

### Table of Contents

and performance of the blocks of life insurance business at June 30, 2009, the Company s case reserve is now \$30.9 million for the Ballantyne transaction. The Company has not established a case loss reserve for the Orkney Re II transaction due to the fact that modeled loss scenarios project sufficient cash flows from the investment and life insurance activities so that the Company does not suffer an ultimate loss in excess of its unearned premium reserve as of June 30, 2009.

On December 19, 2008, the Company sued J.P. Morgan Investment Management Inc. ( JPMIM ), the investment manager in the Orkney II transaction, in New York Supreme Court alleging that JPMIM engaged in breaches of fiduciary duty, gross negligence and breaches of contract based upon its handling of the investments of Orkney Re II. On May 13, 2009, the Company filed a First Amended Complaint, additionally asserting the same claims in the name of Orkney II. JPMIM has filed a motion to dismiss the First Amended Complaint. The court has not yet acted upon the motion.

The Company has exposure to a public finance transaction for sewer service in Jefferson County, Alabama through several reinsurance treaties. The Company s total exposure to this transaction is approximately \$455 million as of June 30, 2009. The Company has made debt service payments during the year and expects to make additional payments in the near term. Through our cedants, the Company is currently in discussions with the bond issuer to structure a solution, which may result in some or all of these payments being recoverable. The Company s loss and loss adjustment expense reserve as of June 30, 2009 is \$0.9 million and the Company has incurred cumulative loss and loss adjustment expenses of \$26.3 million through June 30, 2009.

#### 8. Analysis of premiums written, premiums earned and loss and loss adjustment expenses

The Company enters into reinsurance agreements with non-affiliated companies to limit its exposure to risk on an on-going basis. In the event that any or all of the reinsurers are unable to meet their obligations, the Company would be liable for such defaulted amounts. Direct, assumed, and ceded premium and loss and loss adjustment expense amounts for three and six months ended June 30, 2009 and 2008 were as follows:

|                                   | Three M<br>J  | Ionth<br>une 30 | ed            |         |                  | Six Mo<br>J | onths l<br>une 30 | ed            |

Total net written premiums for Second Quarter 2009 and Six Months 2009 were \$142.0 million and \$376.8 million, respectively, compared with \$240.7 million and \$410.4 million for Second Quarter 2008 and Six Months 2008, respectively.

### Table of Contents

Direct written premiums decreased \$60.2 million in Second Quarter 2009 compared with Second Quarter 2008 primarily attributable to our U.S. public finance business, which generated \$120.9 million of direct written premium in Second Quarter 2009 compared with \$183.2 million during Second Quarter 2008. Partially offsetting this decrease was a \$3.4 million increase in U.S. structured finance business premium. Direct written premiums decreased \$66.5 million in Six Months 2009 compared with Six Months 2008 primarily due to a \$47.2 million decrease in U.S. public finance business. Additionally, there was a reduction of our U.S. structured finance and international business of \$9.3 million and \$10.0 million for Six Months 2009 compared with Six Months 2008, as a result of changes in market conditions.

Assumed written premiums decreased to \$3.5 million in Second Quarter 2009 compared with \$48.0 million in Second Quarter 2008, as the prior year included large facultative cessions, mainly as a result of a portfolio assumption of \$14.8 million in premium from one of our cedants. We did not have any portfolio assumptions in Second Quarter 2009.

Total net premiums earned for Second Quarter 2009 were \$78.6 million compared with \$51.7 million for Second Quarter 2008, while net premiums earned for Six Months 2009 were \$227.1 million compared with \$98.5 million for Six Months 2008.

Direct earned premiums increased \$9.2 million, to \$30.9 million for Second Quarter 2009 compared with \$21.7 million for Second Quarter 2008, reflecting the continued growth of our direct book of business. Direct earned premiums increased \$97.7 million to \$137.3 million for Six Months 2009 compared with \$39.6 million for Second Quarter 2008. This increase is principally attributable to accelerated premiums earned of \$73.6 million during the three months ended March 31, 2009 resulting from early contract terminations in the financial guaranty direct segment and to the continued growth of the Company s in-force book of business. Second Quarter 2009 and Six Months earned premiums include \$5.5 million and \$10.8 million, respectively, related to the accretion of discount on future financial guaranty installment premiums as the result of the implementation of FAS 163 effective January 1, 2009. The Second Quarter 2009, Six Months 2009, Second Quarter 2008 and Six Months 2008 did not have any direct earned premiums from public finance refundings. Public finance refundings reflect the unscheduled pre-payment or refundings of underlying municipal bonds. Also contributing to the Company s increase in net premiums earned was the financial guaranty reinsurance segment, which increased \$17.8 million in Second Quarter 2009 compared to Second Quarter 2008. This increase was mainly due to an increase in refundings of \$6.2 million, as well as \$11.8 million of accelerated premiums earned related to an assumed exposure that was extinguished. Offsetting these increases were decreases of \$0.5 million and \$1.5 million for the three- and six-month periods ended June 30, 2009, respectively, in net premiums earned in the mortgage segment due to run-off.

Assumed premiums earned increased \$31.4 million (\$0.9 million decrease excluding refundings) in Six Months 2009 compared with Six Months 2008 primarily due to \$6.5 million generated in Six Months 2009 from the portfolio assumed from CIFG in January 2009.

Total loss and loss adjustment expenses were \$38.0 million and \$38.1 million for Second Quarter 2009 and Second Quarter 2008, respectively. Second Quarter 2009 loss and LAE was primarily related to reserve increase for RMBS transactions in both the financial guaranty direct and reinsurance segments. Second Quarter 2008 included an increase in case reserves in the financial guaranty direct segment of \$31.2 million, related to the Company s CES and HELOC exposures. Additionally, loss and loss adjustment expenses in the financial guaranty reinsurance segment were \$11.3 million, including a \$7.7 million increase in case reserves and \$9.9 million of paid losses related predominantly to our HELOC exposures. The Second Quarter 2008 also included a decrease in portfolio reserves of \$5.9 million, associated with exposures where a case reserve was established.

Total loss and LAE were \$117.8 million and \$93.3 million for Six Months 2009 and Six Months 2008, respectively. Loss and LAE for Six Months 2009 was primarily related to reserve increase for RMBS transactions in both the financial guaranty direct and reinsurance segments. In addition to Second Quarter 2008 activity, assumed loss and LAE for Six Months 2008 in the financial guaranty direct segment included an

increase in portfolio reserves of \$35.7 million mainly attributable to our HELOC and other RMBS exposures driven by internal ratings downgrades. In the financial guaranty reinsurance segment, Six Months 2008 included the Second Quarter 2008 activity discussed above, as well as increases to case and portfolio reserves of \$9.7 million and \$7.4 million, respectively, mainly related to our U.S. RMBS and HELOC exposures.

### Table of Contents

To limit its exposure on assumed risks, the Company entered into certain proportional and non-proportional retrocessional agreements with other insurance companies, primarily subsidiaries of ACE Limited ( ACE ), the Company s former parent, to cede a portion of the risk underwritten by the Company, prior to the IPO. In addition, the Company enters into reinsurance agreements with non-affiliated companies to limit its exposure to risk on an on-going basis.

Reinsurance recoverable on ceded losses and LAE as of June 30, 2009 and December 31, 2008 were \$4.5 million and \$6.5 million, respectively and are mainly related to the Company s other segment. In the event that any or all of the reinsurers are unable to meet their obligations, the Company would be liable for such defaulted amounts.

Agreement with CIFG Assurance North America, Inc.

AGC entered into an agreement with CIFG Assurance North America, Inc. ( CIFG ) to assume a diversified portfolio of financial guaranty contracts totaling approximately \$13.3 billion of net par outstanding. The Company closed the transaction in January 2009 and received \$75.6 million (\$85.7 million of upfront premiums net of ceding commissions) and will receive approximately \$12.2 million of future installments premiums.

#### 9. Commitments and Contingencies

#### Litigation

In the ordinary course of their respective businesses, certain of the Company s subsidiaries assert claims in legal proceedings against third parties to recover losses paid in prior periods. The amounts, if any, the Company will recover in these proceedings are uncertain, although recoveries in any one or more of these proceedings during any quarter or fiscal year could be material to the Company s results of operations in that particular quarter or fiscal year.

It is the opinion of the Company s management, based upon the information available, that the expected outcome of litigation against the Company, individually or in the aggregate, will not have a material adverse effect on the Company s financial position or liquidity, although an adverse resolution of litigation against the Company could have a material adverse effect on the Company s results of operations in a particular quarter or fiscal year.

#### Litigation Involving Assured Guaranty Mortgage Insurance Company

Effective January 1, 2004, Assured Guaranty Mortgage Insurance Company ( AGMIC ) reinsured a private mortgage insurer (the Reinsured ) under a Mortgage Insurance Stop Loss Excess of Loss Reinsurance Agreement (the Agreement ). Under the Agreement, AGMIC agreed to cover

the Reinsured s aggregate mortgage guaranty insurance losses in excess of a \$25 million retention and subject to a \$95 million limit. Coverage under the Agreement was triggered only when the Reinsured s: (1) combined loss ratio exceeded 100%; and (2) risk to capital ratio exceeded 25 to 1, according to insurance statutory accounting. In April 2008, AGMIC notified the Reinsured it was terminating the Agreement because of the Reinsured s breach of the terms of the Agreement. This matter went to arbitration and on June 4, 2009, the arbitration panel issued a Final Interim Award with respect to this Agreement in which the majority of the panel concluded that the Reinsured breached a covenant in the Agreement. AGMIC and the Reinsured executed a final settlement agreement on June 17, 2009 to settle the matter in full in exchange for a payment by AGMIC to the reinsured of \$10 million. The final settlement agreement resolves all disputes between the parties and concludes all remaining rights and obligations of the parties under the Agreement.

#### Litigation Involving FSAH and its Subsidiaries

As noted above, on July 1, 2009 the Company completed the acquisition of FSAH pursuant to the purchase agreement, dated as of November 14, 2008, between the Company, Dexia Holdings and DCL. FSAH is the parent of FSA.

The following is a description of legal proceedings involving FSAH and its subsidiaries. Although the Company did not acquire FSAH s former financial products business, which included FSAH s former guaranteed investment contract business and medium-term note and leveraged tax lease businesses, certain legal proceedings relating to those businesses are against entities which the Company did acquire. Pursuant to an indemnification agreement entered into among FSA, DCL and Dexia in connection with the acquisition of FSAH, each of DCL and Dexia, jointly and severally, has agreed to indemnify FSA and its affiliates against any liability arising out of the proceedings described under Proceedings Related to FSAH s Former Financial Products Business below.

### Table of Contents

FSAH and FSA have received various regulatory inquiries and requests for information regarding a variety of subjects. These include (i) subpoenas duces tecum and interrogatories from the State of Connecticut Attorney General and the Attorney General of the State of California related to antitrust concerns associated with the methodologies used by rating agencies for determining the credit rating of municipal debt, including a proposal by Moody s to assign corporate equivalent ratings to municipal obligations, and the their communications with rating agencies and (ii) subpoenas duces tecum and interrogatories from the Attorney General of the States of Connecticut and West Virginia and antitrust civil investigative demands from the Attorney General of the State of Florida relating to their investigations of alleged bid rigging of municipal GICs. FSAH has satisfied or is in the process of satisfying such requests. FSAH may receive additional inquiries from these or other regulators and expects to provide additional information to such regulators regarding their inquiries in the future.

#### Proceedings Related to FSAH s Former Financial Products Business

In November 2006, (i) FSAH received a subpoena from the Antitrust Division of the DOJ issued in connection with an ongoing criminal investigation of bid rigging of awards of municipal GICs and other municipal derivatives and (ii) FSA received a subpoena from the SEC related to an ongoing industry-wide investigation concerning the bidding of municipal GICs and other municipal derivatives. Pursuant to the subpoenas FSAH has furnished to the DOJ and SEC records and other information with respect to FSAH s municipal GIC business. On February 4, 2008, FSAH received a Wells Notice from the staff of the Philadelphia Regional Office of the SEC relating to the foregoing matter. The Wells Notice indicates that the SEC staff is considering recommending that the SEC authorize the staff to bring a civil injunctive action and/or institute administrative proceedings against FSAH, alleging violations of Section 10(b) of the Exchange Act and Rule 10b-5 thereunder and Section 17(a) of the Securities Act. FSAH has had ongoing discussions with the DOJ and the SEC. The ultimate loss that may arise from these investigations remains uncertain.

During 2008 nine putative class action lawsuits were filed in federal court alleging federal antitrust violations in the municipal derivatives industry, seeking damages and alleging, among other things, a conspiracy to fix the pricing of, and manipulate bids for, municipal derivatives, including GICs. These cases have been coordinated and consolidated for pretrial proceedings in the U.S. District Court for the Southern District of New York as MDL 1950, In re Municipal Derivatives Antitrust Litigation, Case No. 1:08-cv-2516 (MDL 1950). Five of these cases name both FSAH and FSA: (a) Hinds County, Mississippi v. Wachovia Bank, N.A. (filed on or about March 13, 2008); (b) Fairfax County, Virginia v. Wachovia Bank, N.A. (filed on or about March 12, 2008); (c) Central Bucks School District, Pennsylvania v. Wachovia Bank N.A. (filed on or about June 4, 2008); (d) Mayor & City Counsel of Baltimore, Maryland v. Wachovia Bank N.A. (filed on or about July 3, 2008); and (e) Washington County, Tennessee v. Wachovia Bank N.A. (filed on or about July 14, 2008). Four of the cases name only FSAH and also allege that the defendants violated state antitrust law and common law by engaging in illegal bid-rigging and market allocation, thereby depriving the cities of competition in the awarding of GICs and ultimately resulting in the cities paying higher fees for these products: (a) City of Oakland, California, v. AIG Financial Products Corp. (filed on or about July 8, 2008); (c) City of Fresno, California v. AIG Financial Products Corp. (filed on or about July 8, 2008); (c) City of Fresno, California v. AIG Financial Products Corp. (filed on or about July 17, 2008); and (d) Fresno County Financing Authority v. AIG Financial Products Corp. (filed on or about December 24, 2008).

The MDL 1950 court has determined that it will handle federal claims alleged in the consolidated class action complaint before addressing state claims. In April 2009, the MDL 1950 court granted the defendants motion to dismiss on the federal claims, but granted leave for the plaintiffs to file a second amended complaint. On June 18, 2009, interim lead plaintiffs counsel filed a Second Consolidated Amended Class Action Complaint. The complaints in these lawsuits generally seek unspecified monetary damages, interest, attorneys fees and other costs. The Company cannot reasonably estimate the possible loss or range of loss that may arise from these lawsuits; although the Second Consolidated Amended Class Action Complaint currently describes some of FSAH s and FSA s activities, it does not name those entities as defendants.

FSAH and FSA also are named in five non-class action lawsuits originally filed in the California Superior Courts alleging violations of California law related to the municipal derivatives industry:

(a) City of Los Angeles v. Bank of America, N.A. (filed on or about July 23, 2008 in the Superior Court of the State of California in and for the County of Los Angeles, Case No. BC 394944, removed to the U.S. District Court for the Central District of California (C.D. Cal.) as Case No. 2:08-cv-5574, transferred to S.D.N.Y. as Case No. 1:08-cv-10351);

47

### Table of Contents

- (b) City of Stockton v. Bank of America, N.A. (filed on or about July 23, 2008 in the Superior Court of the State of California in and for the County of San Francisco, Case No. CGC-08-477851, removed to the N.D. Cal. as Case No. 3:08-cv-4060, transferred to S.D.N.Y. as Case No. 1:08-cv-10350);
- (c) County of San Diego v. Bank of America, N.A. (filed on or about August 28, 2008 in the Superior Court of the State of California in and for the County of Los Angeles, Case No. SC 99566, removed to C.D. Cal. as Case No. 2:08-cv-6283, transferred to S.D.N.Y. as Case No. 1:09-cv-1195);
- (d) County of San Mateo v. Bank of America, N.A. (filed on or about October 7, 2008 in the Superior Court of the State of California in and for the County of San Francisco, Case No. CGC-08-480664, removed to N.D. Cal. as Case No. 3:08-cv-4751, transferred to S.D.N.Y. as Case No. 1:09-cv-1196); and
- (e) County of Contra Costa v. Bank of America, N.A. (filed on or about October 8, 2008 in the Superior Court of the State of California in and for the County of San Francisco, Case No. CGC-08-480733, removed to N.D. Cal. as Case No. 3:08-cv-4752, transferred to S.D.N.Y. as Case No. 1:09-cv-1197).

These cases have been transferred to the S.D.N.Y. and consolidated with *MDL 1950* for pretrial proceedings. The complaints in these lawsuits generally seek unspecified monetary damages, interest, attorneys fees, costs and other expenses. The Company cannot reasonably estimate the possible loss or range of loss that may arise from these lawsuits.

#### Proceedings Relating to FSAH s Financial Guaranty Business

In December 2008 and January 2009, FSA and various other financial guarantors were named in three complaints filed in the Superior Court, San Francisco County: (a) *City of Los Angeles Department of Water and Power v. Ambac Financial Group et. al* (filed on or about December 31, 2008), Case No. CG-08-483689; *Sacramento Municipal Utility District v. Ambac Financial Group et. al* (filed on or about December 31, 2008), Case No. CGC-08-483691; and (c) *City of Sacramento v. Ambac Financial Group Inc. et. al* (filed on or about January 6, 2009), Case No. CGC-09-483862. These complaints alleged participation in a conspiracy in violation of California s antitrust laws to maintain a dual credit rating scale that misstated the credit default risk of municipal bond issuers and created market demand for municipal bond insurance and participation in risky financial transactions in other lines of business that damaged each bond insurer s financial condition (thereby undermining the value of each of their guaranties), and a failure to adequately disclose the impact of those transactions on their financial condition. These latter allegations form the predicate for five separate causes of action against each of the Insurers: breach of contract, breach of the covenant of good faith and fair dealing, fraud, negligence, and negligent misrepresentation. The complaints in these lawsuits generally seek unspecified monetary damages, interest, attorneys fees, costs and other expenses. The Company cannot reasonably estimate the possible loss or range of loss that may arise from these lawsuits.

In August 2008 a number of financial institutions and other parties, including FSA, were named as defendants in a civil action brought in the circuit court of Jefferson County, Alabama relating to the County s problems meeting its debt obligations on its \$3.2 billion sewer debt: *Charles E. Wilson vs. JPMorgan Chase & Co et al* (filed on or about August 8, 2008 in the Circuit Court of Jefferson County, Alabama), Case No. 01-CV-2008-901907.00, a putative class action. The action was brought on behalf of rate payers, tax payers and citizens residing in

Jefferson County, and alleges conspiracy and fraud in connection with the issuance of the County s debt. The complaint in this lawsuit seeks unspecified monetary damages, interest, attorneys fees and other costs. The Company cannot reasonably estimate the possible loss or range of loss that may arise from this lawsuit.

#### Real Estate Lease

The Company and its subsidiaries are party to various lease agreements. In June 2008, the Company s subsidiary, AGC, entered into a new five-year lease agreement for New York office space. Future minimum annual payments of \$5.3 million for the first twelve month period and \$5.7 million for subsequent twelve month periods commenced October 1, 2008 and are subject to escalation in building operating costs and real estate taxes. As a result of the FSAH acquisition, during Second Quarter 2009 the Company decided not to occupy the office space described above and subleased it to two tenants for total minimum annual payments of approximately \$3.7 million until October 2013 . AGC wrote off related leasehold improvements and recorded a pre-tax loss on the sublease of \$11.7 million,

48

### Table of Contents

which is included in FSAH acquisition-related expenses and other liabilities in the unaudited consolidated income statements and balance sheets, respectively.

#### Reinsurance

The Company is party to reinsurance agreements with other monoline financial guaranty insurance companies. The Company s facultative and treaty agreements are generally subject to termination (i) upon written notice (ranging from 90 to 120 days) prior to the specified deadline for renewal, (ii) at the option of the primary insurer if the Company fails to maintain certain financial, regulatory and rating agency criteria which are equivalent to or more stringent than those the Company is otherwise required to maintain for its own compliance with state mandated insurance laws and to maintain a specified financial strength rating for the particular insurance subsidiary or (iii) upon certain changes of control of the Company. Upon termination under the conditions set forth in (ii) and (iii) above, the Company may be required (under some of its reinsurance agreements) to return to the primary insurer all statutory unearned premiums, less ceding commissions, attributable to reinsurance ceded pursuant to such agreements after which the Company would be released from liability with respect to the ceded business. Upon the occurrence of the conditions set forth in (ii) above, whether or not an agreement is terminated, the Company may be required to obtain a letter of credit or alternative form of security to collateralize its obligation to perform under such agreement or it may be obligated to increase the level of ceding commission paid.

#### 10. Long-Term Debt and Credit Facilities

The carrying value of long-term debt was as follows:

|  |     | As          | of  |                |
|--|-----|-------------|-----|----------------|
| (dollars in millions)                            | Jur | ne 30, 2009 | Dec | ember 31, 2008 |
| 7.0% Senior Notes                                | \$  | 197,461     | \$  | 197,443        |
| 8.50% Senior Notes                               |     | 169,732     |     |                |
| Series A Enhanced Junior Subordinated Debentures |     | 149,781     |     | 149,767        |
| Total long-term debt                             | \$  | 516,974     | \$  | 347,210        |

The Company s unaudited interim consolidated financial statements include long-term debt and related interest expense, which was used to fund the Company s insurance operations and acquisition of FSAH on July 1, 2009, as described below.

#### 7.0% Senior Notes

AGUS issued \$200.0 million of 7.0% Senior Notes due 2034 for net proceeds of \$197.3 million. The proceeds of the offering were used to repay substantially all of a \$200.0 million promissory note issued to a subsidiary of ACE in April 2004 as part of the IPO-related formation transactions. The coupon on the Senior Notes is 7.0%, however, the effective rate is approximately 6.4%, taking into account the effect of a cash flow hedge executed by the Company in March 2004, the term of which matches that of the Senior Notes. The Company recorded interest

expense of \$3.3 million, including \$0.2 million of amortized gain on the cash flow hedge, for both Second Quarter 2009 and Second Quarter 2008. The Company recorded interest expense of \$6.7 million, including \$0.3 million of amortized gain on the cash flow hedge, for both Six Months 2009 and Six Months 2008. These Senior Notes are fully and unconditionally guaranteed by Assured Guaranty Ltd.

8.50% Senior Notes

On June 24, 2009, the Company along with its wholly-owned subsidiary, AGUS, issued 3,450,000 Equity Units for gross proceeds of \$172.5 million in a publicly registered offering. Each Equity Unit consists of (i) a purchase contract (the Purchase Contract) requiring the counterparty to purchase from the Company for \$50 between 3.8685 and 4.5455 common shares of Assured Guaranty Ltd. on June 1, 2012, the actual number of shares to be determined based on the average closing price of the Assured Guaranty Ltd s common shares over the 20-trading day period ending three trading days prior to June 1, 2012 and (ii) notes (the Notes) issued by AGUS, initially bearing interest at a rate of 8.50% per annum, payable quarterly, maturing on June 1, 2014, subject to a

| Table of Contents |  |  |
|-------------------|--|--|

mandatory remarketing in which the rate of interest, periodicity of payments, maturity date and certain other terms may be modified.

The purchase price was allocated between the Notes and the Purchase Contracts based on their relative fair values as of the offering date. The fair value of the Notes and the Purchase Contracts was determined to be \$49.19 (per 1/20th ownership interest) and \$0.81, respectively at the date of issuance. The allocation was based on the determination that a new-issue, three-year senior debt would be priced at par if it yielded 9.13%,

#### The Notes

- Face Amount of the Notes: Each Note has a face amount of \$1,000 and each Equity Unit represents a 1/20th ownership interest in a \$1,000 face amount Note plus an obligation under the Purchase Contract as described more fully below,
- **Interest Rate on the Notes:** Each Note initially bears interest at a rate of 8.50% per annum on the face amount, payable quarterly, and subject to reset upon a successful remarketing,
- Remarketing of the Notes: The Notes are required to be remarketed on a date chosen by the Company occurring after December 1, 2011 and prior to May 1, 2012 (or if not remarketed during this period, then the Notes will be remarketed on the final remarketing date as specified in the Notes indenture). At the remarketing, terms of the Notes including the interest rate, tenor and covenants will be modified at the discretion of a remarketing agent selected by the Company such that the proceeds generated from the remarketing will be sufficient to repay par plus accrued interest to those holders participating in the remarketing on June 1, 2012 plus fees payable to the remarketing agent,
- **Maturity of the Notes:** The Notes mature on June 1, 2014, unless the maturity date is extended during the Remarketing. In no event may the maturity date be extended beyond June 1, 2039,
- **Holder Put Right:** Holders of the Notes may exercise their put right only upon a failed final remarketing for the face amount plus accrued interest,
- Ranking: The Notes are senior, unsecured obligations of AGUS and are guaranteed by the Company. The ranking may not be modified as part of the remarketing.

### **The Purchase Contracts**

| • Parties to the Purchase Contract: Under the Purchase Contract, The Company is required on the Contract Settlement Date to deliver shares equal to the settlement rate to counterparties in exchange for a cash payment equal to the purchase price from the counterparties.  |
|--|
| • <b>Settlement Rate:</b> The number of the Company s common shares is calculated as follows:  |
| 1. If Applicable Market Value ≥ \$12.93 (the Threshold Appreciation Price): If the average closing price per share for the 20 trading day period immediately preceding the Purchase Contract Settlement Date (such average being the Applicable Market Value) exceeds the Threshold Appreciation Price, the Settlement Rate will be 3.8685 shares,   |
| 2. If Applicable Market Value $\leq $11.00$ (the Reference Price ): If the Applicable Market Value is less than or equal to the Reference Price, the Settlement Rate will be 4.5455 shares,  |
| 3. Reference Price < Applicable Market Value < Threshold Appreciation Price: If the Applicable Market Value is between the Reference Price and Threshold Appreciation Price, the Settlement Rate will be equal to the quotient of \$50.00 and the Applicable Market Value.   |
| • Contract Settlement Date: June 1, 2012. Counterparties to the Purchase Contract may elect to settle Purchase Contracts prior to the Contract Settlement Date by delivering the purchase price to the Company in exchange for the minimum Settlement Rate of 3.8685 shares, regardless of the Applicable Market Value at the time of early settlement.  |
| • Counterparty Collateral requirements: At all times, a counterparty is required to maintain collateral with the designated collateral agent securing the counterparty s obligation to deliver the purchase price under the Purchase Contracts on the Contract Settlement Date. If a counterparty holds Notes, such Notes will be posted as collateral (such arrangement referred to as Corporate Units). If a counterparty does not hold Notes, it will be required to post specified zero coupon, U.S. Treasury securities (such arrangement referred to as Treasury Units). Notwithstanding the posting of collateral, counterparty s obligation to pay the Purchase Price will be with full recourse to such counterparty. |

### Table of Contents

• Adjustment Events: Upon the occurrence of specified events (including changes in dividend policy and certain other corporate actions), the Reference Price, Threshold Appreciation Price and Settlement Ratio will be adjusted in a manner designed to preserve the fair value of the Purchase Contracts immediately prior to such specified events for both the Company and counterparty. Generally, the nature of these adjustments is designed to protect both parties against dilutive events.

The Company recorded interest expense related to the 8.50% Senior Notes of \$0.7 million and \$0.7 million for Second Quarter 2009 and Six Months 2009, respectively.

#### Series A Enhanced Junior Subordinated Debentures

On December 20, 2006, AGUS issued \$150.0 million of Series A Enhanced Junior Subordinated Debentures (the Debentures ) due 2066 for net proceeds of \$149.7 million. The proceeds of the offering were used to repurchase 5,692,599 of Assured Guaranty Ltd. s common shares from ACE Bermuda Insurance Ltd., a subsidiary of ACE. The Debentures pay a fixed 6.40% rate of interest until December 15, 2016, and thereafter pay a floating rate of interest, reset quarterly, at a rate equal to 3 month LIBOR plus a margin equal to 2.38%. AGUS may elect at one or more times to defer payment of interest for one or more consecutive periods for up to ten years. Any unpaid interest bears interest at the then applicable rate. AGUS may not defer interest past the maturity date. The Company recorded interest expense of \$2.5 million for both Second Quarter 2009 and Second Quarter 2008 and \$4.9 million for both Six Months 2009 and Six Months 2008, respectively. These Debentures are guaranteed on a junior subordinated basis by Assured Guaranty Ltd.

Credit Facilities

#### 2006 Credit Facility

On November 6, 2006, Assured Guaranty Ltd. and certain of its subsidiaries entered into a \$300.0 million five-year unsecured revolving credit facility (the 2006 credit facility) with a syndicate of banks. Under the 2006 credit facility, each of AGC, AG(UK), AG Re, AGRO and Assured Guaranty Ltd. are entitled to request the banks to make loans to such borrower or to request that letters of credit be issued for the account of such borrower.

Of the \$300.0 million available to be borrowed, no more than \$100.0 million may be borrowed by Assured Guaranty Ltd., AG Re or AGRO, individually or in the aggregate, and no more than \$20.0 million may be borrowed by AG(UK). The stated amount of all outstanding letters of credit and the amount of all unpaid drawings in respect of all letters of credit cannot, in the aggregate, exceed \$100.0 million.

The 2006 credit facility also provides that Assured Guaranty Ltd. may request that the commitment of the banks be increased an additional \$100.0 million up to a maximum aggregate amount of \$400.0 million. Any such incremental commitment increase is subject to certain conditions provided in the agreement and must be for at least \$25.0 million.

The proceeds of the loans and letters of credit are to be used for the working capital and other general corporate purposes of the borrowers and to support reinsurance transactions.

At the closing of the 2006 credit facility, (i) AGC guaranteed the obligations of AG(UK) under such facility, (ii) Assured Guaranty Ltd. guaranteed the obligations of AG Re and AGRO under such facility and agreed that, if the Company Consolidated Assets (as defined in the related credit agreement) of AGC and its subsidiaries were to fall below \$1.2 billion, it would, within 15 days, guarantee the obligations of AGC and AG(UK) under such facility, (iii) Assured Guaranty Overseas US Holdings Inc., guaranteed the obligations of Assured Guaranty Ltd., AG Re and AGRO under such facility and (iv) each of AG Re and AGRO guarantees the other as well as Assured Guaranty Ltd.

The 2006 credit facility s financial covenants require that Assured Guaranty Ltd. (a) maintain a minimum net worth of seventy-five percent (75%) of the Consolidated Net Worth of Assured Guaranty Ltd. as of the most recent fiscal quarter of Assured Guaranty Ltd. prior to November 6, 2006 and (b) maintain a maximum debt-to-capital ratio of 30%. In addition, the 2006 credit facility requires that AGC maintain qualified statutory capital of at least 75% of its statutory capital as of the fiscal quarter prior to November 6, 2006. Furthermore, the 2006 credit

### Table of Contents

facility contains restrictions on Assured Guaranty Ltd. and its subsidiaries, including, among other things, in respect of their ability to incur debt, permit liens, become liable in respect of guaranties, make loans or investments, pay dividends or make distributions, dissolve or become party to a merger, consolidation or acquisition, dispose of assets or enter into affiliate transactions. Most of these restrictions are subject to certain minimum thresholds and exceptions. The 2006 credit facility has customary events of default, including (subject to certain materiality thresholds and grace periods) payment default, failure to comply with covenants, material inaccuracy of representation or warranty, bankruptcy or insolvency proceedings, change of control and cross-default to other debt agreements. A default by one borrower will give rise to a right of the lenders to terminate the facility and accelerate all amounts then outstanding. As of June 30, 2009 and December 31, 2008, Assured Guaranty was in compliance with all of those financial covenants.

As of June 30, 2009 and December 31, 2008, no amounts were outstanding under this facility nor have there been any borrowings under this facility.

Letters of credit totaling approximately \$2.9 million remained outstanding as of June 30, 2009 and December 31, 2008, respectively, discussed in Note 9.

#### **Non-Recourse Credit Facilities**

AG Re Credit Facility

On July 31, 2007 AG Re entered into a non-recourse credit facility ( AG Re Credit Facility ) with a syndicate of banks which provides up to \$200.0 million to satisfy certain reinsurance agreements and obligations. The AG Re Credit Facility expires in July 2014.

The AG Re Credit Facility does not contain any financial covenants. The AG Re Credit Facility has customary events of default, including (subject to certain materiality thresholds and grace periods) payment default, failure to comply with covenants, material inaccuracy of representation or warranty, bankruptcy or insolvency proceedings, change of control and cross default to other debt agreements. If any such event of default were triggered, AG Re could be required to repay potential outstanding borrowings in an accelerated manner.

AG Re s obligations to make payments of principal and interest on loans under the AG Re Credit Facility, whether at maturity, upon acceleration or otherwise, are limited recourse obligations of AG Re and are payable solely from the collateral securing the AG Re Credit Facility, including recoveries with respect certain insured obligations in a designated portfolio, premiums with respect to defaulted insured obligations in that portfolio, certain designated reserves and other designated collateral.

As of June 30, 2009 and December 31, 2008, no amounts were outstanding under this facility nor have there been any borrowings under the life of this facility.

#### **Committed Capital Securities**

On April 8, 2005, AGC entered into four separate agreements with four different unaffiliated custodial trusts pursuant to which AGC may, at its option, cause each of the custodial trusts to purchase up to \$50.0 million of perpetual preferred stock of AGC. The custodial trusts were created as a vehicle for providing capital support to AGC by allowing AGC to obtain immediate access to new capital at its sole discretion at any time through the exercise of the put option. If the put options were exercised, AGC would receive \$200.0 million in return for the issuance of its own perpetual preferred stock, the proceeds of which may be used for any purpose including the payment of claims. The put options were not exercised during 2009 or 2008. Initially, all of committed capital securities of the custodial trusts (the CCS Securitiesw)ere issued to a special purpose pass-through trust (the Pass-Through Trust ). The Pass-Through Trust addissolved in April 2008 and the committed capital securities were distributed to the holders of the Pass-Through Trust securities. Neither the Pass-Through Trust nor the Custodial Trusts are consolidated in Assured Guaranty Ltd. s financial statements.

Income distributions on the Pass-Through Trust Securities and CCS Securities were equal to an annualized rate of One-Month LIBOR plus 110 basis points for all periods ending on or prior to April 8, 2008. Following

### Table of Contents

dissolution of the Pass-Through Trust, distributions on the CCS Securities are determined pursuant to an auction process. On April 7, 2008 this auction process failed, thereby increasing the annualized rate on the CCS Securities to One-Month LIBOR plus 250 basis points. Distributions on the AGC Preferred Stock will be determined pursuant to the same process.

During Second Quarter 2009 and Second Quarter 2008, AGC incurred \$1.9 million and \$1.7 million, respectively, of put option premiums which are an on-going expense. During Six Months 2009 and Six Months 2008, AGC incurred \$3.3 million and \$2.5 million, respectively, of put option premiums which are an on-going expense. The increase in Six Months 2009 compared to the respective periods in 2008 was due to the increase in annualized rates from One-Month LIBOR plus 110 basis points to One-Month LIBOR plus 250 basis points as a result of the failed auction process in April 2008. These expenses are presented in the Company s unaudited interim consolidated statements of operations and comprehensive income under other expenses.

The CCS Securities had a fair value of \$10.2 million (see Note 5) and \$51.1 million as of June 30, 2009 and December 31, 2008, respectively, and a change in fair value during Second Quarter 2009 and Six Months 2009 of \$(60.6) million and \$(40.9) million, respectively, which are recorded in the consolidated balance sheets in other assets and the unaudited interim consolidated statements of operations and comprehensive income in fair value gain (loss) on committed capital securities, respectively. The change in fair value during Second Quarter 2008 and Six Months 2008 of \$8.9 million and \$17.4 million, respectively.

#### Guarantee of FSAH s Debt

On July 20, 2009, Assured Guaranty Ltd. announced that the Company would fully and unconditionally guarantee the following three series of FSAH debt obligations consisting of: 1) \$100.0 million of 6-7/8% Notes due December 15, 2101, 2) \$230.0 million principal amount of 6.25% Notes due November 1, 2102, and 3) \$100.0 million principal amount of 5.60% Notes due July 15, 2103. The Company also would guarantee, on a junior subordinated basis, the \$300 million of FSAH s outstanding Junior Subordinated Debentures due 2066.

## 11. Employee Benefit Plans

#### **Share-Based Compensation**

Share-based compensation expense in Second Quarter 2009 and Second Quarter 2008 was \$1.6 million (\$1.2 million after tax) and \$2.0 million (\$1.5 million after tax), respectively. Share-based compensation expense in Six Months 2009 and Six Months 2008 was \$5.3 million (\$4.3 million after tax) and \$8.4 million (\$6.9 million after tax), respectively. The effect on basic and diluted earnings per share for Second Quarter 2009 and Six Months 2009 was \$0.01 and \$0.05, respectively. The effect on basic and diluted earnings per share for Second Quarter 2008 and Six Months 2008 was \$0.02 and \$0.08, respectively. Second Quarter 2009 and Six Months 2009 expense included \$(0.1) million (\$(0.1) million after tax) and \$2.0 million (\$1.7 million after tax), respectively, related to accelerated vesting for stock award grants to retirement-eligible employees. Second Quarter 2008 and Six Months 2008 expense included \$(0.2) million (\$(0.2) million after tax) and \$3.7 million (\$3.3 million after tax), respectively, related to accelerated vesting for stock award grants to retirement-eligible employees.

#### Performance Retention Plan

The Company recognized approximately \$0.9 million (\$0.6 million after tax) and \$0.8 million (\$0.6 million after tax) of expense for performance retention awards in Second Quarter 2009 and Second Quarter 2008, respectively. The Company recognized approximately \$6.2 million (\$5.1 million after tax) and \$6.3 million (\$5.2 million after tax) of expense for performance retention awards in Six Months 2009 and Six Months 2008, respectively. Included in Second Quarter 2009 and Six Months 2009 amounts were \$0 million and \$4.3 million, respectively, of accelerated expense related to retirement-eligible employees. Included in Second Quarter 2008 and Six Months 2008 amounts were \$0 million and \$4.6 million, respectively, of accelerated expense related to retirement-eligible employees.

### 12. Earnings Per Share

Effective January 1, 2009, the Company adopted FSP EITF 03-6-1, Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities (FSP). The FSP clarifies that share-

### Table of Contents

based payment awards that entitle their holders to receive nonforfeitable dividends or dividend equivalents before vesting should be considered participating securities. Restricted stock awards granted prior to February 2008 are considered participating securities as they received non-forfeitable rights to dividends at the same rate as common stock. As participating securities, the Company is required to include these instruments in the calculation of basic earnings per share ( EPS ), and needs to calculate basic EPS using the two-class method described in FAS No. 128, Earnings per Share.

Prior to adoption of the FSP, restricted stock was included in our dilutive EPS calculation using the treasury stock method. The two-class method of computing EPS is an earnings allocation formula that determines EPS for each class of common stock and participating security according to dividends declared (or accumulated) and participation rights in undistributed earnings. Basic EPS is then calculated by dividing net (loss) income available to common shareholders by the weighted-average number of common shares outstanding during the period. Diluted EPS adjusts basic (loss) earnings per share for the effects of restricted stock, stock options and other potentially dilutive financial instruments (dilutive securities), only in the periods in which such effect is dilutive. The dilutive effect of the dilutive securities is reflected in diluted EPS by application of the more dilutive of (1) the treasury stock method or (2) the two-class method assuming nonvested shares are not converted into common shares. The FSP requires the presentation of basic and diluted EPS for each class of common stock. The Company has a single class of common stock. Therefore, the following EPS amounts only pertain to common stock. Pursuant to the FSP, all prior period EPS data were adjusted retrospectively. The impact of adopting the FSP decreased previously reported basic EPS by \$0.05 and \$0.04 for the three and six months ended June 30, 2008, and previously reported diluted EPS by \$0.01 for the three months ended June 30, 2008. There was no impact of adopting the FSP on previously reported diluted EPS for the six months ended June 30, 2008.

The following table sets forth the computation of basic and diluted earnings per share:

|  |   | Three M<br>Ju  | Ionth<br>une 3 |                        | ed      |  |       | Six Mo<br>Ju | onths<br>une 3 |    | l       |

| Options and restricted stock awards |             |   | 710        |    |        |   | 653        |
|-------------------------------------|-------------|---|------------|----|--------|---|------------|
| Diluted shares                      | 93,058      |   | 90,624     |    | 91,941 |   | 85,632     |
| Diluted EPS                         | \$<br>(1.82 | ) | \$<br>5.96 | \$ | (0.91  | ) | \$<br>4.35 |

Potentially dilutive securities representing approximately 5.8 million and 2.0 million shares of common stock for the three months ended June 30, 2009 and 2008, respectively, and 5.7 million and 2.0 million shares of common stock for the six months ended June 30, 2009 and 2008, respectively, were excluded from the computation of diluted earnings per share for these periods because their effect would have been antidilutive.

### Table of Contents

#### 13. Income Taxes

As of both June 30, 2009 and December 31, 2008, AGRO had a standalone NOL of \$47.9 million, which is available to offset its future U.S. taxable income. The Company has \$27.2 million of this NOL available through 2017 and \$20.7 million available through 2023. AGRO s stand alone NOL is not permitted to offset the income of any other members of AGRO s consolidated group due to certain tax regulations. Assured Guaranty Mortgage Insurance Company is a member of the same consolidated tax group as AGRO. In Six Months 2009 AGMIC had a projected NOL of \$2.4 million which would be available through 2020.

Under applicable accounting rules, the Company is required to establish a valuation allowance for NOLs that are more likely than not to expire before being utilized. Management has assessed the likelihood of realization of all of its deferred tax assets. Based on this analysis, management believes it is more likely than not that \$20.0 million of AGRO s \$47.9 million NOL will not be utilized before it expires and has established a \$7.0 million valuation allowance related to the NOL deferred tax asset. In addition, for the three months ended June 30, 2009, management assessed that a valuation allowance of \$3.4 million is no longer necessary for AGMIC due to the decrease in loss reserves in the same period. Management believes that all other deferred income taxes are more-likely-than-not to be realized. The valuation allowance is subject to considerable judgment, is reviewed quarterly and will be adjusted to the extent actual taxable income differs from estimates of future taxable income that may be used to realize NOLs or capital losses.

#### Liability For Tax Basis Step-Up Adjustment

In connection with the IPO, the Company and ACE Financial Services Inc. (AFS), a subsidiary of ACE, entered into a tax allocation agreement, whereby the Company and AFS made a Section 338 (h)(10) election that has the effect of increasing the tax basis of certain affected subsidiaries tangible and intangible assets to fair value. Future tax benefits that the Company derives from the election will be payable to AFS when realized by the Company.

As a result of the election, the Company has adjusted its net deferred tax liability to reflect the new tax basis of the Company s affected assets. The additional basis is expected to result in increased future income tax deductions and, accordingly, may reduce income taxes otherwise payable by the Company. Any tax benefit realized by the Company will be paid to AFS. Such tax benefits will generally be calculated by comparing the Company s affected subsidiaries actual taxes to the taxes that would have been owed by those subsidiaries had the increase in basis not occurred. After a 15 year period, to the extent there remains an unrealized tax benefit, the Company and AFS will negotiate a settlement of the unrealized benefit based on the expected realization at that time.

The Company initially recorded a \$49.0 million reduction of its existing deferred tax liability, based on an estimate of the ultimate resolution of the Section 338(h)(10) election. Under the tax allocation agreement, the Company estimated that, as of the IPO date, it was obligated to pay \$20.9 million to AFS and accordingly established this amount as a liability. The initial difference, which is attributable to the change in the tax basis of certain liabilities for which there is no associated step-up in the tax basis of its assets and no amounts due to AFS, resulted in an increase to additional paid-in capital of \$28.1 million. As of June 30, 2009 and December 31, 2008, the liability for tax basis step-up adjustment, which is included in the Company s balance sheets in Other liabilities, were \$8.8 million and \$9.1 million, respectively. The Company has paid ACE and correspondingly reduced its liability by \$0.4 million and \$0.4 million in Six Months 2009 and Six Months 2008, respectively.

### Tax Treatment of CDS

The Company treats the guaranty it provides on CDS as insurance contracts for tax purposes and as such a taxable loss does not occur until the Company expects to make a loss payment to the buyer of credit protection based upon the occurrence of one or more specified credit events with respect to the contractually referenced obligation or entity. The Company holds its CDS to maturity, at which time any unrealized mark to market loss would revert to zero absent any credit related losses. As of June 30, 2009, the Company did not anticipate any significant credit related losses on its credit default swaps and, therefore, no resultant tax deductions.

The tax treatment of CDS is an unsettled area of the law. The uncertainty relates to the IRS s determination of the income or potential loss associated with CDS as either subject to capital gain (loss) or ordinary income (loss) treatment. In treating CDS as insurance contracts the Company treats both the receipt of premium and payment of losses as ordinary income and believes it is more likely than not that any CDS credit related losses will be treated as

#### **Table of Contents**

ordinary by the IRS. To the extent the IRS takes the view that the losses are capital losses in the future and the Company incurred actual losses associated with the CDS the Company would need sufficient taxable income of the same character within the carryback and carryforward period available under the tax law.

As of June 30, 2009 and December 31, 2008 the deferred tax assets associated with CDS were \$192.1 million and \$116.5 million, respectively. The Company came to the conclusion that it is more likely than not that its deferred tax asset related to CDS will be fully realized after weighing all positive and negative evidence available as required under FAS 109. The evidence that was considered included the following:

#### Negative Evidence

- Although the Company believes that income or losses for these credit default swaps are properly characterized for tax purposes as ordinary, the federal tax treatment is an unsettled area of tax law as described above.
- Changes in the fair value of CDS have resulted in significant swings in the Company s net income in recent periods. Changes in the fair value of CDS in future periods could result in the U.S. consolidated tax group having a pre-tax loss under GAAP. Although not recognized for tax, this loss could result in a cumulative three year pre-tax loss, which is considered significant negative evidence for the recoverability of a deferred tax asset under FAS 109.
- For the three year period ended June 30, 2009 the US consolidated tax group had a pre-tax loss under GAAP of \$464.1 million.

#### Positive Evidence

- The mark-to-market loss on CDS is not considered a tax event, and therefore no taxable loss has occurred.
- After analysis of the current tax law on CDS the Company believes it is more likely than not that the CDS will be treated as ordinary income or loss for tax purposes.
- Assuming a hypothetical loss were triggered for the amount of deferred tax asset ( DTA ), there would be enough taxable income through carryback and future income to offset it as follows:
- The amortization of the tax-basis unearned premium reserve of \$682.2 million as of June 30, 2009 as well as the collection of future installment premiums of contracts already written we believe will result in significant taxable income in the future.
- The Company has the ability to carryback losses two years which would offset over \$22.8 million of losses as of June 30, 2009.
- Although the Company has a significant tax exempt portfolio, this can be converted to taxable securities as permitted as a tax planning strategy under FAS 109.

• The mark-to-market loss is reflective of market valuations and will change from quarter to quarter. It is not indicative of the Company s ability to enter new business. The Company writes and continues to write new business which will increase the amortization of unearned premium and investment portfolio resulting in expected taxable income in future periods.

After examining all of the available positive and negative evidence, the Company believes that no valuation allowance is necessary in connection with the deferred tax asset. The Company will continue to analyze the need for a valuation allowance on a quarter-to-quarter basis.

#### **Table of Contents**

### 14. Segment Reporting

The Company has four principal business segments: (1) financial guaranty direct, which includes transactions whereby the Company provides an unconditional and irrevocable guaranty that indemnifies the holder of a financial obligation against non-payment of principal and interest when due, and could take the form of a credit derivative; (2) financial guaranty reinsurance, which includes agreements whereby the Company is a reinsurer and agrees to indemnify a primary insurance company against part or all of the loss which the latter may sustain under a policy it has issued; (3) mortgage guaranty, which includes mortgage guaranty insurance and reinsurance whereby the Company provides protection against the default of borrowers on mortgage loans; and (4) other, which includes lines of business in which the Company is no longer active.

The Company does not segregate assets and liabilities at a segment level since management reviews and controls these assets and liabilities on a consolidated basis. The Company allocates operating expenses to each segment based on a comprehensive cost study and is based on departmental time estimates and headcount.

Management uses underwriting gains and losses as the primary measure of each segment s financial performance. Underwriting gain is calculated as net earned premiums plus realized gains and other settlements on credit derivatives, less the sum of loss and loss adjustment expenses (recoveries) including incurred losses on credit derivatives, profit commission expense, acquisition costs and other operating expenses that are directly related to the operations of the Company s insurance businesses. This measure excludes certain revenue and expense items, such as net investment income, realized investment gains and losses, unrealized losses on credit derivatives, fair value gain (loss) on committed capital securities, other income, FSAH acquisition-related expenses, interest expense and other expenses, that are not directly related to the underwriting performance of the Company s insurance operations, but are included in net income.

The following tables summarize the components of underwriting gain (loss) for each reporting segment:

|   |    |                               |   |    | Three                                | e Moi | nths En | ded June             | 30, 2 | 2009 |      |  |             |
