The aggregate market value of the voting and non-voting common equity of Gastar Exploration Ltd. held by non-affiliates of Gastar Exploration Ltd. as of June 30, 2011 (the last business day of Gastar Exploration Ltd.'s most recently completed second fiscal quarter) was approximately \$193.9 million based on the closing price of \$3.43 per share on the NYSE Amex, LLC.

All common equity in Gastar Exploration USA, Inc. is held by Gastar Exploration Ltd., an affiliate of Gastar Exploration USA, Inc.

Gastar Exploration USA, Inc. meets the conditions set forth in General Instruction (I)(1)(a) and (b) and is filing this Form with the reduced disclosure format.

The total number of outstanding common shares, no par value per share, as of March 6, 2012 was:

Gastar Exploration Ltd.	65,823,480 shares of common stock
Gastar Exploration USA, Inc.	750 shares of common stock

Documents incorporated by reference:

The information required by Part III of Form 10-K (Items 10, 11, 12, 13 and 14 thereunder) is incorporated by reference herein from portions of Gastar Exploration Ltd.'s definitive proxy statement relating to its 2012 annual meeting of shareholders to be filed with the U.S. Securities and Exchange Commission ("SEC") within 120 days of December 31, 2011.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Report on Form 10-K ("Form 10-K") includes forward-looking information that is intended to be covered by the "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). All statements other than statements of historical fact included or incorporated by reference in this Form 10-K are forward-looking statements, including without limitation all statements regarding future plans, business objectives, strategies, expected future financial position or performance, expected future operational position or performance, budgets and projected costs, future competitive position or goals and/or projections of management for future operations. In some cases, you can identify a forward-looking statement by terminology such as "may," "will," "could," "should," "expect," "plan," "project," "intend," "anticipate," "believe," "estimate," "predict," "potential," "pursue," "target" or "continue," the negative of such terms or variations thereon, or other comparable terminology.

The forward-looking statements contained in this report are largely based on our expectations and beliefs concerning future developments and their potential effect on us, which reflect certain estimates and assumptions made by our management. These estimates and assumptions reflect our best judgment based on currently known market conditions, operating trends and other factors. Forward-looking statements may include statements that relate to, among other things, our:

- financial position;
- business strategy and budgets;
- anticipated capital expenditures;
- drilling of wells, including the anticipated scheduling and results of such operations;
- natural gas, oil and NGLs reserves;
- timing and amount of future production of natural gas, oil, NGLs and condensate;
- operating costs and other expenses;
- cash flow and anticipated liquidity;
- prospect development; and
- property acquisitions and sales.

Although we believe such estimates and assumptions to be reasonable, they are inherently uncertain and involve a number of risks and uncertainties that are beyond our control. As such, management's assumptions about future events may prove to be inaccurate. For a more detailed description of the risks and uncertainties involved, see Item 1A. "Risk Factors" in Part I of this Form 10-K. We do not intend to publicly update or revise any forward-looking statements as a result of new information, future events, changes in circumstances or otherwise. These cautionary statements qualify all forward-looking statements attributable to us, or persons acting on our behalf. Management cautions all readers that the forward-looking statements contained in this report are not guarantees of future performance, and we cannot assure any reader that such statements will be realized or that the events and circumstances they describe will occur. Factors that could cause actual results to differ materially from those anticipated or implied in the forward-looking statements herein include, but are not limited to:

- the supply and demand for natural gas, oil and NGLs;
- low and/or declining prices for natural gas, oil and NGLs;
- natural gas, oil and NGLs price volatility;
- worldwide political and economic conditions and conditions in the energy market;
- our ability to raise capital to fund capital expenditures or repay or refinance debt upon maturity;
- the ability and willingness of our current or potential counterparties, third-party operators or vendors to enter into transactions with us and/or to fulfill their obligations to us;
- failure of our joint interest partners to fund any or all of their portion of any capital program;
- the ability to find, acquire, market, develop and produce new natural gas and oil properties;
-

uncertainties about the estimated quantities of natural gas and oil reserves and in the projection of future rates of production and timing of development expenditures of proved reserves;  
• strength and financial resources of competitors;  
• availability and cost of material and equipment, such as drilling rigs and transportation pipelines;

iii

---

Table of Contents

Index to Financial Statements

• availability and cost of processing and transportation;

• changes or advances in technology;

• the risks associated with exploration, including cost overruns and the drilling of non-economic wells or dry wells,

• operating hazards inherent to the natural gas and oil business and down hole drilling and completion risks that are generally not recoverable from third parties or insurance;

• potential mechanical failure or under-performance of significant wells or pipeline mishaps;

• environmental risks;

• possible new legislative initiatives and regulatory changes potentially adversely impacting our business and industry, including, but not limited to, national healthcare, hydraulic fracturing, state and federal corporate income taxes, retroactive royalty or production tax regimes, changes in environmental regulations, environmental risks and liability under federal, state and local environmental laws and regulations;

• effects of the application of applicable laws and regulations, including changes in such regulations or the interpretation thereof;

• potential losses from pending or possible future claims, litigation or enforcement actions;

• potential defects in title to our properties or lease termination due to lack of activity or other disputes with mineral lease and royalty owners, whether regarding calculation and payment of royalties or otherwise;

• the weather, including the occurrence of any adverse weather conditions and/or natural disasters affecting our business;

• ability to find and retain skilled personnel; and

• any other factors that impact or could impact the exploration of natural gas or oil resources, including, but not limited to, the geology of a resource, the total amount and costs to develop recoverable reserves, legal title, regulatory, natural gas administration, marketing and operational factors relating to the extraction of natural gas and oil.

For a more detailed description of the risks and uncertainties that we face and other factors that could affect our financial performance or cause our actual results to differ materially from our projected results please see (i) Part I, Item 1A. "Risk Factors" and elsewhere in this Form 10-K, (ii) our subsequent reports and registration statements filed from time to time with the Securities and Exchange Commission ("SEC") and (iii) other announcements we make from time to time.

You should not unduly rely on these forward-looking statements in this Form 10-K, as they speak only as of the date of this Form 10-K. Except as required by law, we undertake no obligation to publicly update, revise or release any revisions to these forward-looking statements after the date on which they are made to reflect new information, events or circumstances occurring after the date of this Form 10-K or to reflect the occurrence of unanticipated events.

Unless otherwise indicated or required by the context, (i) "Gastar," the "Company," "we," "us," "our" and similar terms refer collectively to Gastar Exploration Ltd. and its subsidiaries, including Gastar Exploration USA, Inc., and predecessors, (ii) "Gastar USA" refers to Gastar Exploration USA, Inc., our first-tier subsidiary and primary operating company, (iii) "Parent" refers solely to Gastar Exploration Ltd., (iv) all dollar amounts appearing in this Form 10-K are stated in United States dollars ("U.S. dollars") unless otherwise noted and (v) all financial data included in this Form 10-K have been prepared in accordance with generally accepted accounting principles in the United States of America ("U.S. GAAP").

As of the opening of trading on August 3, 2009, a common share consolidation on the basis of one (1) common share for five (5) common shares (the "1-for-5 Reverse Split") became effective. All common share and per share amounts reported in this Form 10-K have been reported on a post reverse split basis.

Glossary of Terms

AMI	Area of Mutual Interest, an agreed designated geographic area where joint venturers or other industry partners have a right of participation in acquisitions and operations
Bbl	Barrel of oil, condensate or NGLs
Bbl/d	Barrels of oil, condensate or NGLs per day
Bcf	One billion cubic feet of natural gas
Bcfe	One billion cubic feet of natural gas equivalent
Btu	British thermal unit, typically used in measuring natural gas energy content
CBM	Coal bed methane
FASB	Financial Accounting Standards Board
GAAP	Accounting principles generally accepted in the United States of America
MBbl	One thousand barrels of oil, condensate or NGLs
MBbl/d	One thousand barrels of oil, condensate or NGLs per day
Mcf	One thousand cubic feet of natural gas
Mcf/d	One thousand cubic feet of natural gas per day
MMBtu/d	One million British thermal units per day
MMcf	One million cubic feet of natural gas
MMcf/d	One million cubic feet of natural gas per day
Mcfe	One thousand cubic feet of natural gas equivalent
MMcfe	One million cubic feet of natural gas equivalent
MMcfe/d	One million cubic feet of natural gas equivalent per day
NGLs	Natural gas liquids
psi	Pounds per square inch

PART I

Item 1. Business

Overview

We are an independent energy company engaged in the exploration, development and production of natural gas and oil in the U.S. Our principal business activities include the identification, acquisition, and subsequent exploration and development of natural gas and oil properties with an emphasis on unconventional reserves, such as shale resource plays. We are currently pursuing the development of liquids-rich natural gas in the Marcellus Shale in the Appalachia area of West Virginia and, to a lesser extent, central and southwestern Pennsylvania. We also hold prospective acreage in the deep Bossier play in the Hilltop area of East Texas and conduct limited CBM development activities within the Powder River Basin of Wyoming and Montana.

Gastar Exploration Ltd. is a Canadian corporation, incorporated in Alberta in 1987 and subsisting under the Business Corporations Act (Alberta), with its common shares listed on the NYSE Amex under the symbol "GST." Gastar Exploration Ltd. is a holding company and substantially all of its operations are conducted through, and substantially all of its assets are held by, its primary operating subsidiary, Gastar USA and its wholly-owned subsidiaries. Gastar USA is a Delaware corporation with its 8.625% Series A Cumulative Preferred Stock listed on the NYSE Amex under the symbol "GST.PRA." Our principal office is located at 1331 Lamar Street, Suite 650, Houston, Texas 77010, and our telephone number is (713) 739-1800. Our website address is <http://www.gastar.com>. Information on our website or about us on any other website is not incorporated by reference into and does not constitute part of this Form 10-K.

Our Strategy

Our strategy is to increase stockholder value by delivering sustainable reserves growth and improved operating results from our existing assets. We recognize that there may be periods, such as the recent declines in natural gas prices, which make it difficult to fully execute this strategy on a short-term basis. We intend to implement our strategy by focusing on:

- continued exploitation of existing Marcellus Shale assets with a focus on areas that we believe are prospective for natural gas with relatively high NGLs and condensate content;
- active management of our domestic drilling program; and
- effective management and utilization of technological expertise.

Continue Exploitation of Existing Marcellus Shale Assets and Focus on Areas with Relatively High NGLs and Condensate Content

Due to lower natural gas prices, we are focusing the majority of our 2012 drilling activity in the liquids-rich area of the Marcellus Shale. Our 2012 capital budget includes plans to drill and complete 20 gross (9.8 net) operated new Marcellus horizontal wells in Marshall County, West Virginia and complete 10 gross (4.5 net) additional operated Marcellus horizontal wells that were drilled and awaiting completion as of December 31, 2011. In addition, during 2011, we increased our acreage position in Marcellus West (as defined below) to approximately 43,400 gross (19,900 net) acres. We believe that the expansion of our acreage position and our drilling activity in the Marcellus Shale during 2011 has provided us with multi-year inventory of drilling opportunities in that area. Our focus continues to be in a prospectively liquids-rich area with subsequent focus on drilling acreage in order to hold the acreage "by production" prior to lease term expirations.

Actively Manage Our Domestic Drilling Program

We believe that operating approximately 87% of our drilling projects for 2012 enables us to control the timing and cost of our drilling budget as well as control operating costs and the marketing of our production. We have assembled an experienced team of operating professionals with the specialized skills needed to plan and execute the drilling and completion of horizontal Marcellus Shale wells.

Manage and Utilize Technological Expertise

We believe that 3-D seismic analysis, micro-seismic data acquisition and interpretation, enhanced natural gas recovery processes, horizontal drilling and other advanced drilling technologies and production techniques are valuable tools that improve drilling results and ultimately enhance production and returns. We believe that utilizing these technologies and production techniques in exploring for, developing and exploiting natural gas and oil properties has helped us reduce drilling

1

---

Table of Contents

Index to Financial Statements

risks, lower finding costs and provide for more efficient production of natural gas and oil from our properties.

Natural Gas and Oil Activities

The following provides an overview of our major natural gas and oil projects during 2011. While actively pursuing specific exploration and development activities in each of the following areas, we continue to review other opportunities. There is no assurance that new drilling opportunities will be identified or that any new drilling opportunities will be successful if drilled.

Marcellus Shale and Other Appalachia

The Marcellus Shale is a Devonian aged formation that underlies much of the Appalachian region of Pennsylvania, New York, Ohio, West Virginia and adjacent states. The depth of the Marcellus Shale and its low permeability make the Marcellus Shale an unconventional exploration target in the Appalachian Basin. Advancements in horizontal drilling and stimulation have produced promising results in the Marcellus Shale. These developments have resulted in increased leasing and drilling activity in the area. At December 31, 2011, our acreage position in the Marcellus Shale was approximately 106,400 gross (76,100 net) acres. We refer to the approximately 43,400 gross (19,900 net) acres reflecting our interest in our Marcellus Shale assets in West Virginia and Pennsylvania subject to the Atinum Joint Venture described below as our Marcellus West acreage. We refer to the approximately 63,000 gross (56,200 net) acres in Preston, Tucker, Pocahontas, Randolph and Pendleton Counties, West Virginia as our Marcellus East acreage. The entirety of our acreage is believed to be in the core, over-pressured area of the Marcellus Shale play.

On September 21, 2010, we entered into a joint venture (the "Atinum Joint Venture") pursuant to a purchase and sale agreement with Atinum Marcellus I, LLC ("Atinum"), an affiliate of Atinum Partners Co. Ltd., a Korean investment firm. Pursuant to the agreement, at the closing of the transaction on November 1, 2010, we assigned to Atinum, for \$70.0 million in total consideration, an initial 21.43% interest in all of our existing Marcellus Shale assets in West Virginia and Pennsylvania, consisting of certain undeveloped acreage and a 50% working interest in 16 producing shallow conventional wells and one non-producing vertical Marcellus Shale well (the "Atinum Joint Venture Assets"). Atinum paid us approximately \$30.0 million in cash upon closing. Additionally, Atinum is obligated to fund its 50% share of drilling, completion and infrastructure costs, and was obligated to pay an additional \$40.0 million of future drilling costs in the form of a drilling carry obligation by funding 75% of our 50% share of those same costs. As of December 31, 2011, Atinum had funded the entire \$40.0 million drilling carry. Upon completion of the funding of the drilling carry, we made additional assignments, as necessary, to Atinum resulting in Atinum owning a 50% interest in the Atinum Joint Venture Assets.

The Atinum Joint Venture's initial three-year development program called for the partners to drill a minimum of 12 horizontal wells in 2011, 24 horizontal wells in 2012 and 24 horizontal wells in 2013. Due to recent natural gas price declines, Atinum and Gastar USA have agreed to reduce the 2012 minimum wells to be drilled requirement from 24 wells to 20 wells. As of December 31, 2011, we had drilled and cased 17 gross (7.2 net) operated wells and were in various stages of drilling on five gross (2.5 net) operated wells in Marshall County, West Virginia, under the Atinum Joint Venture. Through June 30, 2011, an initial AMI was established for potential additional acreage acquisitions in Ohio and New York along with the counties in West Virginia and Pennsylvania in which the existing Atinum Joint Venture Assets were located. Subsequent to June 30, 2011, Atinum has the right to participate in any future leasehold acquisitions made by us within Ohio, New York, Pennsylvania and West Virginia, excluding the counties of Pendleton, Pocahontas, Preston, Randolph and Tucker, West Virginia, on terms identical to those governing the existing Atinum Joint Venture. We will act as operator and are obligated to offer any future lease acquisitions to Atinum on a 50/50 basis. Atinum will pay us on an annual basis an amount equal to 10% of lease bonuses and third party leasing costs up to \$20.0 million and 5% of such costs on leasing activities above \$20.0 million.

In December 2010, we completed a Marcellus Shale leasehold acquisition for the Marcellus East acreage for an aggregate purchase price of \$28.9 million. The acquisition consisted of undeveloped leasehold in the Marcellus Shale concentrated in Preston, Tucker, Pocahontas, Randolph and Pendleton Counties, West Virginia, including a gathering system comprised of 41 miles of four and six inch steel pipeline, a salt water disposal well and five conventional producing wells. Marcellus East was outside the initial AMI with Atinum, and Atinum elected not to acquire a 50%

interest as provided under the terms of the Atinum Joint Venture. We believe their decision was due to the timing of the transaction and limited prior operational results within the initial Atinum Joint Venture AMI. We have completed the drilling of the Hickory Ridge 2H horizontal Marcellus well in Marcellus East in Preston County, West Virginia. We completed the 2,500 foot lateral with a ten-stage fracture stimulation in August 2011 and the well has recovered approximately 50% of the fluids used in its completion. Currently, the well is producing approximately 100 Mcf/d. Nearby vertical wells also experienced low gas rates prior to recovering at least 75% of completion fluids. We recently installed a compressor to assist with accelerating the recovery of the completion fluids from the well, and we believe the well will be capable of producing at economic rates. Due to the current natural gas price environment, we are currently not planning to drill any additional wells on the Marcellus East acreage during 2012, but we are

Table of Contents

Index to Financial Statements

in the process of permitting a 3-D seismic survey over a portion of Marcellus East with a targeted completion date of early 2013.

As of December 31, 2011, our operated well activity in Marshall County, West Virginia was comprised of nine gross (four net) producing wells, eight gross (3.2 net) wells drilled and either fracture stimulated or waiting to be fracture stimulated and five gross (2.5 net) wells in various stages of drilling in progress. The nine operated wells on production were comprised of the Wengerd 1H and 7H wells, the Corley 1H, 2H, 3H and 4H wells and the Simms 1H, 2H and 3H wells. Subsequent to year end 2011, we placed the Hall 1H, 2H and 3H wells on sales resulting in total operated wells currently on sales of 12 gross (5.2 net) wells. Our average working interest in these 12 producing wells is 43.5% and the average well lateral length is approximately 4,900 feet. We are currently in the process of completing the fracture stimulation of the remaining two wells on the five well Hendrickson pad and anticipate having these five wells on sales by early April 2012. Our average working interest in the Hendrickson wells is 40% and the average well lateral length is approximately 4,700 feet.

As of December 31, 2011, we had commenced drilling operations on the Burch Ridge lease, a five horizontal well pad scheduled for production in July 2012 and on the Accettolo lease, a three horizontal well pad scheduled for production in May 2012, in Marshall County, West Virginia. Our average working interest in the Burch Ridge and Accettolo wells is 50% and the average well lateral length for the Burch Ridge and Accettolo wells is targeted to be approximately 5,500 feet and 4,600 feet, respectively.

As of December 31, 2011, we had participated on a non-operated basis in the drilling of seven horizontal Marcellus Shale wells in Butler County, Pennsylvania and an additional four non-operated horizontal Marcellus Shale wells in Marshall County, West Virginia. Three of the seven Butler County wells were turned to production on December 1, 2011 with the remaining four wells scheduled to be completed and on sales in March 2012. Our average working interest in the Butler County wells is 19.2% and the average lateral length of the wells is 3,900 feet. Of the four Marshall County non-operated wells, two of the wells were on production prior to year end and the remaining two wells are scheduled to be placed on production by late first quarter 2012. Our current average working interest in the Marshall County wells is 22.5% and the average well lateral length is approximately 4,200 feet.

For the year ended December 31, 2011, net production from the Marcellus Shale averaged 2.4 MMcfe/d compared to 0.4 MMcfe/d in 2010, which was primarily from the shallower Devonian formation. For the three months ended December 31, 2011, net production from the Marcellus Shale averaged 5.2 MMcfe/d compared to 0.3 MMcfe/d for the three months ended December 31, 2010, which was primarily from the shallower Devonian formation. At December 31, 2011, proved reserves attributable to the Marcellus Shale were approximately 84.0 Bcfe, a significant increase from year-end 2010 reserves of 2.8 Bcfe. As of December 31, 2011, Marcellus Shale proved reserves represented approximately 70% of our total proved reserves. Total Marcellus Shale proved reserves at year-end 2011 were comprised of approximately 33% of oil and NGLs reserves compared to 7% at year-end 2010. Approximately 51% of the Marcellus Shale year-end 2011 reserves are proved developed. The following table provides production and operational information about the Marcellus Shale for the periods indicated:

Table of ContentsIndex to Financial Statements

Transportation, treating and gathering	\$0.10	\$0.01	\$—
Production costs (1)	\$1.03	\$2.88	\$3.15

(1) Production costs include lease operating expense, insurance, gathering and workover expense and excludes ad valorem and severance taxes.

For the fiscal year 2012, in Marshall County, West Virginia, we currently anticipate that we will drill and complete 20 gross (9.8 net) operated new horizontal Marcellus Shale wells and we will commence drilling operations on another nine gross (4.2 net) operated horizontal Marcellus Shale wells to be completed during 2013. Additionally, during 2012, we will complete 10 gross (4.5 net) operated horizontal Marcellus Shale wells that were drilled and awaiting completion as of December 31, 2011. Based on this projected activity, and assuming successful completion of wells budgeted for completion in 2012, we anticipate having 39 gross (18.0 net) operated wells on production by year-end 2012.

#### Hilltop Area, East Texas

At December 31, 2011, we held leases covering approximately 41,100 gross (21,900 net) acres in the Bossier play in the Hilltop area of East Texas in Leon and Robertson Counties. The Bossier play is an unconventional play characterized by Jurassic-age series of sands deposited in an ancient deepwater environment in mini-basins or depositional lows and on the flanks of structures that existed at the time of deposition. Wells in this area target multiple potentially productive natural gas formations and are typically characterized by high initial production and attractive long-lived reserves per well.

During 2011, we completed drilling of the Belin #2, an exploration well testing the deep Bossier formation in a separate fault block near the Belin #1 well. The well reached total depth of 19,650 feet and encountered approximately 130 net feet of pay in the lower Bossier formation within five separate sand intervals. The initial formation zone was fracture stimulated in April 2011 with marginal results. We are currently evaluating completion plans for this well. We have a 67% before payout working interest and an approximate 50% before payout net revenue interest in the

Belin #2 well.

We drilled the Belin #3 well in the same fault block as the Belin #2 well. The well reached total depth of 20,100 feet in mid-July 2011 and encountered approximately 60 net feet of pay in the lower Bossier formation within four separate sand intervals. The lower formation zones were fracture stimulated in September and October 2011. The lower zone initial

4

---

Table of Contents

Index to Financial Statements

production rate was 1.9 MMcf/d, and the next zone fracture stimulation resulted in an initial production rate of 4.9 MMcf/d. The well is currently averaging approximately 0.8 MMcf/d. We will consider adding the two additional Bossier behind pipe zones at a later date. We have a 67% before payout working interest and an approximate 50% before payout net revenue interest in the Belin #3 well.

We added two recompletion zones in the Wildman #5 during October 2011. Current production from the commingled zones in the well is approximately 2.3 MMcf/d.

In May 2010, we drilled the Wildman 6H, a horizontal well, in the Glen Rose formation and completed it with a single-stage fracture stimulation. The Wildman 6H well was completed using a slotted liner which did not allow for the multi-stage fracture stimulation of the horizontal wellbore where several natural fractures were observed.

Recognizing that our original completion approach was not optimal, we decided to further test the Glen Rose formation. Subsequently, we drilled two other wells to test the Glen Rose formation -- another horizontal well, the Wildman 8H, and a vertical well, the Williams #2. The Wildman 8H and Williams #2 were fracture stimulated and completed in late February 2011. While production results were initially encouraging, subsequent oil production has been lower than expected, primarily as a result of excessive water production. We will continue to monitor production for these wells before continuing with horizontal development of the Glen Rose formation.

In January 2011, we attempted to test the Eagle Ford Shale/Woodbine formation with one well in East Texas, the Wildman 7H. The Wildman 7H horizontal well was intended to test the Eagle Ford Shale/Woodbine formation, but due to drilling issues, the well was re-targeted and the horizontal lateral drilled in a slightly deeper transitional limestone zone known as the False Buda. The well was fracture stimulated with a 16-stage completion. Micro-seismic information was gathered during the completion process, and processing and interpretation of that data revealed that our fracture stimulation did not extend upward as anticipated in order to allow extraction from the Eagle Ford Shale/Woodbine formation. We postponed drilling a subsequent Eagle Ford well in 2012 as we monitor increasing offset operator drilling activity in the zone. If we drill an additional Eagle Ford/Woodbine Shale well, we expect the horizontal lateral will be targeted within the portion of the Eagle Ford Shale/Woodbine formation that was originally the target of the Wildman 7H well.

Table of ContentsIndex to Financial Statements

For the year ended December 31, 2011, net production from the Hilltop area averaged 17.3 MMcfe/d compared to 18.6 MMcfe/d for the year ended December 31, 2010. For the three months ended December 31, 2011, net production from the Hilltop area averaged approximately 15.5 MMcfe/d compared to 23.8 MMcfe/d for the three months ended December 31, 2010. At December 31, 2011, proved reserves attributable to the Hilltop area were approximately 34.3 Bcfe, representing approximately 29% of our total proved reserves and of which 100% is proved developed. The following table provides production and operational information about the Hilltop area for the periods indicated:

Hilltop Area, East Texas	For the Years Ended December 31,		
	2011	2010	2009
Production:			
Natural gas (MMcf)	6,127	6,756	7,959
Oil (MBbl)	30	8	2
NGLs (MBbl)	—		
Total production (MMcfe)	6,304	6,803	7,971
Natural gas (MMcf/d)	16.8	18.5	21.8
Oil (MBbl/d)	0.1	—	—
NGL (MBbl/d)	—	—	—
Total daily production (MMcfe/d)	17.3	18.6	21.8
Average sales price per unit:			
Natural gas per Mcf, excluding impact of realized hedging activities	\$3.17	\$3.49	\$3.04
Natural gas per Mcf, including impact of realized hedging activities	\$4.71	\$4.05	\$4.57
Oil (per Bbl)	\$90.12	\$73.10	\$53.64
NGL (per Bbl)	\$—	\$—	\$—
Selected operating expenses (in thousands):			
Production taxes	\$153	\$40	\$35
Lease operating expenses	\$5,863	\$4,399	\$4,023
Transportation, treating and gathering	\$3,962	\$4,038	\$336
Selected operating expenses per Mcfe:			
Production taxes	\$0.02	\$0.01	\$—
Lease operating expenses	\$0.93	\$0.65	\$0.50
Transportation, treating and gathering	\$0.63	\$0.59	\$0.04
Production costs (1)	\$1.45	\$1.14	\$0.42

(1) Production costs include lease operating expense, insurance, gathering and workover expense and excludes ad valorem and severance taxes.

Due to the decline in natural gas prices, for fiscal year 2012, we currently plan to participate in the drilling of one gross (0.4 net) non-operated well in East Texas to test shallow oil potential in the Austin Chalk formation.

Powder River Basin, Wyoming and Montana

At December 31, 2011, we owned an average non-operated working interest of approximately 40% in approximately 35,900 gross (15,400 net) acres within the Powder River Basin of Wyoming and Montana. We commenced drilling operations on eight gross (2.8 net) non-operated wells in 2011 to prevent lease termination. These wells are currently suspended awaiting completion operations. Drilling in 2012 is anticipated to continue to be limited due to continued weakness in natural gas prices in the area. As a result of the 2011 decrease in drilling activity and reduced compression, our Powder River Basin production averaged 1.4 MMcfe/d for the year ended December 31, 2011 down from 1.9 MMcfe/d in 2010.

Markets and Customers

The success of our operations is dependent primarily upon prevailing and future prices for natural gas, oil, NGLs and condensate. The markets for natural gas, oil and NGLs have historically been and currently continue to be volatile. Natural gas,

6

---

Table of Contents

Index to Financial Statements

oil and NGLs prices are beyond our control.

We contract to sell natural gas from our properties with spot market contracts that vary with market forces on a daily basis. While overall natural gas prices at major markets, such as Henry Hub in Erath, Louisiana, may have some impact on regional prices, the regional natural gas price at our production facilities may move somewhat independently of broad industry price trends. Because some of our operations are located in specific regions, we are directly impacted by regional natural gas prices in those regions regardless of pricing at major market hubs. We do not own or operate any natural gas lines or distribution facilities and rely on third parties to construct additional interstate pipelines to increase our ability to bring our production to market. Any significant change affecting these facilities or our failure to obtain timely access to existing or future facilities on acceptable terms could restrict our ability to conduct normal operations. Delays in the commencement of operations of new pipelines, the unavailability of new pipelines or other facilities due to market conditions, mechanical reasons or otherwise could have an adverse impact on our results of operations and financial condition.

There are limited natural gas purchaser and transporter alternatives currently available in our Hilltop area of East Texas, where ETC Texas Pipeline, Ltd. ("ETC") provides for the treating, purchase and transportation of substantially all of our natural gas production from this area. Our deep Bossier production is transported to the Katy Hub in Katy, Texas, where numerous parties are available to purchase our natural gas production. Our Powder River Basin natural gas is sold under spot market contracts to major pipeline and natural gas marketing companies. Our West Virginia production is sold on the spot market to regional pipeline companies.

Our oil, NGLs and condensate production in East Texas and the Appalachian Basin is sold under spot sales transactions at market prices. The availability and price responsiveness of the multiple oil and condensate purchasers provides for a highly competitive and liquid market for oil sales.

During December 2010, we, along with Atinum, entered into a gas purchase agreement with SEI Energy, LLC ("SEI") with respect to our Marshall County, West Virginia production. The initial term of the gas purchase agreement is five years with the option to extend the term of the gas purchase agreement for an additional five year period. Our Marshall County, West Virginia production is dedicated to SEI for the term of the gas purchase agreement. SEI will purchase all hydrocarbon production, including all natural gas, condensate and natural gas liquids. SEI has an agreement to utilize the new Caiman Energy Midstream, LLC ("Caiman") midstream facilities, including its 120.0 MMcf per day Fort Beeler processing plant located in Marshall County, West Virginia for transporting and processing. In order to secure access to the Caiman facilities, we, Atinum and SEI dedicated all hydrocarbons purchased and produced in Marshall County, West Virginia for a term of ten years. During 2011, our operated production and sales in West Virginia were impacted by issues with high line pressures on the Caiman gathering system. Caiman has subsequently corrected the majority of the high line pressure issues and reduced the impact of such on our production and sales in West Virginia.

On November 16, 2009, concurrent with the sale of our Hilltop gathering system in East Texas, our wholly-owned subsidiary entered into a gas gathering agreement effective November 1, 2009 with Hilltop Resort GS, LLC (the "Hilltop Gathering Agreement") for a term of 15 years. The Hilltop Gathering Agreement covers delivery of our gross production of natural gas in the Hilltop area of East Texas to certain delivery points provided under the ETC Contract as well as additional delivery points that, from time to time, may be added. We also are obligated to connect new wells that we drill within the area covered by the agreement to the gathering system. The Hilltop Gathering Agreement provides for a minimum quarterly gathering gross production volume of 50.0 MMcf per day (35.0 MMcf per day net to us) times the number of days in the quarter for five years from the effective date of November 1, 2009. If quarterly production is less than the minimum quarterly requirement, the gathering fee is payable on such deficit. If excess quarterly production exists, such excess is carried forward to offset any future deficit quarters. The gathering fee on the initial gross 25 Bcf of production is \$0.325 per Mcf, reducing in steps to \$0.225 per Mcf when cumulative gross production reaches 300 Bcf.

In March 2008, we entered into formal agreements with ETC for the treating, purchase and transportation of substantially all of our natural gas production from the Hilltop area of East Texas (the "ETC Contract"). The ETC

Contract was effective as of September 1, 2007 and has a term of 10 years. ETC currently provides us with 50.0 MMcf per day of treating capacity and 150.0 MMcf per day of transportation capacity of production from our wells located in Leon and Robertson Counties, Texas.

The following table provides information regarding our significant customers and the percentages of natural gas, oil and NGLs revenues, excluding realized hedge impact, which they represented for the periods indicated:

7

---

Table of ContentsIndex to Financial Statements

	For the Years Ended December 31,					
	2011		2010		2009	
ETC	69	%	86	%	85	%
Enserco Energy, Inc.	6	%	9	%	13	%
Plains Marketing LP	10	%	2	%	—	%
SEI	8	%	—	%	—	%

ETC purchases substantially all of our East Texas natural gas production and Plains Marketing LP (“Plains”) purchases substantially all of our East Texas oil production. SEI purchases the majority of our Appalachian natural gas, oil and NGLs production and Enserco purchases substantially all of our Powder River Basin natural gas production. Management believes that the loss of either ETC, SEI, Plains or Enserco would not have a long-term material adverse impact on our financial position or results of operations, as there are other purchasers operating in the areas.

**Competition**

The natural gas and oil industry is intensely competitive and speculative in all of its phases. We encounter competition from other natural gas and oil companies in all areas of our operations. In seeking suitable natural gas and oil properties for acquisition, we compete with other companies operating in our areas of interest, including large natural gas and oil companies and other independent operators, many of whom have greater financial resources and, in many instances, have been engaged in the exploration and production business for a much longer time than we have. Many of our competitors also have substantially larger operating staffs than we do. Many of these competitors not only explore for and produce natural gas and oil but also market natural gas and oil and other products on a regional, national or worldwide basis. These competitors may be able to pay more for productive natural gas and oil properties and exploratory prospects and define, evaluate, bid for and purchase a greater number of properties and prospects than us. In addition, these competitors may have a greater ability to continue exploration activities during periods of low market prices. Our ability to acquire additional properties and to discover reserves in the future will depend on our ability to evaluate and select suitable properties and to consummate transactions in a highly competitive environment. Prices of our natural gas and oil production are controlled by market forces. Competition in the natural gas and oil exploration industry, however, also exists in the form of competition to acquire leases and obtain favorable transportation prices. We are smaller and have a more limited operating history than most of our competitors and may have difficulty acquiring additional acreage and/or projects and may have difficulty arranging for the transportation of our production. We also face competition in obtaining natural gas and oil drilling rigs and in providing the manpower to operate them and provide related services.

**Seasonal Nature of Business**

Generally, the demand for natural gas decreases during the summer months and increases during the winter months. Seasonal anomalies such as mild winters or abnormally hot summers sometimes lessen this fluctuation. In addition, certain natural gas users utilize natural gas storage facilities and purchase some of their anticipated winter requirements during the summer. This can also lessen seasonal demand fluctuations. Seasonal weather conditions and lease stipulations can limit our drilling and producing activities and other natural gas and oil operations in certain areas. These seasonal anomalies can increase competition for equipment, supplies and personnel during the spring and summer months, which could lead to shortages, increase our costs or delay our operations.

**U.S. Governmental Regulation**

Our natural gas and oil exploration, production and related operations are subject to extensive rules and regulations promulgated in the United States. These laws and regulations, all of which are subject to change from time to time, include matters relating to land tenure; drilling and production practices, such as discharge permits and the spacing of wells; the disposal of water resulting from operations and the processing, handling and disposal of hazardous materials, such as hydrocarbons and naturally occurring radioactive materials; bonding requirements; ongoing obligations for licensing; reporting requirements; marketing and pricing policies; royalties; taxation; and foreign trade and investment.

Failure to comply with governmental rules and regulations can result in substantial penalties. Furthermore, we could be liable for personal injuries, property damage, spills, discharge of hazardous materials, reclamation costs, remediation, clean-up costs and other environmental damages as a consequence of acquiring a natural gas or oil prospect or acreage.

8

---

Table of Contents

Index to Financial Statements

The regulatory burden on the natural gas and oil industry increases our cost of doing business and affects our financial condition. Although we believe we are in substantial compliance with all applicable laws and regulations, we are unable to predict the future cost or impact of complying with such laws because those laws and regulations are frequently amended or reinterpreted. We are unable to predict what additional legislation or amendments may be proposed that will affect our operations or when any such proposals, if enacted, might become effective. We do not expect that any of these laws would affect us in a materially different manner than any other similarly sized natural gas and oil company operating in the United States.

Regulation of Exploration and Production

Regulation of Production

The production of natural gas and oil is subject to extensive regulation under a wide range of federal, state and local statutes, rules, orders and regulations. Federal, state and local statutes and regulations require, among other things, permits for drilling operations, drilling bonds and reports concerning operations. The states in which we own and operate properties have regulations governing conservation matters, including some provisions for the unitization or pooling of the natural gas and oil properties; the establishment of maximum rates of production from natural gas and oil wells; the spacing of wells; and the plugging and abandonment of wells and removal of related production equipment. These and other regulations can limit the amount of the natural gas and oil we can produce from our wells, limit the number of wells we can drill, or limit the locations at which we can conduct drilling operations. Moreover, each state generally imposes a production or severance tax with respect to production and sale of natural gas, natural gas liquids and crude oil within its jurisdiction.

Regulation of Sales of Natural Gas

The price at which we buy and sell natural gas is currently not subject to federal rate regulation and, for the most part, is not subject to state regulation. However, with regard to our physical purchases and sales of these energy commodities, and any related hedging activities that we undertake, we are required to observe anti-market manipulation laws and related regulations enforced by the Federal Energy Regulatory Commission (“FERC”) and/or the Commodity Futures Trading Commission (“CFTC”). See the discussion below of “Other Federal Laws and Regulations Affecting Our Industry – Energy Policy Act of 2005”. Should we violate the anti-market manipulation laws and regulations, we could also be subject to related third party damage claims by, among others, market participants, sellers, royalty owners and taxing authorities. In addition, pursuant to Order 704 (defined below), we may be required to annually report to FERC on May 1 of each year information regarding natural gas purchase and sale transactions depending on the volume of natural gas transacted during the prior calendar year. See the discussion below of “Other Federal Laws and Regulations Affecting Our Industry – FERC Market Transparency Rules.”

Regulation of Availability, Terms and Cost of Pipeline Transportation

The availability, terms and cost of transportation can significantly affect sales of natural gas. FERC regulates interstate natural gas pipeline transportation rates and service conditions, which affect the marketing of natural gas produced by us and the revenues received by us for sales of such natural gas. FERC requires interstate pipelines to offer available firm transportation capacity on an open access, non-discriminatory basis to all natural gas shippers. FERC frequently reviews and modifies its regulations regarding the transportation of natural gas with the stated goal of fostering competition within all phases of the natural gas industry. In addition, with respect to production onshore or in state waters, the intra-state transportation of natural gas would be subject to state regulatory jurisdiction as well. The ability of our facilities to deliver natural gas into third party natural gas pipeline facilities is directly impacted by the gas quality specifications required by those pipelines. In 2006, FERC issued a policy statement on provisions governing gas quality and interchangeability in the tariffs of interstate gas pipeline companies and a separate order declining to set generic prescriptive national standards. FERC strongly encouraged all natural gas pipelines subject to its jurisdiction to adopt, as needed, gas quality and interchangeability standards in their FERC gas tariffs modeled on the interim guidelines issued by a group of industry representatives headed by the Natural Gas Council (the “NGC+ Work Group”), or to explain how and why their tariff provisions differ. We have no way to predict, however, whether FERC will approve of gas quality specifications that materially differ from the NGC+ Work Group’s interim

guidelines for such an interconnecting pipeline.

State laws and regulations generally govern the gathering and intrastate transportation of natural gas. Natural gas gathering systems in the states in which we operate are generally required to offer services on a non-discriminatory basis, and are subject to state ratable take and common purchaser statutes. Ratable take statutes generally require gatherers to take, without undue discrimination, natural gas production that may be tendered to the gatherer for handling. Similarly, common purchaser statutes generally require gatherers to purchase without discrimination in favor of one producer over another producer or one source of supply over another source of supply.

Table of Contents

Index to Financial Statements

Other Federal Laws and Regulations Affecting Our Industry

Energy Policy Act of 2005. Under the Energy Policy Act of 2005 (the “EPAct 2005”), Congress made it unlawful for any entity, including otherwise non-jurisdictional producers of natural gas, to use any deceptive or manipulative device or contrivance in connection with the purchase or sale of natural gas or the purchase or sale of transportation services regulated by the FERC that violates the FERC’s rules. FERC’s rules implementing the provision of EPAct 2005 make it unlawful for any entity in connection with the purchase or sale of natural gas subject to the jurisdiction of FERC, or the purchase or sale of transportation services subject to the jurisdiction of FERC, directly or indirectly, to use or employ any device, scheme or artifice to defraud; to make any untrue statement of material fact or omit to make any such statement necessary to make the statements made not misleading; or to engage in any act or practice that operates as a fraud or deceit upon any person. EPAct 2005 also gives the FERC authority to impose civil penalties for violations of the Natural Gas Act and the Natural Gas Policy Act up to \$1,000,000 per day per violation. While EPAct 2005 reflects a significant expansion of the FERC’s enforcement authority, we do not anticipate that we will be affected by that statute any differently than other producers of natural gas.

FERC Market Transparency Rules. In 2007, FERC issued a final rule on the annual natural gas transaction reporting requirements, as amended by subsequent orders on rehearing (“Order 704”). Under Order 704, wholesale buyers and sellers of more than 2.2 million MMBtu of physical natural gas in the previous calendar year including interstate and intrastate natural gas pipelines, natural gas gatherers, natural gas processors and natural gas marketers are now required to report on Form No. 552 on May 1 of each year aggregate volumes of natural gas purchased or sold at wholesale in the prior calendar year to the extent such transactions utilize, contribute to or may contribute to the formation of price indices. It is the responsibility of the reporting entity to determine which individual transactions should be reported based on the guidance of Order 704.

Additional proposals and proceedings that might affect the natural gas industry are pending before Congress, FERC and the courts. We cannot predict the ultimate impact of these or the above regulatory changes to our natural gas operations. We do not believe that we would be affected by any such FERC action materially differently than other natural gas companies with whom we compete.

Additional proposals and proceedings that might affect the natural gas industry are considered from time to time by Congress, FERC, state regulatory bodies and the courts. We cannot predict when or if any such proposals might become effective or their effect, if any, on our operations. The natural gas industry historically has been closely regulated; thus, there is no assurance that the less stringent regulatory approach recently pursued by FERC and Congress will continue indefinitely into the future. We do not believe that we will be affected by any action taken in a materially different way than other natural gas producers, gatherers and marketers with which we compete.

Federal Regulation of Sales and Transportation of Crude Oil. The oil industry is also extensively regulated by numerous federal, state and local authorities. Prices for crude oil and condensate are not currently regulated and are made at negotiated prices. Nevertheless, Congress could reenact price controls in the future.

In a number of instances, however, the ability to transport and sell such products on interstate pipelines is dependent on pipelines whose rates, terms and conditions of service are subject to FERC jurisdiction under the Interstate Commerce Act (“ICA”). The ICA requires that pipelines maintain a tariff on file with FERC. The tariff sets forth the established rate as well as the rules and regulations governing the service. The ICA requires, among other things, that rates on interstate common carrier pipelines be “just and reasonable.” The ICA permits challenges to existing rates and authorizes FERC to investigate such rates to determine whether they are just and reasonable. If, upon completion of an investigation, FERC finds that the existing rate is unlawful, it is authorized to require the carrier to refund the revenues in excess of the prior tariff collected during the pendency of the investigation and, in some cases, reparations for the two (2) year period prior to the filing of a complaint. We do not believe, however, that these regulations affect us any differently than other producers.

Intrastate oil pipeline transportation rates are subject to regulation by state regulatory commissions. The basis for intrastate oil pipeline regulation and the degree of regulatory oversight and scrutiny given to intrastate oil pipeline rates varies from state to state. Insofar as effective interstate and intrastate rates are equally applicable to all

comparable shippers, we believe that the regulation of oil transportation rates will not affect our operations in any way that is of material difference from those of our competitors who are similarly situated.

Further, interstate and intrastate common carrier oil pipelines must provide service on a non-discriminatory basis. Under this open access standard, common carriers must offer service to all similarly situated shippers requesting service on the same terms and under the same rates. When oil pipelines operate at full capacity, access is governed by pro-rationing provisions set forth in the pipelines' published tariffs. Accordingly, we believe that access to oil pipeline transportation services generally will be available to us to the same extent as to our similarly situated competitors.

Table of Contents

Index to Financial Statements

Our operations are subject to extensive and continually changing regulation affecting the natural gas and oil industry. Many departments and agencies, both federal and state are authorized by statute to issue, and have issued, rules and regulations binding on the natural gas and oil industry and its individual participants. The failure to comply with such rules and regulations can result in substantial penalties. The regulatory burden on the natural gas and oil industry increases our cost of doing business and, consequently, affects our profitability. We do not believe that we are affected in a significantly different manner by these regulations than are our competitors.

U.S. Environmental Regulation

Our natural gas and oil exploration and production operations, and similar operations that we do not operate but in which we own a working interest, are subject to stringent federal, regional, state and local environmental laws and regulations governing environmental protection as well as the discharge of substances into the environment. Environmental laws are implemented principally by the U.S. Environmental Protection Agency (“EPA”), the Department of Transportation, the Department of the Interior and other comparable state agencies. These laws and regulations may require that permits, including drilling permits, be obtained before conducting regulated activities; restrict the types, quantities and concentrations of various substances that can be released into the environment as a result of natural gas and oil drilling, production and processing activities; suspend, limit or prohibit construction, drilling and other activities in certain lands lying within wilderness, wetlands and other protected areas; require remedial measures to mitigate pollution from historical and on-going operations such as the use of pits and plugging of abandoned wells and impose liabilities for pollution resulting from such operations; and restrict injection of liquids into subsurface strata that may contaminate groundwater. Governmental authorities have the power to enforce compliance with their laws, regulations and permits, and violations may result in the issuance of injunctions limiting or prohibiting operations as well as administrative, civil and even criminal penalties. The effects of these laws and regulations, as well as the assessment of other laws or regulations that are adopted in the future, could have a material adverse impact on our operations and other operations in which we own an interest.

We believe that we are in substantial compliance with existing applicable environmental laws and regulations. However, it is possible that new environmental laws and regulations or the modification or more stringent enforcement of existing laws and regulations could have a material adverse effect on our operations and other operations in which we own an interest. As a general matter, the recent trend in environmental legislation and regulation is toward stricter standards, and this trend will likely continue. To date, we have not been required to expend significant capital expenditures or other resources in order to satisfy existing applicable environmental laws and regulations. However, there is no assurance that costs to comply with existing and any new environmental laws and regulations in the future will not be material. In addition, if substantial liabilities to third parties or governmental entities are incurred, the payment of such claims may reduce or eliminate the funds available for project investment or result in loss of our properties. Moreover, a serious incident of pollution may result in the suspension or cessation of operations in the affected area. Although we maintain insurance coverage against costs of clean-up operations, no assurance can be given that we are fully insured against all such potential risks. The imposition of any of these liabilities or compliance obligations on us may have a material adverse effect on our financial condition and results of operations.

The following is a summary of some of the more significant existing environmental laws to which our business operations are subject.

Hazardous Substances and Wastes

The Comprehensive Environmental Response, Compensation and Liability Act, as amended (“CERCLA”), also known as the Superfund law and analogous state laws impose strict, and, under certain circumstances, joint and several liability without regard to fault or legality of conduct on persons who are considered to have contributed to the release of a “hazardous substance” into the environment. These persons include the owner or operator of the site where the release occurred and companies that transported, disposed or arranged for the disposal of the hazardous substance released at the site. Under CERCLA, these “responsible parties” may be liable for the costs of cleaning up the hazardous substances that have been released into the environment, for damages to natural resources and for the costs

of certain health studies. CERCLA also authorizes the EPA and, in some cases, third parties to take actions in response to threats to the public health or the environment and to seek to recover from the responsible classes of persons the costs they incur. It is not uncommon for neighboring land owners and other third parties to file claims for personal injury and property damage allegedly caused by the hazardous substances released into the environment. Although CERCLA currently excludes “petroleum” and “natural gas, natural gas liquids, liquefied natural gas or synthetic gas useable for fuel” from the definition of “hazardous substance,” our operations as well as other operations in which we own an interest generate materials that are subject to regulation as hazardous substances under CERCLA. The scope of financial liability under CERCLA involves inherent uncertainties. The Resource Conservation and Recovery Act, as amended (“RCRA”), and comparable state laws regulate the

Table of Contents

Index to Financial Statements

management, treatment, storage and disposal of hazardous and non-hazardous solid wastes. Our operations, and other operations in which we own an interest, generate wastes, including hazardous wastes that are subject to RCRA and comparable state laws. We believe that these operations are currently complying in all material respects with applicable RCRA requirements. Although RCRA currently exempts certain natural gas and oil exploration and production wastes from the definition of hazardous waste, we cannot assure that this exemption will be preserved in the future. For instance, in September 2010, the Natural Resource Defense Council filed a petition for rulemaking with the EPA requesting reconsideration of the continued application of this RCRA exclusion, but, to date, the EPA has not taken any action on the petition. Repeal or modification of this exception or similar exemptions in state law could increase the amount of hazardous waste we are required to manage and dispose of and could cause us to incur increased operating costs, which could have a significant impact on us as well as the natural gas and oil industry in general.

We currently own, lease, own a working interest in, or operate numerous properties that for many years have been used by third parties for the exploration and production of natural gas and oil. Although we utilized operating and disposal practices that were standard in the industry at the time, hazardous substances, wastes or hydrocarbons may have been released on or under the properties owned or leased by us or in which we own an interest, or on or under other locations, including off-site locations, where such substances have been taken for disposal or recycling. In addition, many of these properties have been operated by third parties or by previous owners or operators whose treatment and disposal of hazardous substances, wastes, or hydrocarbons was not under our control. These properties and the substances disposed or released on them may be subject to CERCLA, RCRA and analogous state laws. Under such laws, we could be required to remove previously disposed substances and wastes (including substances disposed of or released by prior owners or operators), remediate contaminated property (including groundwater contamination) or perform remedial plugging or pit closure operations to prevent future contamination.

Water Discharges

Our operations and other operations in which we own a working interest are subject to the Clean Water Act, as amended (“CWA”), as well as the Oil Pollution Act, as amended (“OPA”), and analogous state laws. These laws and their implementing regulations impose detailed requirements and strict controls regarding the discharge of pollutants, including spills and leaks of oil and other substances, into federal and state waters, including wetlands. In addition, depending on the location, discharges from or the withdrawal of water for use in our operations may be subject to regulation by regional or local regulatory authorities. Under the CWA and the OPA, any unauthorized release of pollutants from operations could cause us to become subject to the costs of remediating a release, including administrative, civil or criminal fines or penalties in addition to OPA specified damages, such as damages for loss of use and natural resource damages. In addition, in the event that spills or releases of produced water from natural gas and oil production operations were to occur, we would be subject to spill notification and response requirements under the CWA or the equivalent state regulatory program. Depending on the nature and location of these operations, spill response plans may also have to be prepared and implemented.

Our natural gas and oil exploration and production operations, and other operations in which we own an interest, generate produced water as a waste material, which is subject to regulation under the CWA, the Safe Drinking Water Act, as amended (“SDWA”), or an equivalent state regulatory program. Naturally occurring groundwater is also typically produced by coal bed methane (“CBM”) production in our operations or in other operations in which we own an interest. This produced water is disposed of by injection into the subsurface through disposal wells permitted under the SDWA or an equivalent state regulatory program, discharge to surface water in compliance with permits issued by regulatory agencies pursuant to the CWA or an equivalent state program, or in evaporation ponds. To date, we believe that the produced water generated by our operations has been discharged or disposed of in substantial compliance with applicable environmental laws. Nonetheless, in connection with CBM production in the Powder River Basin, a concern of many operators in the Powder River Basin is the potential for opposition by individuals or groups to the issuance of a permit for the discharge or disposal of water generated by production activities. Such opposition could result in delays, limitations or denials with respect to environmental or other approvals necessary to develop our

acreage in the Powder River Basin, which could adversely affect our financial condition or results of operations.

#### Hydraulic Fracturing

Hydraulic fracturing is an important and common practice that is used to stimulate production of natural gas and/or oil from dense subsurface rock formations. The hydraulic fracturing process involves the injection of water, sand, and chemicals under pressure into the formation to fracture the surrounding rock and stimulate production. We routinely use hydraulic fracturing techniques in many of our drilling and completion programs. Hydraulic fracturing typically is regulated by state oil and natural gas commissions, but the EPA has asserted federal regulatory authority pursuant to the SDWA over certain hydraulic fracturing activities involving the use of diesel. In addition, legislation has been introduced before Congress to provide for federal regulation of hydraulic fracturing under the SDWA and to require disclosure of the chemicals used in the

Table of Contents

Index to Financial Statements

hydraulic fracturing process. At the state level, several states have adopted or are considering legal requirements that could impose more stringent permitting, disclosure, and well construction requirements on hydraulic fracturing activities. We believe that we follow applicable standard industry practices and legal requirements for groundwater protection in our hydraulic fracturing activities. Nonetheless, if new or more stringent federal, state, or local legal restrictions relating to the hydraulic fracturing process are adopted in areas where we operate, we could incur potentially significant added costs to comply with such requirements, experience delays or curtailment in the pursuit of exploration, development, or production activities, and perhaps even be precluded from drilling wells. In addition, certain governmental reviews are either underway or being proposed that focus on environmental aspects of hydraulic fracturing practices. The White House Council on Environmental Quality is coordinating an administration-wide review of hydraulic fracturing practices, and a committee of the United States House of Representatives has conducted an investigation of hydraulic fracturing practices. The EPA has commenced a study of the potential environmental effects of hydraulic fracturing on drinking water and groundwater, with initial results expected to be available by late 2012 and final results by 2014. Moreover, the EPA is developing effluent limitations for the treatment and discharge of wastewater resulting from hydraulic fracturing activities and plans to propose these standards by 2014. Other governmental agencies, including the U.S. Department of Energy and the U.S. Department of the Interior, are evaluating various other aspects of hydraulic fracturing. These ongoing or proposed studies, depending on their degree of pursuit and any meaningful results obtained, could spur initiatives to further regulate hydraulic fracturing under the federal SDWA or other regulatory mechanisms. Moreover, there have been public concerns expressed about naturally occurring radioactive materials being detected in flow back water resulting from hydraulic fracturing, particularly in the Marcellus Shale area. This concern could result in further regulation in the treatment, storage, handling and discharge of flow back water generated from these activities that, if implemented, could limit drilling or increase the costs of drilling in affected regions. To our knowledge, there have been no material citations, suits, or contamination of potable drinking water arising from our fracturing operations. We do not have insurance policies in effect that are intended to provide coverage for losses solely related to hydraulic fracturing operations; however, we believe our general liability and excess liability insurance policies would cover third-party claims related to hydraulic fracturing operations and associated legal expenses in accordance with, and subject to, the terms of such policies.

**Air Emissions**

The Clean Air Act, as amended (“CAA”), and comparable state laws and regulations govern emissions of various air pollutants through the issuance of permits and the imposition of other requirements. Air emissions from some equipment found at our operations or other operations in which we own an interest, such as gas compressors, are potentially subject to regulations under the CAA or equivalent state and local regulatory programs, although many small air emission sources are expressly exempt from such regulations. To the extent that these air emissions are regulated, they are generally regulated by permits issued by state regulatory agencies. To date, we believe that no unusual difficulties have been encountered in obtaining air permits. However, there is no assurance that in the future, we will not be required to incur capital expenditures in connection with maintaining or obtaining operating permits and approvals addressing air emission-related issues. For instance, in July 2011, the EPA proposed a range of new regulations that would establish new air emission controls for oil and natural gas production and natural gas processing, including, among other things, a new source performance standard for volatile organic compounds that would apply to hydraulically fractured wells, compressors, pneumatic controllers, condensate and crude oil storage tanks, and natural gas processing plants. The EPA is under a court order to finalize these proposed regulations by April 3, 2012.

Our CBM production operations involve the use of gas-fired compressors to produce or transport gas that is produced. Emissions of combustible by-products from compressors at one location may be large enough to subject the compressors to CAA and comparable state air quality regulation requirements for pre-construction and operating permits. To date, we believe that such gas-fired compressors that have been operated by us or at other operations in which we own a working interest have been operated in substantial compliance with obtained permits and the

applicable federal, state and local laws and regulations without undue cost to or burden on our business activities. Particulate matter is also emitted as a result of our CBM production operations, generally in connection with construction activities and vehicle traffic but, to date, we do not believe that there has been any substantial difficulty in complying with regulatory or permitting requirements applicable to particulate matter.

#### Climate Change

In response to findings in December 2009 that emissions of carbon dioxide, methane, and other greenhouse gases (“GHGs”) present an endangerment to public health and the environment because emissions of such gases are contributing to the warming of the Earth’s atmosphere and other climatic changes, the EPA has adopted regulations under existing provisions of the CAA that require a reduction in emissions of GHGs from motor vehicles and also trigger construction and operating permit review for GHG emissions from certain stationary sources. The EPA has asserted that the final motor vehicle GHG

Table of Contents

Index to Financial Statements

emission standards triggered Prevention of Significant Deterioration (“PSD”) and Title V permit requirements for stationary sources, commencing when the motor vehicle standards took effect on January 2, 2011. The EPA has published its final rule to address the permitting of GHG emissions from stationary sources under the PSD and Title V permitting programs, pursuant to which these permitting programs have been “tailored” to apply to certain stationary sources of GHG emissions in a multi-step process, with the largest sources first subject to permitting. It is anticipated that facilities required to obtain PSD permits for their GHG emissions also will be required to reduce those emissions according to “best available control technology” standards for GHG. These EPA rulemakings could adversely affect our operations and restrict or delay our ability to obtain air permits for new or modified facilities. In addition, the EPA adopted rules requiring the monitoring and reporting of GHGs from certain sources, including, among others, onshore and offshore oil and natural gas production facilities, which may include certain of our operations, on an annual basis. We are monitoring GHG emissions from our operations in accordance with the GHG emissions reporting rule and believe that our monitoring activities are in substantial compliance with applicable reporting obligations. In addition, Congress has actively considered legislation to reduce emissions of GHGs, and almost one-half of the states have already taken legal measures to reduce emissions of GHGs, primarily through the planned development of GHG emission inventories and/or regional GHG cap and trade programs. The adoption of any legislation or regulations that requires reporting of GHGs or otherwise limits emissions of GHGs from our equipment and operations could require us to incur costs to reduce emissions of GHGs associated with our operations or could adversely affect demand for the oil and natural gas that we produce. Finally, it should be noted that some scientists have concluded that increasing concentrations of GHGs in the Earth’s atmosphere may produce climate changes that have significant physical effects, such as increased frequency and severity of storms, floods and other climatic events; if any such effects were to occur, they could have an adverse effect on our exploration and production interests and operations.

Endangered Species Act

The federal Endangered Species Act, as amended (“ESA”), and similar state laws and other regulatory initiatives restrict activities that may affect endangered or threatened species or their habitats. While some of our operations may be located in or near areas that are designated as habitat for endangered or threatened species, we believe that we are in substantial compliance with the ESA. In these areas, we may be obligated to develop and implement plans to avoid potential adverse impacts to protected species, and we may be prohibited from conducting operations in certain locations or during certain seasons, such as breeding and nesting seasons, when our operations could have an adverse effect on the species. It is also possible that a federal or state agency could order a complete halt to our activities in certain locations if it is determined that such activities may have a serious adverse effect on a protected species. Moreover, as a result of a settlement approved by the U.S. District Court for the District of Columbia on September 9, 2011, the U.S. Fish and Wildlife Service is required to make a determination on listing of more than 250 species as endangered or threatened under the ESA over the next six years, through the agency's 2017 fiscal year. The presence of protected species or the designation of previously unidentified endangered or threatened species could impair our ability to timely complete well drilling and development and could cause us to incur additional costs arising from species protection measures or become subject to operating restrictions or bans in the affected areas.

Operations on Federal Lands

Performance of oil and gas exploration and production activities on federal lands, including Indian lands and lands administered by the federal Bureau of Land Management (“BLM”), may be subject to the National Environmental Policy Act, as amended (“NEPA”). NEPA requires federal agencies, including the BLM and the federal Bureau of Indian Affairs, to evaluate major agency actions, such as the issuance of permits that have the potential to significantly impact the environment. In the course of such evaluations, an agency will prepare an environmental assessment that assesses the potential direct, indirect and cumulative impacts of a proposed project and, if necessary, will prepare a more detailed environmental impact statement that may be made available for public review and comment. Our current and proposed exploration and production activities upon federal lands require governmental permits that are subject to the requirements of NEPA. We are not planning any drilling operations on BLM leased acreage in 2012. Our future development of any project on BLM leased acreage will be subject to completion of these environmental

assessments and any delays in such completion could result in delays in our exploration or production programs. Also, depending on the mitigation strategies recommended in the environmental assessments, we could incur added costs, which could be substantial.

**Other Laws and Regulations**

Our operations and other operations in which we own a working interest are also impacted by regulations governing the handling, transportation, storage and disposal of naturally occurring radioactive materials. Furthermore, owners, lessees and operators of natural gas and oil properties are also subject to increasing civil liability brought by surface owners and adjoining property owners. Such claims are predicated on the damage to or contamination of land resources occasioned by drilling and production operations and the products derived there from and are often based on negligence, trespass, nuisance, strict liability

Table of Contents

Index to Financial Statements

or fraud.

Industry Segment and Geographic Information

We operate in one industry segment, which is the exploration, development and production of natural gas and oil. As a result of the sale of our Australian operations in July 2009, our current operational activities are conducted primarily in and our consolidated revenues are primarily generated from markets exclusively in the United States.

Filings of Reserve Estimates with Other Agencies

Previously, we filed with the Canadian System for Electronic Document Analysis and Retrieval (“SEDAR”) revised forms related to our oil and natural gas reserves. The forms provided additional information to ensure compliance with Canadian National Instrument 51-101, “Standards of Disclosure for Oil and Gas Activities” (“NI 51-101”), as required by the Alberta Securities Commission and the Toronto Stock Exchange. The filings did not affect any of our filings with SEC and were not considered part of our Form 10-K. The Form 51-101F1, “Statement of Reserves Data and Other Oil and Gas Information,” revised Form 51-101F2, “Report of Reserve Data by Independent Qualified Reserves Evaluator”, and revised Form 51-101F3, “Report of Management and Directors on Oil and Gas Disclosure” for the year ended December 31, 2010 were filed during 2011 and can be found for viewing by electronic means on SEDAR at [www.sedar.com](http://www.sedar.com).

On December 16, 2011, the applicable provincial commissions in Canada issued a decision document which granted us exemptive relief from the disclosure requirements contained in NI 51-101. As a result, we are no longer required to comply with the requirements of NI 51-101 and accordingly, are not required to file Form 51-101F1, “Statement of Reserves Data and Other Oil and Gas Information,” revised Form 51-101F2, “Report of Reserve Data by Independent Qualified Reserves Evaluator,” and revised Form 51-101F3, “Report of Management and Directors on Oil and Gas Disclosure.” In lieu of such filings, we are permitted to provide disclosure with respect to our oil and gas activities in the form permitted by, and in accordance with, the legal requirements of the Securities Act, the Exchange Act and the rules and regulations of the SEC and the NYSE Amex. We are now required to file such disclosure on SEDAR as soon as practicable after such disclosure is filed with the SEC.

Insurance Matters

As is common in the oil and natural gas industry, we do not insure fully against all risks associated with our business either because such insurance may have been unavailable, because premium costs are considered not in line with our deemed exposure or the risk was deemed acceptable to self-insure. A loss not fully covered by insurance could have a materially adverse effect on our financial position, results of operations or cash flows.

We maintain insurance at industry customary levels to limit our financial exposure in the event of a substantial environmental claim resulting from sudden, unanticipated and accidental discharges of certain prohibited substances into the environment. Such insurance might not cover the complete amount of such a claim and would not cover fines or penalties for a violation of an environmental law nor would it cover a gradual pollution loss. In analyzing our operations and insurance needs, and in recognition that we have a large number of individual well locations with varied geographical distribution, we compared premium costs to the likelihood of material loss of production. Based on this analysis, we have elected, at this time, not to carry loss of production or business interruption insurance for our operations. We carry limited property insurance. Our control of well limits are based upon our assessment of the risk and consideration of the cost of the insurance.

Employees

As of March 5, 2012, we had 42 employees, all of whom are full time. We use the services of independent consultants and contractors to perform various professional services, including reservoir engineering, land, legal, regulatory reporting, environmental and tax services. On those properties where we are not the operator, we rely on outside operators to drill, produce and market our natural gas and oil. Our employees do not belong to a union or have a collective bargaining organization. Management considers its relationship with its employees to be good.

Corporate Offices

Our corporate office is located at 1331 Lamar Street, Suite 650, Houston, Texas 77010, where we lease 12,823 square feet. Additionally, we rent 6,375 square feet of office space in Clarksburg, West Virginia.

Available Information

Our website address is <http://www.gastar.com>. Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current

15

---

Index to Financial Statements

reports on Form 8-K and any amendments to those reports filed or furnished to the SEC pursuant to Section 13(a) or 15(d) of the Exchange Act are made available free of charge on our website as soon as reasonably practicable after we have electronically filed the material with or furnished it to the SEC.

The public may also read and copy any materials we have filed with the SEC at the SEC's Public Reference Room at 100 F Street, NE, Room 1580, Washington, DC 20549. Information on the operation of the Public Reference Room may be obtained by calling the SEC at 1-800-SEC-0330. The SEC maintains an internet website that contains our reports, proxy and information statements and our other SEC filings. The address of that site is [www.sec.gov](http://www.sec.gov).

None of the information on our website should be considered incorporated into or a part of this Form 10-K.

We also make available free of charge on our internet website at [www.gastar.com](http://www.gastar.com) under the "corporate governance" tab our:

• Code of Ethics;

• Corporate Governance Guidelines;

• Audit Committee Charter;

• Nominating and Governance Committee Charter;

• Compensation Committee Charter;

• Reserves Review Committee Charter; and

• Whistleblower Procedure.

Item 1A. Risk Factors

In addition to the other information set forth elsewhere in this Form 10-K, you should carefully consider the following material risk factors associated with our business and the oil and gas industry in which we operate. If any of the events described below occur, our business, financial condition, results of operations, liquidity or access to the capital markets could be materially adversely affected. There may be additional risks that are not presently material or known.

An investment in Gastar is subject to risks inherent in our business. The trading price of our common shares will be affected by the performance of our business relative to, among other things, competition, market conditions and general economic and industry conditions. The value of an investment in Gastar may decrease, resulting in a loss.

Risks Related to Our Business

We have incurred significant net losses since our inception and may incur additional significant net losses in the future.

With the exception of the one-time sale of our Australian properties in 2009, we have not been profitable since we started our business. Excluding after tax gains on the sale of assets, we incurred net losses of \$1.8 million, \$12.5 million and \$92.4 million for the years ended December 31, 2011, 2010 and 2009, respectively. Our capital has been employed in an increasingly expanding natural gas and oil exploration and development program, with our focus on finding significant natural gas and oil reserves and producing from them over the long-term rather than focusing on achieving immediate net income. The uncertainties described in this "Item 1A – Risk Factors" and elsewhere in this Form 10-K may impede our ability to ultimately find, develop and exploit natural gas and oil reserves. Our failure to achieve profitability in the future could materially adversely affect our ability to raise additional capital and continue our exploration and development program.

Natural gas and oil prices are volatile and further declines in natural gas and oil prices would continue to significantly and negatively affect our financial condition and results of operations. Additionally, our results are subject to commodity price fluctuations related to seasonal and market conditions and reservoir and production risks.

The success of our business depends primarily on the market prices of natural gas, oil and NGLs. Natural gas and oil commodity prices are set by broad market forces, which have been and will likely continue to be volatile in the future. For example, market prices for natural gas in the U.S. have declined substantially from 2008 price levels, and the rapid development of shale plays throughout North America has contributed significantly to this trend. Lower prices also may reduce the amount of natural gas or oil that we can produce economically. Prices for natural gas and oil are subject to wide fluctuations in response to relatively minor changes in the supply of and demand for natural gas, oil or

NGLs, market uncertainty and a variety of additional factors that are beyond our control. These factors include:  
•The domestic and foreign supply and demand of natural gas, oil and NGLs;

Table of Contents

Index to Financial Statements

- Volatile trading patterns in the commodity futures markets;
- Overall economic conditions and market uncertainty;
- Weather conditions;
- The cost of exploring for, developing, producing, transporting and marketing natural gas, oil and NGLs;
- The proximity to, and capacity of, natural gas pipelines and other transportation facilities;
- Political conditions in the Middle East and other oil producing regions, such as Venezuela;
- Domestic and foreign governmental regulations; and
- The price and availability of competing alternative fuels.

The long-term effect of these and other factors on the prices of natural gas, oil and NGLs are uncertain. Prolonged or substantial declines in these commodity prices may have the following effects on our business:

- Adversely affecting our financial condition, liquidity, ability to finance planned capital expenditures and results of operations;
- Reducing the amount of natural gas, oil and NGLs that we can produce economically;
- Causing us to delay or postpone some of our capital projects;
- Reducing our revenues, operating income or cash flows;
- Reducing the amounts of our estimated proved natural gas and oil reserves;
- Reducing the carrying value of our natural gas and oil properties;
- Reducing the standardized measure of discounted future net cash flows relating to natural gas and oil reserves; and
- Limiting our access to sources of capital, such as equity and long-term debt.

Our success is influenced by natural gas prices in the specific areas where we operate, and these prices may be lower than prices at major markets.

Regional natural gas prices may move independent of broad industry price trends. Because some of our operations are located outside major markets, we are directly impacted by regional natural gas prices regardless of Henry Hub or other major market pricing. During 2011, approximately 80% of our production was priced based on the Katy Hub basis point, 7% was priced on the Colorado Interstate Gas (“CIG”) basis point and 9% was priced based on the Columbia Gas Appalachia Pool. Continued reduced prices for natural gas may compel us to limit our drilling operations in our Hilltop area to focusing on lease maintenance. CIG natural gas prices are volatile and historically have traded at significantly less than Henry Hub prices, primarily due to limitations in available pipeline capacity for natural gas deliveries out of the Rocky Mountain area. CIG natural gas prices may decline further if supplies of natural gas in the Rocky Mountains increase. Our West Virginia natural gas production is priced using the Columbia Gas Appalachia Pool. At December 31, 2011, the Henry Hub price was \$4.12 per MMBtu, compared to our key basis point pricing of \$4.07 per MMBtu at the Katy Hub, \$3.93 per MMBtu for CIG and \$4.20 per MMBtu for the Columbia Gas Appalachia Pool. Low natural gas prices in any or all of the areas where we operate would negatively impact our financial condition and results of operations.

The limited availability or high costs of hydraulic fracturing services in the Marcellus Shale and East Texas areas could adversely affect our ability to execute our exploration and development plans within our budget and on a timely basis.

Our industry is cyclical and, from time to time, there is a shortage of materials, equipment, supplies and services, such as drilling rigs, fracture stimulation services and tubulars, well servicing equipment, gathering systems and transportation pipelines. During these periods, the costs and delivery times of those materials, equipment, supplies and services necessary to execute our drilling program are substantially greater. Shortages of fracturing equipment, water for hydraulic fracturing activities, and crews required for complex horizontal well completions in the Appalachia Marcellus Shale and East Texas deep Bossier and other zones could delay or adversely affect our development and exploration operations or cause us to incur significant expenditures that are not included in our capital budget. Delays could also have an adverse effect on our results of operations, including the timing of the initiation of production from new wells. See “—Federal and state legislation and regulatory initiatives relating to hydraulic fracturing could result in increased costs and additional operating restrictions or delays.” for a discussion of legislative and regulatory initiatives

that could significantly restrict hydraulic fracturing and therefore make it more difficult or costly for us to perform hydraulic fracturing.

Hedging of our production may result in losses or prevent us from benefiting to the fullest extent possible from increases in

17

---

Table of Contents

Index to Financial Statements

prices for natural gas and oil.

We have entered into New York Mercantile Exchange (“NYMEX”) futures contracts as hedges on approximately 8.0 Bcf of natural gas production in 2012 and 4.7 Bcf in 2013 as of December 31, 2011. Although these hedges may partially protect us from declines in natural gas prices, the use of these arrangements also may limit our ability to benefit from significant increases in the prices of natural gas.

Our development operations will require substantial capital expenditures.

The natural gas and oil industry is capital intensive. We make and expect to continue to make substantial growth capital expenditures in our business for the development, production and acquisition of natural gas and oil reserves. These expenditures will reduce the amount of cash available for distribution to our preferred stockholders. Our capital budget for 2012 totals \$134.2 million, which we expect to fund these capital expenditures using cash generated from our operations, additional borrowings under our Revolving Credit Facility or the issuance of Series A Preferred Stock by Gastar USA, or some combination thereof.

Our cash flows from operations and access to capital are subject to a number of variables, including:

- Our estimated proved natural gas and oil reserves;
- The amount of natural gas, oil and NGLs that we produce from existing wells;
- The prices at which we sell our production;
- The costs of developing and producing our natural gas and oil production;
- Our ability to acquire, locate and produce new reserves;
- The ability and willingness of banks to lend to us; and
- Our ability to access the capital markets.

If the borrowing base under our credit facility or our revenues decrease as a result of lower natural gas or oil prices, operating difficulties, declines in estimated reserves or production or for any other reason, we may have limited ability to obtain the capital necessary to sustain our operations at current levels. If additional capital is needed to fund our growth capital expenditures, our ability to access the capital markets for future equity or debt offerings may be limited by our financial condition at the time of any such financing or offering and the covenants in our existing debt agreements, as well as by adverse market conditions resulting from, among other things, general economic conditions and contingencies and uncertainties that are beyond our control.

Our failure to obtain the funds for necessary future growth capital expenditures could have a material adverse effect on our business, results of operations, financial condition and ability to pay distributions to our preferred stockholders. Even if we are successful in obtaining the necessary funds, the terms of such financings could limit our ability to pay distributions to our preferred stockholders. In addition, incurring additional debt may significantly increase our interest expense and financial leverage, and issuing additional preferred equity will increase the aggregate amount of cash required to make distributions to preferred stockholders.

Approximately 50% of our proved reserves are classified as proved developed non-producing or proved undeveloped and may ultimately prove to be less than estimated.

At December 31, 2011, approximately 50% of our total proved reserves were classified as proved developed non-producing or proved undeveloped. It will take substantial capital to recomplete or drill our non-producing and undeveloped locations. Our estimate of proved reserves at December 31, 2011 assumes that we will spend significant development capital expenditures to develop these reserves, including an estimated \$44.3 million and \$6.1 million in 2012 and 2013, respectively. Further, our drilling efforts may be delayed or unsuccessful, and actual reserves may prove to be less than current reserve estimates, which could have a material adverse effect on our financial condition, future cash flows and the results of operations.

Approximately 79% of our natural gas, oil and NGLs revenues before impact of realized hedges and 29% of our total proved reserves as of and for the year ended December 31, 2011 were attributable to our properties in East Texas. Any disruption in production, development of proved reserves, or our ability to process and sell natural gas from this area

would have a material adverse effect on our results of operations or reduce future revenues.

Our current production is geographically concentrated in East Texas. Production of the natural gas in East Texas could unexpectedly be disrupted or curtailed due to reservoir or mechanical problems. Our natural gas produced from this area contains levels of carbon dioxide and hydrogen sulfide that are above levels accepted by gas purchasers. This production must

18

---

Table of Contents

Index to Financial Statements

be treated by the purchaser. A majority of our East Texas production is processed by the purchaser. If the purchaser's facilities ceased to operate, were destroyed or otherwise needed replacement, it could require 60 to 90 days to replace or repair these facilities. A 60 to 90 day curtailment of our total East Texas production could reduce current revenues by an estimated \$2.5 million to \$3.9 million, before the impact of hedges, with a corresponding reduction in our cash flow. Moreover, an unexpected delay in developing proved reserves in this area due to capital constraints or changes in development plan could reduce future revenues.

There are a limited number of natural gas purchasers and transporters in the Hilltop area of East Texas. The loss of our current purchaser and transporter and an inability to locate another purchaser and transporter would have a material adverse effect on our financial condition and results of operations.

There are a limited number of natural gas transporters in the Hilltop area in East Texas. For the year ended December 31, 2011, ETC accounted for substantially all of our revenues from this area. If ETC were to cease purchasing and transporting our natural gas and we were unable to contract with another transporter, it would have a material adverse effect on our financial condition, future cash flows and the results of operations.

There are a limited number of natural gas purchasers and transporters in the Marcellus Shale in the Appalachia area of West Virginia and central and southwestern Pennsylvania. The loss of our current purchaser and transporter and an inability to locate another purchaser and transporter would have a material adverse effect on our financial condition and results of operations.

There are a limited number of natural gas purchasers and transporters in the Marcellus Shale in the Appalachia area of West Virginia and central and southwestern Pennsylvania. For the year ended December 31, 2011, SEI accounted for substantially all of our revenues from this area. If SEI were to cease purchasing and Caiman were to cease transporting our natural gas and we were unable to contract with another purchaser and/or transporter, it would have a material adverse effect on our financial condition, future cash flows and the results of operations.

Our ability to market our natural gas, oil and NGLs may be impaired by capacity constraints and availability of the gathering systems and pipelines that transport our natural gas and oil.

The availability of a ready market for our natural gas, oil and NGLs production, particularly in the Appalachian area, depends on the proximity of our reserves to and the capacity of natural gas gathering systems, pipelines and trucking or terminal facilities. We do not own or operate any natural gas lines or distribution facilities and rely on third parties to construct additional interstate pipelines to increase our ability to bring our production to market. We enter into agreements with companies that own pipelines used to transport natural gas from the wellhead to contract destination. Those pipelines are limited in size and volume of natural gas flow.

There are a limited number of natural gas purchasers and transporters in the Marcellus Shale in the Appalachia area of West Virginia and central and southwestern Pennsylvania and in the Hilltop area in East Texas. For the year ended December 31, 2011, SEI accounted for substantially all of our revenues from the Marcellus Shale and ETC accounted for substantially all of our revenues from the Hilltop area in East Texas. If SEI were to cease purchasing and Caiman were to cease transporting our natural gas in the Marcellus Shale and if ETC were to cease purchasing and transporting our natural gas in the Hilltop area of East Texas and we were unable to contract with another purchaser and/or transporter, it would have a material adverse effect on our financial condition, future cash flows and the results of operations.

Delays in the commencement of operations of new pipelines, the unavailability of the new pipelines or other facilities due to market conditions, mechanical reasons or otherwise could have an adverse impact on our results of operations and financial condition. Our Marcellus Shale production continues to be impacted by issues with high line pressures on the third-party operated gathering system. The operator of the gathering system anticipates having the line pressure issues alleviated by April 2012, but if they cannot be alleviated there may be further delays or curtailments in bringing our production to market. In West Virginia and southwestern Pennsylvania, key issues to development include limited pipeline infrastructure and access, water access and disposal issues to support operations and limited industry services. All of these factors could have an adverse effect on our ability to effectively conduct exploration and development activities.

Further, interstate transportation and distribution of natural gas is regulated by the federal government through the FERC. FERC sets rules and carries out administratively the oversight of interstate markets for natural gas and other energy policy. Additionally, state regulators have powers over sale, supply and delivery of natural gas and oil within their state borders. While we employ certain companies to represent our interests before state regulatory agencies, our interests may not receive favorable rulings from any state agency, or some future occurrence may drastically alter our ability to enter into contracts or deliver natural gas to the market.

Table of Contents

Index to Financial Statements

Natural gas and oil reserves are depleting assets, and the failure to replace our reserves would adversely affect our production and cash flows.

Our future natural gas and oil production depends on our success in finding or acquiring new reserves. If we fail to replace reserves, our level of production and cash flows would be adversely impacted. Production from natural gas and oil properties decline as reserves are depleted, with the rate of decline depending on reservoir characteristics. Our total proved reserves will decline as reserves are produced unless we conduct successful exploration and development activities and/or acquire properties containing proved reserves. Our ability to make the necessary capital investment to maintain or expand our asset base of natural gas and oil reserves would be impaired to the extent cash flow from operations is reduced and external sources of capital become limited or unavailable. Further, we may not be successful in exploring for, developing or acquiring additional reserves, which could have a material adverse effect on our financial condition, future cash flows and the results of operations.

Exploration is a high risk activity, and our participation in drilling activities may not be successful.

Our future success will largely depend on the success of our exploration drilling program. Participation in exploration drilling activities involves numerous risks, including the risk that no commercially productive natural gas or oil reservoirs will be discovered. The cost of drilling, completing and operating wells is often uncertain, and drilling operations may be curtailed, delayed or canceled as a result of a variety of factors, including, but not limited to:

• Unexpected drilling conditions;

• Blowouts, fires or explosions with resultant injury, death or environmental damage;

• Pressure or irregularities in formations;

• Environmental hazards, such as natural gas and oil leaks, pipeline or tank ruptures, and discharges of toxic gases or well fluids;

• Uncontrollable flows of natural gas, oil, brine water or drilling fluids;

• Equipment failures or accidents;

• Adverse weather conditions;

• Compliance with governmental requirements and laws, present and future; and

• Shortages or delays in the availability of drilling rigs and the delivery of equipment or obtaining water for hydraulic fracturing operations.

We use available seismic data to assist in the location of potential drilling sites. Even when properly used and interpreted, 2-D and 3-D seismic data and other visualization techniques are only tools used to assist geoscientists in identifying subsurface structures and hydrocarbon indicators. They do not allow the interpreter to know conclusively if hydrocarbons are present or economically producible. Poor results from our drilling activities would have a material adverse effect on our financial condition, future cash flows and results of operations. In addition, using seismic data and other advanced technologies involves substantial upfront costs and is more expensive than traditional drilling strategies, and we could incur losses as a result of these expenditures.

Reserve estimates depend on many factors and assumptions, including various assumptions that are based on conditions in existence as of the dates of the estimates, which may turn out to be inaccurate. Any material inaccuracies in these reserve estimates or underlying assumptions could materially affect the quantities and present values of our reserves.

The process of estimating natural gas and oil reserves is complex. It requires interpretations of available technical data and various assumptions, including assumptions relating to economic factors. Any significant inaccuracies in these interpretations or assumptions could materially affect the estimated quantities and present value of reserves.

There are many uncertainties inherent in estimating natural gas and oil reserves and their values, many of which are beyond our control. Reservoir engineering is a subjective process of estimating underground accumulations of natural gas or oil that cannot be measured in an exact manner. Estimates of economically recoverable natural gas or oil reserves and of future net cash flows necessarily depend on many variables and assumptions, such as:

• Historical natural gas or oil production from that area, compared with production from other producing areas;

•

Assumptions concerning the effects of regulations by governmental agencies;

Assumptions concerning future prices;

20

---

Table of Contents

Index to Financial Statements

- ◆ Assumptions concerning future operating costs;
- ◆ Assumptions concerning severance and excise taxes; and
- ◆ Assumptions concerning development costs and workover and remedial costs.

Any of these variables or assumptions could vary considerably from actual results. For these reasons, estimates of the economically recoverable quantities of natural gas or oil attributable to any particular group of properties, classifications of those reserves based on risk recovery and estimates of the future net cash flows expected from them prepared by different engineers, or by the same engineer at different times, may vary substantially. Because of this, our reserve estimates may materially change at any time.

You should not consider the present values of estimated future net cash flows referred to in this Form 10-K to be the current market value of the estimated reserves attributable to our properties. For 2011, 2010 and 2009, the estimated discounted future net cash flows from proved reserves are based on the 12-month unweighted arithmetic average of the first-day-of-the-month prices and costs in effect when the estimate is made, and for 2008, the estimated discounted future net cash flows from proved reserves are based on the December 31, 2008 spot price and costs in effect when the estimate was made. Current or actual future prices and costs may be materially higher or lower. Actual future net cash flows also will be affected by factors such as:

- ◆ The amount and timing of actual production;
- ◆ Supply and demand for natural gas or oil;
- ◆ Actual prices received for natural gas in the future being different than those used in the estimate;
- ◆ Curtailments or increases in consumption of natural gas or oil;
- ◆ Changes in governmental regulations or taxation; and
- ◆ The timing of both production and expenses in connection with the development and production of natural gas or oil properties.

In this Form 10-K, the net present value of estimated future net revenues at December 31, 2011 is calculated using the 12-month unweighted arithmetic average of the first-day-of-the-month price and a 10% discount rate. This price and rate are not necessarily the most appropriate price or discount factor based on prices and interest rates in effect from time to time and risks associated with our reserves or the natural gas and oil industry in general.

Future downward revisions of the present value of our proved reserves and increased drilling expenditures without current additions to proved reserves may lead to write downs in the carrying value of our natural gas and oil properties. We are subject to the full cost ceiling limitation which has resulted in past write-downs of estimated net reserves and may result in a write-down in the future if commodity prices continue to decline.

Under the full cost method of accounting, we are subject to quarterly calculations of a “ceiling” or limitation on the amount of our oil and gas properties that can be capitalized on our balance sheet. We may experience write downs of the carrying value of our oil and gas properties in the future if the present value of our proved natural gas and oil reserves is lower than our remaining unamortized capitalized costs. If the net capitalized costs of our oil and gas properties exceed the cost ceiling, we are subject to a ceiling test write-down of our estimated net reserves to the extent of such excess. If required, it would reduce earnings and impact stockholders’ equity in the period of occurrence and result in lower amortization expense in future periods. The discounted present value of our proved reserves is a major component of the ceiling calculation and represents the component that requires the most subjective judgments. The risk that we will be required to write down the carrying value of oil and natural gas properties increases when natural gas and crude oil prices are depressed or volatile. In addition, a write-down of proved oil and natural gas properties may occur if we experience substantial downward adjustments to our estimated proved reserves, if there are differences in timing between the incurrence of significant costs of exploration or development activities and the recognition of significant proved reserves resulting from such activities and if we experience unsuccessful drilling activities. Expense recorded in one period may not be reversed in a subsequent period even though higher natural gas and crude oil prices may have increased the ceiling applicable in the subsequent period.

Our inability to meet a financial covenant contained in the Revolving Credit Facility may adversely affect our liquidity, financial condition or results of operations.

We are subject to certain financial covenants which we are required to maintain under the Revolving Credit Facility (as defined herein) related to our working capital, cash flow and interest coverage ratio. If we breach a financial covenant and we are unable to cure such violation or obtain waivers from our lenders under the Revolving Credit Facility within the applicable

21

---

Table of Contents

Index to Financial Statements

cure periods, such violation will constitute an event of default under the Revolving Credit Facility, and our lenders could terminate any commitments they have to make available further funds, accelerate the due dates for the payments of all outstanding indebtedness and exercise their remedies as a secured creditor with respect to the collateral securing the Revolving Credit Facility, which is substantially all of our natural gas and oil properties.

If the counterparties to the derivative instruments we use to hedge our business risks default or fail to perform, we may be exposed to risks we had sought to mitigate, which could materially adversely affect our financial condition and results of operations.

We use hedges to mitigate our natural gas price risk with counterparties. If our counterparties fail or refuse to honor their obligations under these derivative instruments, our hedges of the related risk will be ineffective. This is a more pronounced risk to us in view of the recent stresses suffered by financial institutions. We cannot provide assurance that our counterparties will honor their obligations now or in the future. A counterparty's insolvency or inability or unwillingness to make payments required under terms of derivative instruments with us could have a material adverse effect on our financial condition and results of operations. At the date of filing of this Form 10-K, our only counterparties were BP Corporation North America Inc. and Bank of Montreal.

We are subject to various legal proceedings and claims. The cost of defending these lawsuits and any future lawsuits and any resulting judgments could be significant and could have a material adverse effect upon our financial condition.

We are subject to various significant legal proceedings and claims arising outside of the normal course of business. No assurance can be given regarding the outcome of these legal proceedings, and additional claims may arise. We are vigorously defending the Company in these matters. This litigation, regardless of outcome or merit, however, can result in substantial costs and diversion of resources from our business. These costs would be reflected in terms of dollar outlay as well as the amount of time, attention and other resources that our management would have to appropriate to the defense of such claims. Considerable legal, accounting and other professional services expenses related to these matters have been incurred to date and significant expenditures may continue to be incurred in the future. Although we cannot predict the ultimate outcome of these matters or the liability that could potentially result, continuing defense costs and any adverse outcome could adversely affect our business, financial condition and results of operations. For more information on our significant currently outstanding legal proceedings, see Note 15, "Commitments and Contingencies Litigation", to our consolidated financial statements included in this Form 10-K. Deficiencies of title to our leased interests could significantly affect our financial condition.

Our practice in acquiring exploration leases or undivided interests in natural gas and oil leases is not to incur the expense of retaining lawyers to examine the title to the mineral interest prior to executing the lease. Instead, we rely upon the judgment of lease brokers and others to perform the field work in examining records in the appropriate governmental or county clerk's office before leasing a specific mineral interest. This practice is widely followed in the industry. Prior to drilling an exploration well, the operator of the well will typically obtain a preliminary title review of the drillsite lease or spacing unit within which the proposed well is to be drilled to identify any obvious deficiencies in title to the well and, if there are deficiencies, to identify measures necessary to cure those defects to the extent reasonably possible. It does happen, from time-to-time, that the examination made by the operator's title lawyers reveals that the lease or leases are invalid, having been purchased in error from a person who is not the rightful owner of the mineral interest desired. In these circumstances, we may not be able to proceed with our exploration and development of the lease site or may incur costs to remedy a defect, which could affect our financial condition and results of operations. We currently are involved in a title litigation matter in East Texas. See Note 15, "Commitments and Contingencies – Litigation," to our consolidated financial statements included in this Form 10-K.

We are subject to stringent and complex laws and regulations, which may expose us to significant costs and liabilities and adversely affect the cost, manner or feasibility of conducting our business.

Our natural gas and oil exploration and production interest and operations are subject to stringent and complex federal, state, provincial and local laws and regulations relating to the operation and maintenance of our facilities, including laws regulating removal of natural resources from the ground, the discharge of materials into the

environment and otherwise relating to environmental protection. Natural gas and oil operations are also subject to federal, state, provincial and local laws and regulations which seek to maintain occupational health and safety standards by regulating the design and use of drilling methods and equipment.

These government authorities require various permits, including drilling permits, before conducting regulated activities and we cannot assure you that such permits will be received. The failure or delay in obtaining the requisite approvals or permits

Table of Contents

Index to Financial Statements

may adversely affect our business, financial condition and results of operations. Additionally, these laws and regulations impose numerous obligations and restrictions that are applicable to our interests and operations including, but not limited to:

- Drilling and abandonment bonds or other financial responsibility assurances;
- Restriction on types, quantities and concentration of materials that can be released into the environment;
- Reports concerning operations;
- Spacing of wells;
- Limits or prohibitions on drilling activities on certain lands lying within wilderness, wetlands and other protected areas;
- The application of specific health and safety criteria addressing worker protection;
- The imposition of substantial liabilities for pollution resulting from our operations;
- Limitations on access to properties, particularly in the Powder River Basin;
- Taxation; and
- Other regulatory controls on operating activities.

In addition, regulatory agencies have from time to time imposed price controls and limitations on production by restricting the flow rate of wells below actual production capacity in order to conserve supplies of natural gas and oil. Failure to comply with these laws and regulations applicable to our interests and operations could result in the assessment of administrative, civil and criminal penalties, the imposition of investigatory or remedial obligations and the issuance of orders enjoining or limiting some or all of our operations, any of which could have a material adverse effect on our financial condition. Legal requirements are sometimes unclear or subject to reinterpretation and may be amended in response to economic or political conditions. As a result, it is hard to predict the ultimate future cost of compliance with these requirements or their effect on our interests and operations. In addition, existing laws or regulations, as currently interpreted or reinterpreted in the future, or future laws or regulations may have a material adverse effect on our financial condition, future cash flows and the results of operations.

Federal and state legislation and regulatory initiatives relating to hydraulic fracturing could result in increased costs and additional operating restrictions or delays in the completion of natural gas and oil wells.

Hydraulic fracturing is an important and common practice that is used to stimulate production of hydrocarbons, particularly natural gas, from tight formations such as shales. The process involves the injection of water, sand and chemicals under pressure into formations to fracture the surrounding rock and stimulate production. We routinely use hydraulic fracturing techniques in many of our drilling and completion programs. The process is typically regulated by state oil and gas commissions, but the EPA recently asserted federal regulatory authority over hydraulic fracturing involving diesel under the SDWA's Underground Injection Control Program, and has begun the process of drafting guidance documents on regulating requirements for companies that plan to conduct hydraulic fracturing using diesel. In addition, legislation has been introduced before Congress to provide for federal regulation of hydraulic fracturing under the SDWA and to require disclosure of the chemicals used in the hydraulic fracturing process. At the state level, several states have adopted or are considering legal requirements that could impose more stringent permitting, disclosure, and well construction requirements on hydraulic fracturing activities. In the event that If new or more stringent federal, state, or local legal restrictions relating to the hydraulic fracturing process are adopted in areas where we operate, we could incur potentially significant added costs to comply with such requirements, experience delays or curtailment in the pursuit of exploration, development, or production activities, and perhaps even be precluded from drilling wells.

In addition, certain governmental reviews are either underway or being proposed that focus on environmental aspects of hydraulic fracturing practices. The White House Council on Environmental Quality is coordinating an administration-wide review of hydraulic fracturing practices, and a committee of the U.S. House of Representatives has conducted an investigation of hydraulic fracturing practices. The EPA has commenced a study of the potential environmental effects of hydraulic fracturing activities, with initial results expected to be available by late 2012 and final results by 2014. Moreover, the EPA is developing effluent limitations for the treatment and discharge of

wastewater resulting from hydraulic fracturing activities and plans to propose these standards by 2014. In addition, the U.S. Department of Energy and the U.S. Government Accountability Office are studying different aspects of how hydraulic fracturing might adversely affect the environment, and the U.S. Department of the Interior is considering disclosure requirements or other mandates for hydraulic fracturing on federal land, which, if adopted, would affect our operations on federal lands. These studies, depending on their results, could spur initiatives to regulate

Table of Contents

Index to Financial Statements

hydraulic fracturing under the SDWA or under newly established legislation.

We could incur significant costs and liabilities in responding to contamination that occurs as a result of our operations. There is inherent risk of incurring significant environmental costs and liabilities in the performance of our operations as a result of our handling of petroleum hydrocarbons and wastes, because of air emissions and wastewater discharges related to our operations, and due to historical industry operations and waste disposal practices. Under certain environmental laws and regulations, we could be subject to strict, joint and several liabilities for the removal or remediation of previously released materials or property contamination. Private parties, including the owners of properties upon which our wells are drilled and facilities where our petroleum hydrocarbons or wastes are taken for reclamation or disposal, also may have the right to pursue legal actions to enforce compliance as well as to seek damages for non-compliance with environmental laws and regulations or for personal injury or property or natural resource damages. Changes in environmental laws and regulations occur frequently, and any changes that result in more stringent or costly well drilling, construction, completion or water management activities, or waste control, handling, storage, transport, disposal or cleanup requirements could require us to make significant expenditures to attain and maintain compliance and may otherwise have a material adverse effect on our own results of operations, competitive position or financial condition.

The process of drilling for and producing natural gas and oil involves many operating risks that can cause substantial losses, and we may not have enough insurance to cover these risks adequately.

The natural gas and oil business involves many operating hazards, such as:

- Well blowouts, fires and explosions;
- Surface craterings and casing collapses;
- Road collapses;
- Uncontrollable flows of natural gas, oil, brine, water or well fluids;
- Pipe and cement failures;
- Formations with abnormal pressures;
- Stuck drilling and service tools;
- Pipeline or tank ruptures or spills;
- Natural disasters; and
- Environmental hazards, such as natural gas and oil leaks and discharge of toxic gases or well fluids.

Any of these events could cause substantial losses to us as a result of:

- Injury or death;
- Damage to and destruction of property, natural resources and equipment;
- Damage to natural resources due to underground migration of hydraulic fracturing fluids;
- Pollution and other environmental damage, including spillage or mishandling of recovered hydraulic fracturing fluids;
- Regulatory investigations and penalties;
- Suspension of operations; and
- Repair and remediation costs.

We could also be responsible for environmental damage caused by previous owners of property from whom we purchased leases. As a result, we may incur substantial liabilities to third parties or governmental entities. Although we maintain what we believe is appropriate and customary insurance for these risks, the insurance may not be available or sufficient to cover all of these liabilities. If these liabilities are not covered by our insurance, paying them could reduce or eliminate the funds available for exploration, development or acquisitions or result in the loss of our properties.

Certain U.S. federal income tax deductions currently available with respect to oil and gas exploration and development may be eliminated as a result of future legislation.

President Obama's budget proposal for the fiscal year 2012 recommended the elimination of certain key U.S. federal income tax preferences currently available to oil and gas exploration and production companies. These changes

include, but are

24

---

Table of Contents

Index to Financial Statements

not limited to, (i) the repeal of the percentage depletion allowance for oil and gas properties, (ii) the elimination of current deductions for intangible drilling and development costs, (iii) the elimination of the deduction for U.S. production activities, and (iv) the increase in the amortization period from two years to seven years for geophysical costs paid or incurred in connection with the exploration for, or development of, oil or gas within the United States. It is unclear whether any such changes will actually be enacted or, if enacted, how soon any such changes could become effective. The passage of any legislation as a result of the budget proposal or any other similar change in U.S. federal income tax law could affect certain tax deductions that are currently available with respect to oil and gas exploration and production.

Our natural gas and oil sales and our related hedging activities expose us to potential regulatory risks. The Federal Trade Commission, the FERC, and the CFTC hold statutory authority to monitor certain segments of the physical and futures energy commodities markets. These agencies have imposed broad regulations prohibiting fraud and manipulation of such markets. With regard to our physical sales of natural gas and oil and any related hedging activities that we undertake, we are required to observe the market-related regulations enforced by these agencies, which hold substantial enforcement authority. Our sales may also be subject to certain reporting and other requirements. Failure to comply with such regulations, as interpreted and enforced, could have a material adverse effect on our business, results of operations, financial condition and our ability to make cash distributions to our unitholders.

To the extent that we enter into transportation contracts with natural gas pipelines that are subject to FERC regulation, we are subject to FERC requirements related to use of such capacity. Any failure on our part to comply with the FERC's regulations and policies, or with an interstate pipeline's tariff, could result in the imposition of civil and criminal penalties.

The enactment of the Dodd-Frank Act could have an adverse impact on our ability to hedge risks associated with our business.

Congress recently adopted comprehensive financial reform legislation that establishes federal oversight and regulation of the over-the-counter derivatives market and entities, including us, that participate in that market. The new legislation, known as the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), was signed into law by the President on July 21, 2010 and requires CFTC and the SEC to promulgate rules and regulations implementing the new legislation within 360 days from the date of enactment. In its rulemaking under the Dodd-Frank Act, the CFTC has proposed regulations to set position limits for certain futures and option contracts in the major energy markets and for swaps that are their economic equivalents. Certain bona fide hedging transactions or positions would be exempt from these position limits. It is not possible at this time to predict when the CFTC will finalize these regulations. The financial reform legislation may also require us to comply with margin requirements and with certain clearing and trade-execution requirements in connection with our derivative activities, although the application of those provisions to us is uncertain at this time. The financial reform legislation may also require the counterparties to our derivative instruments to spin off some of their derivatives activities to a separate entity, which may not be as creditworthy as the current counterparty. The new legislation and any new regulations could significantly increase the cost of derivative contracts (including through requirements to post collateral which could adversely affect our available liquidity), materially alter the terms of derivative contracts, reduce the availability of derivatives to protect against risks we encounter, reduce our ability to monetize or restructure our existing derivative contracts, and increase our exposure to less creditworthy counterparties. If we reduce our use of derivatives as a result of the legislation and regulations, our results of operations may become more volatile and our cash flows may be less predictable, which could adversely affect our ability to plan for and fund capital expenditures. Finally, the legislation was intended, in part, to reduce the volatility of oil and natural gas prices, which some legislators attributed to speculative trading in derivatives and commodity instruments related to oil and natural gas. Our revenues could therefore be adversely affected if a consequence of the legislation and regulations is to lower commodity prices. Any of these consequences could have a material adverse effect on us, our financial condition and our results of operations.

Climate change legislation or regulations restricting emissions of GHGs could result in increased operating costs and reduced demand for the oil and natural gas we produce.

In response to findings made by the EPA in December 2009 that emissions of GHGs present an endangerment to public health and the environment, the EPA has adopted regulations under existing provisions of the CAA that require a reduction in emissions of GHGs from motor vehicles and also that require certain construction and operating permit reviews for GHG emissions from certain stationary sources. The EPA rules addressing the permitting of GHG emissions from stationary sources under the Clean Air Act Prevention of Significant Deterioration ("PSD") construction and Title V operating permit programs have tailored the PSD and Title V permitting programs to apply to certain stationary sources of GHG emissions in a multi-step process, with the largest sources first subject to permitting. In addition, the EPA adopted rules requiring the monitoring and

Table of Contents

Index to Financial Statements

reporting of GHGs from certain sources, including, among others, onshore and offshore oil and natural gas production facilities. Also, Congress has, from time to time, considered legislation to reduce emissions of GHGs, and almost one-half of the states have already taken legal measures to reduce emissions of GHGs, primarily through the planned development of GHG emission inventories and/or regional GHG cap and trade programs. The adoption of any legislation or regulations that requires reporting of GHGs or otherwise limits emissions of GHGs from our equipment and operations could require us to incur significant added costs to reduce emissions of GHGs associated with our operations or could adversely affect demand for the oil and natural gas we produce. Finally, it should be noted that some scientists have concluded that increasing concentrations of greenhouse gases in the Earth's atmosphere may produce climate changes that have significant physical effects, such as increased frequency and severity of storms, droughts, and floods and other climatic events; if any such effects were to occur, they could have an adverse effect on our assets and operations.

Competition in the natural gas and oil industry is intense. We are smaller and have less operating history than many of our competitors, and increased competitive pressure could adversely affect our results of operations.

We operate in a highly competitive environment. We compete with other natural gas and oil companies in all areas of our operations, including the acquisition of exploratory prospects and proven properties. Our competitors include major integrated natural gas and oil companies, numerous independent natural gas and oil companies, individuals and drilling and income programs. Many of our competitors are large, well-established companies that have substantially larger operating staffs and greater capital resources than we do and, in many instances, have been engaged in the natural gas and oil business for a much longer time than we have. These companies may be able to pay more for exploratory prospects and productive natural gas and oil properties and may be able to define, evaluate, bid for and purchase more properties and prospects than our financial and human resources permit. In addition, these companies may be able to spend more on the existing and changing technologies that we believe are and will be increasingly important to the current and future success of natural gas and oil companies. Our ability to explore for natural gas and oil prospects and to acquire additional properties in the future will depend on our ability to conduct our operations, to evaluate and select suitable properties and to consummate transactions in this highly competitive environment. Increased competitive pressure could have a material adverse effect on our financial condition, future cash flows and the results of operations.

Acquisition prospects are difficult to assess and may pose additional risks to our operations.

Where appropriate, we may evaluate and pursue acquisition opportunities on terms our management considers favorable. The successful acquisition of natural gas and oil properties requires an assessment of:

Recoverable reserves;

Exploration potential;

Future natural gas and oil prices;

Operating costs;

Potential environmental and other liabilities; and

Permitting and other environmental authorizations required for our operations.

In connection with such an assessment, we would expect to perform a review of the subject properties that we believe to be generally consistent with industry practices. Nonetheless, the resulting conclusions are inexact and their accuracy inherently uncertain, and such an assessment may not reveal all existing or potential problems, nor will it necessarily permit a buyer to become sufficiently familiar with the properties to fully assess their merits and deficiencies. Inspections may not always be performed on every facility or well, and structural and environmental problems are not necessarily observable even when an inspection is undertaken. Future acquisitions could pose additional risks to our operations and financial results, including:

Problems integrating the purchased operations, personnel or technologies;

Unanticipated costs;

Diversion of resources and management attention from our exploration business;

Entry into regions or markets in which we have limited or no prior experience; and

Potential loss of key employees, particularly those of the acquired organization.

We cannot control the activities on properties we do not operate, which may affect the timing and success of our future operations.

Table of Contents

Index to Financial Statements

Other companies operate some of the properties in which we have an interest. As a result, we have a limited ability to exercise influence over operations for these properties or their associated costs. Our dependence on the operator and other working interest owners for these projects and our limited ability to influence operations and associated costs could have a material adverse effect on the realization of our targeted returns on capital in drilling or acquisition activities. The success and timing of our drilling and development activities on properties operated by others therefore depend upon a number of factors that are outside of our control, including:

- Timing and amount of capital expenditures;
- The operator's expertise and financial resources;
- Approval of other participants in drilling wells; and
- Selection of technology.

Technological changes could affect our operations.

The natural gas and oil industry is characterized by rapid and significant technological advancements and introductions of new products and services utilizing new technologies. As others use or develop new technologies, we may be placed at a competitive disadvantage, and competitive pressures may force us to implement such new technologies at substantial costs. In addition, many other natural gas and oil companies have greater financial, technical and personnel resources that may allow them to enjoy technological advantages and may in the future allow them to implement new technologies before we can. We may be unable to respond to such competitive pressures and implement such technologies on a timely basis or at an acceptable cost. If one or more of the technologies that we currently use or may implement in the future were to become obsolete or if we are unable to use the most advanced commercially available technology, it could have a material adverse effect on our financial condition, future cash flows and the results of operations.

The CBM which we produce in the Powder River Basin may be drained by offsetting production wells.

Our drilling locations in the Powder River Basin are spaced primarily using 80-acre spacing. Producing wells located on the 80-acre spacing units contiguous with our drilling locations may drain the acreage underlying our wells. We do not operate these properties and have limited ability to exercise influence over operations for these properties. The success and timing of drilling, development and exploitation activities on properties operated by others depend on a number of factors that are beyond our control. Likewise, as a result of our dependence on the operator and other working interest owners for these projects, we are limited in our ability to drill wells to protect against drainage. Although there has not been a material number of offsetting wells drilled adjacent to our properties at this time, if a substantial number of productive wells are drilled on spacing units adjacent to our properties, they may decrease our revenue and could have an adverse impact on the economically recoverable reserves of our properties that are susceptible to such drainage.

Our Powder River Basin CBM wells typically have a shorter reserve life and lower rates of production than conventional natural gas wells, which may adversely affect our profitability and our ability to recognize proved reserves from this basin during periods of low natural gas prices.

The shallow coal from which we produce CBM in the Powder River Basin typically have a two to six year reserve life and have lower total reserves and produce at lower rates than most conventional natural gas wells. We depend on drilling a large number of wells each year to replace production and reserves in the Powder River Basin and to distribute operational expenses over a larger number of wells. A decline in natural gas prices could make certain wells uneconomical because production rates are lower on an individual well basis and may be insufficient to cover operational costs. The extended decline in gas prices through 2009 combined with the revised pricing methodology under the new SEC rules, described in more detail above, had a negative impact on our reserves in the Powder River Basin. As of December 31, 2011, we did not recognize any proved undeveloped reserves in the Powder River Basin, and we only recognized minimal proved undeveloped reserves as of December 31, 2010. Our proved developed reserves in the Power River Basin had only nominal value at such dates.

We depend on our key personnel, the loss of which could adversely affect our operations and financial performance. We depend, to a large extent, on the services of a limited number of senior management personnel and directors. Particularly, the loss of the services of our chief executive officer and chief financial officer could negatively impact our future operations. We have employment agreements with these key members of our senior management team; although, we do not maintain key-man life insurance on any of our senior management. We believe that our success is also dependent on our ability to continue to retain the services of skilled technical personnel. Our inability to retain skilled technical personnel could have a material adverse effect on our financial condition, future cash flows and the results of operations.

Table of Contents

Index to Financial Statements

Some of our directors may not be subject to suit in the United States.

Two of our directors are citizens of Canada. As a result, it may be difficult or impossible to effect service of process within the United States upon those directors, to bring suit against them in the United States or to enforce in the U.S. courts any judgment obtained there against them predicated upon any civil liability provisions of the U.S. federal securities laws. Investors should not assume that Canadian courts will enforce judgments of U.S. courts obtained in actions against those directors predicated upon the civil liability provisions of the U.S. federal securities laws or the securities or “blue sky” laws of any state within the United States or will enforce, in original actions, liabilities against those directors upon the U.S. federal securities laws or any such state securities or blue sky laws.

Current and future economic conditions in the United States and key international markets may materially adversely impact our operating results.

Our operations are affected by local, national and international economic conditions and the condition of the natural gas and oil industry. The United States and other world economies are slowly recovering from a recession, which began in 2008 and has extended into 2012. Although growth has resumed, it is modest and certain economic data indicates the United States and worldwide economies may require some time to recover. There are likely to be significant long-term effects resulting from the recession and credit market crisis, including a future global economic growth rate that is slower than what was experienced in recent years. In addition, more volatility may occur before a sustainable, yet lower, growth rate is achieved. Global economic growth drives demand for energy from all sources, including fossil fuels. A lower future economic growth rate will result in decreased demand growth for our natural gas production and crude oil, as well as lower commodity prices, which will reduce our cash flows from operations and our profitability.

Continued market deterioration could also jeopardize the performance of certain counterparty obligations, including those of our insurers, customers and financial institutions. Although we assess the creditworthiness of our counterparties, prolonged business decline or disruptions as a result of economic slow-down or lower commodity prices could lead to changes in a counterparty’s liquidity and increase our exposure to credit risk and bad debts. In the event any such party fails to perform, our financial results could be adversely affected and we could incur losses and our liquidity could be negatively impacted.

**Risks Related to Our Common Shares**

Our common share price has been and is likely to continue to be highly volatile.

The trading price of our common shares are subject to wide fluctuations in response to a variety of factors, including quarterly variations in operating results, announcements of drilling and rig activity, economic conditions in the natural gas and oil industry, general economic conditions or other events or factors that are beyond our control.

In addition, the stock market in general and the market for natural gas and oil exploration companies, in particular, have experienced large price and volume fluctuations that have often been unrelated or disproportionate to the operating results or asset values of those companies. These broad market and industry factors may seriously impact the market price and trading volume of our common shares regardless of our actual operating performance. In the past, following periods of volatility in the overall market and in the market price of a company’s securities, securities class action litigation has been instituted against certain natural gas and oil exploration companies. If this type of litigation were instituted against us following a period of volatility in our common shares trading price, it could result in substantial costs and a diversion of our management’s attention and resources, which could have a material adverse effect on our financial condition, future cash flows and the results of operations.

Future issuances of our common shares may adversely affect the price of our common shares.

The future issuance of a substantial number of common shares into the public market, or the perception that such an issuance could occur, could adversely affect the prevailing market price of our common shares. A decline in the price of our common shares could make it more difficult to raise funds through future offerings of our common shares or securities convertible into common shares.

Our ability to issue an unlimited number of our common shares under our articles of incorporation may result in dilution or make it more difficult to effect a change in control of the Company, which could adversely affect the price

of our common shares.

Unlike most corporations formed in the U.S., our Amended and Restated Articles of Incorporation chartered under the laws of the Province of Alberta, Canada permit the board of directors to issue an unlimited number of new common shares without shareholder approval, subject only to the rules of the NYSE Amex LLC or any future exchange on which our common

28

---

Table of Contents

Index to Financial Statements

shares might trade. The issuance of a large number of common shares could be effected by our directors to thwart a takeover attempt or offer for us by a third party, which could result in the common shares being valued less in the market. The issuance or the threat of issuance of a large number of common shares at prices that are dilutive to the outstanding common shares could also result in the common shares being valued less in the market.

We are able to issue shares of preferred stock with greater rights than our common shares.

Our Amended and Restated Articles of Incorporation authorize our board of directors to issue one or more series of preferred shares and set the terms of the preferred shares without seeking any further approval from our shareholders. Any preferred shares that are issued may rank ahead of our common shares in terms of dividends, liquidation rights, or voting rights. If we issue preferred shares, it may adversely affect the market price of our common shares.

Because we have no plans to pay dividends on our common shares, shareholders must look solely to appreciation of our common shares to realize a gain on their investment.

We do not anticipate paying any dividends on our common shares in the foreseeable future. We currently intend to retain any future earnings to finance the expansion of our business. In addition, the Revolving Credit Facility contains covenants that prohibit us from paying cash dividends as long as such debt remains outstanding. The payment of future dividends, if any, will be determined by our board of directors in light of conditions then existing, including our earnings, financial condition, capital requirements, restrictions in financing agreements, business conditions and other factors. Accordingly, shareholders must look solely to appreciation of our common shares to realize a gain on their investment, which may not occur.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

Our properties consist primarily of natural gas and oil leases in the following areas:

• Marcellus Shale in West Virginia and central and southwestern Pennsylvania;

• Hilltop area of East Texas; and

• Powder River Basin in Wyoming and Montana.

Additional information concerning our interests and related natural gas and oil activities in these areas is described under “Item 1 – Business” of this Form 10-K.

Table of ContentsIndex to Financial Statements

## Production, Prices and Operating Expenses

The following table presents information regarding production volumes, average sales prices received and selected data per Mcfe associated with our sales of natural gas, oil and NGLs for the periods indicated. Oil, condensate and NGLs are compared with natural gas in terms of cubic feet of natural gas equivalents. One barrel of oil, condensate or NGLs is the energy equivalent of six Mcf of natural gas.

	For the Years Ended		
	December 31,		
	2011	2010	2009
Production:			
Natural gas (MMcf)	7,318	7,593	9,266
Oil (MBbl)	40	10	4
NGLs (MBbl)	21	—	—
Total production (MMcfe)	7,684	7,654	9,291
Natural gas (MMcf/d)	20.0	20.8	25.4
Oil (MBbl/d)	0.1	—	—
NGLs (MBbl/d)	0.1	—	—
Total daily production (MMcfe/d)	21.1	21.0	25.5
Average sales price before hedging activity:			
Natural gas (per Mcf)	\$3.21	\$3.51	\$3.06
Oil (per Bbl)	\$85.11	\$72.63	\$54.46
NGLs (per Bbl)	\$52.47	\$—	\$—
Average sales price after realized hedging activity:			
Natural gas (per Mcf)	\$4.56	\$4.06	\$4.36
Selected operating expenses (in thousands):			
Production taxes	\$620	\$370	\$439
Lease operating expenses	8,630	6,679	6,572
Transportation, treating and gathering	4,501	4,654	1,547
Depreciation, depletion and amortization	15,216	9,306	16,484
General and administrative expense	11,365	14,638	15,649
Selected operating expenses per Mcfe:			
Production taxes	\$0.08	\$0.05	\$0.05
Lease operating expenses	\$1.12	\$0.87	\$0.71
Transportation, treating and gathering	\$0.59	\$0.61	\$0.17
Depreciation, depletion and amortization	\$1.98	\$1.22	\$1.77
General and administrative expense	\$1.48	\$1.91	\$1.68
Production costs (1)	\$1.62	\$1.39	\$0.76

(1) Production costs include lease operating expense, insurance, gathering and workover expense and excludes ad valorem and severance taxes.

## Drilling Activity

The following table shows our drilling activity for the periods indicated. In the table, “gross” refers to wells in which we have a working interest, and “net” refers to gross wells multiplied by our working interest in such wells.

Table of ContentsIndex to Financial Statements

	For the Years Ended December 31,					
	2011		2010		2009	
	Gross	Net	Gross	Net	Gross	Net
Exploratory wells:						
Productive	20.0	11.9	2.0	2.0	9.0	8.6
Non-productive	—	—	—	—	—	—
Total	20.0	11.9	2.0	2.0	9.0	8.6
Development wells:						
Productive	5.0	1.7	3.0	2.2	2.0	1.2
Non-productive	—	—	—	—	—	—
Total	5.0	1.7	3.0	2.2	2.0	1.2

On December 31, 2011, we had a total of 10 gross (4.5 net) operated wells and six gross (1.2 net) non-operated wells in the process of being drilled or awaiting fracture stimulation in the Marcellus Shale, one gross (0.4 net) non-operated well being drilled in the Hilltop area of East Texas and eight gross (2.8 net) non-operated wells being drilled in Wyoming.

Exploration and Development Acreage

The following table sets forth our ownership interest in undeveloped and developed acreage in the areas indicated where we own a working interest as of December 31, 2011. The term "gross" represents the total number of acres in which we own a working interest. The term "net" represents our proportionate working interest resulting from our ownership in gross acres.

	Undeveloped Acreage		Developed Acreage	
	Gross	Net	Gross	Net
Marcellus Shale area, West Virginia and Pennsylvania (1)				
Marcellus West	39,281	18,047	4,138	1,901
Marcellus East	59,461	53,021	3,498	3,155
Total Marcellus Shale area	98,742	71,068	7,636	5,056
Hilltop area, East Texas	30,843	15,283	10,305	6,585
Powder River Basin, Wyoming and Montana	17,348	7,719	18,615	7,737
Total	146,933	94,070	36,556	19,378

(1) We believe that substantially all of our Marcellus Shale acreage is prospective. The Marcellus West acreage reflects that Atinum has earned their full joint venture interest.

Undeveloped Acreage Expirations

The table below summarizes by year our undeveloped acreage scheduled to expire.

As of December 31,	Gross Acres	Net Acres	% of Total Undeveloped		
			Gross Acres	Net Acres	
2012	20,472	10,245	14	% 11	%
2013	39,444	22,421	27	% 24	%
2014	15,559	12,567	11	% 13	%
2015	17,078	11,959	12	% 13	%
2016 and thereafter	21,577	17,361	15	% 18	%

We have lease acreage that is generally subject to lease expiration if initial wells are not drilled within a specified period, generally not exceeding three to five years. As is customary in the natural gas and oil industry, we can retain our interest in undeveloped acreage by commencing drilling activity that establishes commercial production sufficient to maintain the leases or by payment of delay rentals during the primary term of such leases. Of the 10,245 net acres

expiring in 2012, we are currently focusing on the expiring acreage in East Texas and Marcellus West, where approximately 7,031 acres and 1,478 acres, respectively, are scheduled to expire in 2012. We have already extended or are in the process of extending approximately 2,500

Table of ContentsIndex to Financial Statements

acres in East Texas. In Marcellus West, we anticipate drilling on the majority of the acreage before it expires. Our current plans in Marcellus East are to let approximately 1,623 acres scheduled for expiration in 2012 to expire. In the Powder River Basin area, 113 net acres are expiring in 2012. During 2010, we drilled 16 wells in shallower Devonian formations in the Appalachia area. These wells allow us to retain, for the life of production of our interest, certain undeveloped acreage above the Marcellus Shale for possible deeper drilling in the future. We do not expect to lose significant lease acreage in the Marcellus Shale as a result of our failure to drill or our reduction in drilling activities due to declines in natural gas prices. Based on our evaluation of current prospective economics, in 2012 we may try to renew expiring leases and, if not successful, the acreage will expire in East Texas. We may also allow additional acreage to expire in the future.

**Productive Wells**

The following table sets forth our working interest ownership in productive wells in the areas indicated as of December 31, 2011. The term "gross" represents the total number of wells in which we own a working interest. The term "net" represents our proportionate working interest resulting from our ownership in gross wells. Productive wells are wells that are currently capable of producing natural gas or oil. Wells that are completed in more than one producing horizon are counted as one well.

	Productive Wells				Total Wells	
	Natural Gas		Oil		Gross	Net
	Gross	Net	Gross	Net		
Appalachia, West Virginia and Pennsylvania	51.0	31.3	—	—	51.0	31.3
Hilltop area, East Texas	27.0	18.7	5.0	5.0	32.0	23.7
Powder River Basin, Wyoming and Montana	471.0	207.8	—	—	471.0	207.8
Total	549.0	257.8	5.0	5.0	554.0	262.8

**Natural Gas and Oil Reserves****Reserve Estimation**

The SEC rules expand the definition of natural gas and oil producing activities to include the extraction of saleable hydrocarbons from oil sands, shale, coal beds or other nonrenewable natural resources that are intended to be upgraded into synthetic natural gas or oil and activities undertaken with a view to such extraction. The use of new technologies is now permitted in the determination of proved reserves if those technologies have been demonstrated empirically to lead to reliable conclusions about reserve volumes. Proved reserves must be estimated using the unweighted average of first-day-of-the-month commodity prices over the preceding 12-month period, rather than the end-of-period price, when estimating whether reserve quantities are economical to produce. Likewise, the unweighted 12-month average price is used to compute depreciation, depletion and amortization. Subject to limited exceptions, proved undeveloped reserves may only be booked if they relate to wells scheduled to be drilled within five years of the date of booking.

**Third Party Review of Reserves Estimates**

For the years ended December 31, 2011 and 2010, reserves estimates for the Hilltop Area of East Texas and the Powder River Basin of Wyoming and Montana shown herein have been independently evaluated by Netherland, Sewell & Associates, Inc. ("NSAI"), a worldwide leader of petroleum property analysis for industry and financial organizations and government agencies. Additionally, NSAI evaluated the reserves estimates for the Marcellus Shale for the year ended December 31, 2010. NSAI was founded in 1961 and performs consulting petroleum engineering services. A copy of NSAI's summary reserve report is included as Exhibit 99.1 to this Form 10-K. For the year ended December 31, 2011, reserves estimates for the Marcellus Shale shown herein have been independently evaluated by Wright & Company, Inc. ("Wright"), a national firm providing petroleum property analysis for industry and financial organizations with extensive experience in the Marcellus Shale. Wright was founded in 1988 and performs consulting petroleum engineering services. A copy of Wright's summary reserve report is included as Exhibit 99.2 to this Form 10-K.

Within NSAI, the technical persons primarily responsible for preparing the reserves estimates set forth in the NSAI reserve report incorporated herein are Mr. Dan Paul Smith and Mr. William (Bill) J. Knights. Mr. Smith has been practicing consulting petroleum engineering at NSAI since 1980. He is a Registered Professional Engineer in the State of Texas and has over 30 years of practical experience in petroleum engineering and in the estimation and evaluation of reserves. He graduated from Mississippi State University in 1973 with a Bachelor of Science Degree in Petroleum Engineering. Mr. Knights has been practicing consulting petroleum geology at NSAI since 1991. He is a Certified Petroleum Geologist and Geophysicist in the State of Texas and has over 30 years of practical experience in petroleum geosciences, with over 20 years experience in the

Table of Contents

Index to Financial Statements

estimation and evaluation of reserves. He graduated from Texas Christian University in 1981 with a Bachelor of Science Degree in Geology and in 1984 with a Master of Science Degree in Geology. Both technical principals meet or exceed the requirements regarding qualifications, independence, objectivity and confidentiality set forth in the Standards Pertaining to the Estimating and Auditing of Oil and Gas Reserves Information promulgated by the Society of Petroleum Engineers; both are proficient in judiciously applying industry standard practices to engineering and geoscience evaluations as well as applying SEC and other industry reserves definitions and guidelines.

Within Wright, the technical person primarily responsible for preparing the reserves estimates set forth in the Wright reserve report incorporated herein is Mr. D. Randall Wright. Mr. Wright has been practicing consulting petroleum engineering at Wright since 1988, the year in which he founded the company. He is a Registered Professional Engineer in the State of Texas and has over 38 years of practical experience in petroleum engineering and in the estimation and evaluation of reserves. He has a Master of Science degree in Mechanical Engineering from Tennessee Technological University. The technical principal meets or exceeds the requirements regarding qualifications, independence, objectivity and confidentiality set forth in the Standards Pertaining to the Estimating and Auditing of Oil and Gas Reserves Information promulgated by the Society of Petroleum Engineers; he is proficient in judiciously applying industry standard practices to engineering and geoscience evaluations as well as applying SEC and other industry reserves definitions and guidelines.

**Qualifications of Technical Persons and Internal Controls Over Reserves Estimates**

The preparation of our reserve estimates are completed in accordance with our prescribed internal control procedures and are subject to management review. We maintain an internal technical team consisting of our Senior Reservoir Engineer and several geoscience professionals, who work closely with NSAI and Wright to ensure the integrity, accuracy and timeliness of data furnished to NSAI and Wright in their reserve review and estimation process.

Throughout the year, our internal technical team meets regularly with representatives of NSAI and Wright to review properties and discuss methods and assumptions used in NSAI and Wright's preparation of the year-end reserves estimates. We provide historical information to NSAI and Wright for our largest producing properties, including with respect to ownership interest, oil and gas production, well test data, commodity prices and operating and development costs. NSAI and Wright perform independent analysis, and differences are reviewed with our senior management. In some cases, additional meetings are held to review additional reserve work performed by our technical team related to any identified reserve differences. Historical variances between our internal reserves estimates and NSAI and Wright's estimates have been less than 5%. In addition, our Board of Directors has a reserves review committee, which is chaired by an independent director. The reserves review committee meets at least once a year and is specifically designated to review the year-end reserves reporting and the reserves estimation process, while our senior management reviews and approves any internally estimated significant changes to our proved reserves on a quarterly basis. The year-end NSAI and Wright reserve reports are reviewed by the reserves review committee, together with representatives of NSAI, Wright and our internal team.

Since 2006, all of our reserve estimates have been reviewed and approved by our Senior Reservoir Engineer, who reports directly to our Chief Financial Officer. Our Senior Reservoir Engineer attended Texas A&M University and graduated in 1978 with a Bachelor of Science degree in Reservoir Engineering and has been involved in evaluations and the estimation of reserves and resources for over 29 years. During the year, our technical team may also perform separate, detailed technical reviews of reserve estimates for significant acquisitions or for properties with problematic indicators such as excessively long lives, sudden changes in performance or changes in economic or operational conditions.

**Technologies Used in Reserves Estimation**

Proved reserves are those quantities of oil and natural gas, which, by analysis of geoscience and engineering data, can be estimated with reasonable certainty to be economically producible from a given date forward, from known reservoirs, and under existing economic conditions, operating methods and government regulations. The term "reasonable certainty" implies a high degree of confidence that the quantities of oil and/or natural gas actually recovered will equal or exceed the estimate. The SEC allows the use of techniques that have been proven effective by actual

production from projects in the same reservoir or an analogous reservoir or by other evidence using reliable technology that establishes reasonable certainty. Reliable technology is a grouping of one or more technologies (including computational methods) that have been field tested and have been demonstrated to provide reasonably certain results with consistency and repeatability in the formation being evaluated or in an analogous formation. To achieve reasonable certainty, our technical team employs technologies that have been demonstrated to yield results with consistency and repeatability. The technologies and economic data used in the estimation of our proved reserves include, but are not limited to, empirical evidence through drilling results and well performance, well logs, geologic maps and available downhole and production data, seismic data, well test data and reservoir simulation modeling.

Table of ContentsIndex to Financial Statements

## Estimated Proved Reserves

Our proved reserves information as of December 31, 2011 included in this Form 10-K was estimated by NSAI and Wright using standard engineering and geosciences procedures and methods used in the petroleum industry. The technical personnel responsible for preparing the reserve estimates at NSAI and Wright meet the requirements regarding qualifications, independence, objectivity and confidentiality set forth in the Standards Pertaining to the Estimating and Auditing of Oil and Gas Reserves Information promulgated by the Society of Petroleum Engineers. In accordance with SEC regulations, estimates of our proved reserves and future net revenues as of December 31, 2011 were made using benchmark prices that are the 12-month unweighted arithmetic average of the first-day-of-the-month price for natural gas and oil ("SEC pricing"). Key natural gas prices utilized were the Henry Hub price of \$4.12 per MMBtu, the Katy Hub price of \$4.07 per MMBtu and the CIG price of \$3.93 per MMBtu. NSAI utilized a West Texas Intermediate ("WTI") posted oil price of \$92.71 per barrel, and Wright utilized a WTI spot oil price of \$96.19 per barrel. These prices are held constant in accordance with SEC guidelines for the life of the wells included in the reserve reports but are adjusted by lease in accordance with sales contracts and for energy content, quality, transportation, compression and gathering fees and regional price differentials. Estimated quantities of proved reserves and future net revenues are affected by natural gas and oil prices, which have fluctuated significantly in recent years. All of our proved reserves are located onshore within the United States.

The following table summarizes our estimated proved reserves as of December 31, 2011:

	Total Proved Reserves			
	Producing	Non-producing	Undeveloped	Total
Natural gas (MMcf)	49,397	15,664	26,591	91,652
NGLs (MBbls)	1,075	264	1,418	2,757
Oil (MBbls)	729	175	1,017	1,921
Total proved reserves (MMcfe)	60,219	18,300	41,197	119,716
PV-10 (in thousands) (1)	\$118,270	\$31,576	\$67,271	\$217,117

(1) PV-10 represents the present value, discounted at 10% per annum, of estimated future net revenue before income tax of our estimated proved reserves. PV-10 is a non-U.S. GAAP financial measure because it excludes the effects of income taxes. We believe that PV-10 is a useful measure for evaluating the relative monetary significance of our oil and natural gas properties. Further, investors may use the measure as a basis for comparison of the relative size and value of our reserves to other companies. PV-10 should not be considered as an alternative to standardized measure of discounted future net cash flows as defined under U.S. GAAP. We presently have approximately \$134.3 million of net operating loss carryforwards, \$50.6 million of foreign tax credit carryforwards and \$193.6 million of remaining property tax basis for Federal income tax purposes. Based on these carryforwards and current and future property tax basis, future income taxes discounted at 10% total \$4.3 million, resulting in a standardized measure of discounted future net cash flows as of December 31, 2011 of \$212.8 million.

## Pricing Assumptions

In accordance with the SEC pricing guidelines, our December 31, 2011 report of estimated proved reserves and future net revenues were made using the 12-month unweighted arithmetic average of the first-day-of-the-month prices. These prices are held constant in accordance with SEC guidelines for the life of the wells included in the reserve report but are adjusted by lease in accordance with sales contracts and for energy content, quality, transportation, compression and gathering fees and regional price differentials.

Table of ContentsIndex to Financial Statements

The following table summarizes our proved reserves by geographic area as of December 31, 2011:  
SEC Pricing Case Proved Reserves (1)

	Natural Gas (MMcf)	NGLs (MBbls)	Oil (MBbls)	MMcfe	% Proved Developed	PV-10 (2) (in thousands)
Hilltop area, East Texas	34,212	—	7	34,252	100	% \$ 42,486
Appalachia, West Virginia and Pennsylvania	56,010	2,757	1,914	84,034	51	% 174,340
Powder River Basin, Wyoming and Montana	1,395	—	—	1,395	100	% 216
Other	35	—	—	35	100	% 75
Total	91,652	2,757	1,921	119,716	66	% \$ 217,117

Key natural gas prices utilized were the Henry Hub price of \$4.12 per MMBtu, the Katy Hub price of \$4.07 per (1) MMBtu and the CIG price of \$3.93 per MMBtu. NSAI utilized a WTI posting oil price of \$92.71 per barrel and Wright utilized a WTI spot oil price of \$96.19 per barrel.

PV-10 represents the present value, discounted at 10% per annum, of estimated future net revenue before income tax of our estimated proved reserves. PV-10 is a non-U.S. GAAP financial measure because it excludes the effects of income taxes. We believe that PV-10 is a useful measure for evaluating the relative monetary significance of our oil and natural gas properties. Further, investors may use the measure as a basis for comparison of the relative size and value of our reserves to other companies. PV-10 should not be considered as an alternative to standardized (2) measure of discounted future net cash flows as defined under U.S. GAAP. We presently have approximately \$134.3 million of net operating loss carryforwards, \$50.6 million of foreign tax credit carryforwards and \$193.6 million of remaining property tax basis for Federal income tax purposes. Based on these carryforwards and current and future property tax basis, future income taxes discounted at 10% total \$4.3 million, resulting in a standardized measure of discounted future net cash flows as of December 31, 2011 of \$212.8 million.

## Proved Undeveloped Reserves (“PUDs”)

As of December 31, 2011, our PUDs totaled 41.2 Bcfe, representing a 390% increase from our PUDs as of December 31, 2010. All of our PUDs at year-end 2011 were associated with the Marcellus Shale. The December 31, 2011 PUDs consisted of 19 gross (7.5 net) Marcellus horizontal wells in Appalachia. The increase in PUD well locations in 2011 is due to the successful Marcellus Shale drilling program in 2011. During 2011, we did not convert any PUD reserves to proved developed reserves. The following table summarizes our PUD activity during the year ended December 31, 2011:

	Natural Gas (MMcf)	NGLs (MBbls)	Oil (MBbls)	MMcfe
PUDs as of December 31, 2010	8,320	—	17	8,420
Extensions and discoveries, less related costs	26,157	1,418	1,000	40,663
Revisions of previous estimates (1)	(7,885)	—	—	(7,885)
PUDs as of December 31, 2011	26,592	1,418	1,017	41,198

The downward revision of previous estimates of natural gas is attributable to the decision to forgo the recording of (1) an East Texas PUD location due to low natural gas prices which would have resulted in drilling beyond the five year maximum period from the date initially recorded as a PUD.

Estimated future development costs relating to the development of 2011 year-end PUDs is \$43.9 million of which 2012 and 2013 expenditures are \$40.8 million and \$2.5 million, respectively. Under current SEC requirements, PUD reserves may only be booked if they related to wells scheduled to be drilled within five years of the original date of booking unless specific circumstances justify a longer time. All of our PUDs at December 31, 2011 are scheduled to be drilled by 2013, which is within five years from the date initially recorded as PUD reserves. We may be required to remove our PUDs if we do not drill those reserves within the required five year time frame.

## Item 5. Market for Registrant's Common Equity and Related Shareholder Matters and Issuer Purchases of Equity Securities

## Market Information

Our common stock is traded on the NYSE Amex LLC under the symbol "GST," and until July 6, 2009 on the Toronto Stock Exchange under the symbol "YGA." On July 6, 2009, we voluntarily delisted our common shares on the Toronto Stock Exchange. The following table sets forth the high and low sales prices of our common stock for the 2011 and 2010 annual periods.

	NYSE Amex	
	High	Low
2011:		
Fourth quarter	\$3.96	\$2.63
Third quarter	\$4.86	\$3.00
Second quarter	\$4.85	\$3.20
First quarter	\$4.95	\$4.02
2010:		
Fourth quarter	\$5.44	\$3.46
Third quarter	\$4.27	\$2.85
Second quarter	\$5.77	\$3.40
First quarter	\$5.70	\$4.25

The last reported sale price of our common shares on the NYSE Amex on March 6, 2012 was \$2.77.

## Shareholders

As of March 6, 2012, there were 408 shareholders of record who owned our common shares.

## Dividends

We have never declared or paid any cash dividends on our common stock. We anticipate that we will retain future earnings, if any, to satisfy our operational and other cash needs and do not anticipate paying any cash dividends on our common stock in the foreseeable future. In addition, the Revolving Credit Facility prohibits us from paying cash dividends on our common shares as long as such debt remains outstanding. Pursuant to the provisions of the Business Corporations Act (Alberta), we are prohibited from declaring or paying a dividend if there are reasonable grounds for believing that (1) we are, or would after the payment be, unable to pay our liabilities as they become due or (2) the realizable value of our assets would thereby be less than the aggregate of our liabilities and stated capital of all classes.

## Recent Sales of Unregistered Securities; Use of Proceeds from Unregistered Securities

We did not have any sales of unregistered securities during the year ended December 31, 2011.

## Item 6. Selected Financial Data

Table of ContentsIndex to Financial Statements

The following table presents selected historical financial data as of and for the periods indicated. The selected consolidated financial data are derived from our audited consolidated financial statements. The following selected historical financial data should be read in connection with Item 7. "Management's Discussion and Analysis of Financial Condition and Results of Operations" and the audited Consolidated Financial Statements and related notes included elsewhere in this Form 10-K.

Financial information as of and for the year ended December 31, 2010 includes litigation settlement expense of \$21.7 million. Financial information as of and for the years ended December 31, 2009, 2008, 2007 and 2006 include impairment of natural gas and oil properties of \$68.7 million, \$14.2 million, \$28.5 million and \$56.3 million, respectively. Financial information as of and for the years ended December 31, 2009 and 2007 reflect gains on sale of assets of \$211.2 million and \$38.5 million, respectively. Additionally, financial information as of and for the years ended December 31, 2009 and 2007 include expenses related to the early extinguishment of debt of \$15.9 million and \$15.7 million, respectively.

## Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

## Overview

We are an independent energy company engaged in the exploration, development and production of natural gas and oil in the U.S. Our principal business activities include the identification, acquisition, and subsequent exploration and development of natural gas and oil properties with an emphasis on unconventional reserves, such as shale resource plays. We are currently pursuing the development of liquids-rich natural gas in the Marcellus Shale in the Appalachia area of West Virginia and central and southwestern Pennsylvania. We also hold prospective acreage in the deep Bossier play in the Hilltop area of East Texas and conduct limited CBM development activities within the Powder River Basin of Wyoming and Montana.

Parent is a Canadian corporation, incorporated in Alberta in 1987 and subsisting under the Business Corporations Act (Alberta), with its common shares listed on the NYSE Amex under the symbol "GST." Parent is a holding company. Substantially all of the Company's operations are conducted through, and substantially all of its assets are held by, Parent's primary operating subsidiary, Gastar USA, and its subsidiaries. Gastar USA's Series A Preferred Stock is listed on the NYSE Amex under the symbol "GST.PRA."

Our current operational activities are conducted primarily in the United States. As of December 31, 2011, our major assets consist of approximately 106,400 gross (76,100 net) acres in the Marcellus Shale in West Virginia and

southwestern Pennsylvania, approximately 41,100 gross (21,900 net) acres in the Bossier play in the Hilltop area of East Texas, and approximately 35,900 gross (15,400 net) acres in the Powder River Basin of Wyoming and Montana. During the past three years, we spent approximately \$225.1 million in acreage, seismic, capitalized interest, drilling advances, reserve acquisition and

Table of Contents

Index to Financial Statements

exploratory and development drilling on this acreage. We have not attained positive net income from operations in the past three years. There can be no assurance that operating income and net earnings will be achieved in future periods. As we continue the exploitation and development drilling in the Marcellus Shale, we expect to show further improvement in our operations.

Our financial results depend upon many factors which significantly affect our results of operations including the following:

- The level and success of exploration and development activity;
- The sales prices of natural gas and oil;
- The level of total sales volumes of natural gas and crude oil; and
- The availability of and our ability to raise the capital necessary to meet our cash flow and liquidity needs.

We plan our activities and budget based on then current future period sales price assumptions, given the inherent volatility of natural gas and oil prices that are influenced by many factors beyond our control. We focus our efforts on increasing natural gas and oil reserves and production and strive to control costs at an appropriate level. Our future earnings and cash flows are dependent on our ability to manage our overall cost structure to a level that allows for profitable production. Our future earnings will also be impacted by the changes in the fair market value of hedges we execute to mitigate the volatility in natural gas and oil prices in future periods.

Like other natural gas and oil exploration and production companies, we face natural production declines. As initial reservoir pressures are depleted, natural gas and oil production from a given well will decrease. Thus, a natural gas and oil exploration and production company depletes part of its asset base with each unit of natural gas and oil it produces. We attempt to overcome this natural decline by adding reserves in excess of what we produce through successful drilling or acquisition. Our future growth will depend on our ability to continue to add reserves in excess of our production. We will maintain our focus on adding reserves through drilling and acquisitions, while placing a clear priority on lowering our cost of replacing reserves. Consistent with our stated strategies, we will emphasize maintaining a high-quality inventory of drilling locations, while also focusing on improving our capital and cost efficiency.

2011 Highlights

**Marcellus Shale Drilling Program.** During 2011, we focused our efforts and spent the majority of our capital on our liquids-rich acreage in the Marcellus Shale. As of December 31, 2011, we had drilled and cased 17 gross (7.2 net) operated wells and were in various stages of drilling on five gross (2.5 net) operated wells in Marshall County, West Virginia, under the Atinum Joint Venture. Of the wells drilled and cased, nine gross (four net) wells were on production at December 31, 2011. Additionally, at December 31, 2011, we had commenced drilling operations on a five horizontal well pad and a three horizontal well pad. At December 31, 2011, our proved reserves attributable to our Marcellus Shale acreage were approximately 84.0 Bcfe, a significant increase from year end 2010 reserves of 2.8 Bcfe. Marcellus Shale proved reserves represented approximately 70% of our total proved reserves at December 31, 2011. Oil and NGLs reserves comprised approximately 33% of the total Marcellus Shale proved reserves at year end 2011.

**Public Offering of Gastar USA Series A Preferred Stock.** On June 23, 2011, Gastar USA sold an aggregate of 646,295 shares of Series A Preferred Stock through a best efforts underwritten public offering. In connection with the offering, Parent entered into a guarantee agreement, whereby it will fully and unconditionally guarantee the payment of dividends that have been declared by the board of directors of Gastar USA, amounts payable upon redemption or liquidation, dissolution or winding up, and any other amounts due with respect to the Series A Preferred Stock, to the extent described in the guarantee agreement. The net proceeds to Gastar USA from the offering were approximately \$13.6 million after deducting underwriting discounts, commissions and estimated offering expenses. The net proceeds were primarily used to repay borrowings under the Revolving Credit Facility.

On June 29, 2011, Gastar USA entered into an at-the-market sales agreement ("ATM Agreement") with McNicoll, Lewis & Vlask LLC ("MLV"). According to the provisions of the ATM Agreement, Gastar USA may offer and sell from time to time up to 3,400,000 shares of Series A Preferred Stock through MLV, as its sales agent. Sales of the

units will be made by means of ordinary brokers' transactions on the NYSE at market prices, in block transactions or as otherwise agreed between Gastar USA and MLV. During the period ended December 31, 2011, Gastar USA sold 718,248 shares of Series A Preferred Stock under the ATM Agreement for net proceeds of \$13.9 million. We plan to continue issuing Series A Preferred Stock under the ATM Agreement in the future depending on our capital expenditures program and market conditions.

Table of Contents

Index to Financial Statements

Financial Highlights

Our consolidated financial statements reflect total revenue of \$40.2 million on total volumes of 7.7 Bcfe for the year ended December 31, 2011. Our operating loss for the year ended December 31, 2011 was \$631,000 and included depreciation, depletion and amortization expense of \$15.2 million.

Results of Operations

The following is a comparative discussion of the results of operations for the periods indicated. It should be read in conjunction with the consolidated financial statements and the related notes to the consolidated financial statements, which begin on page F-1.

For additional information about production volumes, prices of natural gas and oil and selected operating expenses, see Item 2. Properties – Production, Prices and Operating Expenses of this Form 10-K.

The following table provides a summary of our revenues, production and operating expenses for the periods indicated:

Table of ContentsIndex to Financial Statements

	Year Ended December 31,		
	2011	2010	2009
	(In thousands, except per unit amounts)		
Revenues:			
Natural gas	\$33,391	\$30,812	\$40,407
Oil	3,416	742	229
NGLs	1,092	—	—
Unrealized natural gas hedge gain (loss)	2,336	11,214	(7,767)

Transportation, treating and gathering	\$0.59	\$0.61	\$0.17
General and administrative expenses	\$1.48	\$1.91	\$1.68
Depreciation, depletion and amortization	\$1.98	\$1.22	\$1.77

## Year Ended December 31, 2011 compared to Year Ended December 31, 2010

Revenues. Natural gas, oil and NGLs revenues were \$37.9 million for the year ended December 31, 2011, up 20% from \$31.6 million for the year ended December 31, 2010. Average daily production on an equivalent basis was 21.1 MMcfe/d for the year ended December 31, 2011 compared to 21.0 MMcfe/d for the same period in 2010. This increase in revenues was the result of a 20% increase in weighted average prices, primarily resulting from increased oil prices and higher oil and NGL volumes for the year ended December 31, 2011. During 2011, our East Texas production averaged 17.3 MMcfe/d compared to 2010 production of 18.6 MMcfe/d, a 7% decrease. Production in Appalachia averaged 2.4 MMcfe/d compared to 2010 production of 0.4 MMcfe/d, a 500% increase. Wyoming and other areas production declined by approximately 28%, primarily due to lower Wyoming production resulting from

reductions in compression to reduce cash costs and limited capital activity.

Liquids revenues (oil and NGLs including condensate) represented approximately 16% of our total revenues before hedge

40

---

Table of ContentsIndex to Financial Statements

gains for the year ended December 31, 2011. Due to lower natural gas prices, we are focusing the majority of our 2012 drilling activity in the liquids-rich portions of the Marcellus Shale. If current trends of natural gas prices relative to oil prices continue and assuming that we successfully and timely complete our 2012 drilling activity, we expect our liquids revenues to increase substantially as a percentage of total revenues before hedging gains or losses in 2012.

During the year ended December 31, 2011, approximately 91% of our total natural gas production was hedged. The realized effect of hedging on natural gas sales was an increase of \$9.9 million in natural gas revenues resulting in an increase in total natural gas price realized from \$3.21 per Mcf to \$4.56 per Mcf for the year ended December 31, 2011. The realized hedge impact includes a benefit of \$1.7 million for amortization of prepaid call sale and put purchase premiums. Excluding the non-cash amortization, the realized effect of hedging was an increase in revenues of \$8.2 million, which was comprised of \$12.1 million of NYMEX hedge gains offset by \$632,000 of regional basis losses and payment of deferred put premiums of \$3.3 million. During the year ended December 31, 2010, the realized effect of hedging on natural gas sales was an increase of \$4.1 million in natural gas and oil revenues resulting in an increase in total price realized from \$3.51 per Mcf to \$4.06 per Mcf. The 2010 realized hedge impact included a loss of \$1.4 million of non-cash amortization of prepaid call sale and put purchase premiums and payment of deferred put premiums of \$1.1 million.

Unrealized natural gas hedge gain was \$2.3 million for the twelve months ended December 31, 2011 compared to \$11.2 million for the twelve months ended December 31, 2010. The decrease in unrealized natural gas hedge impact was the result of a decrease in hedge prices as compared to changes in future NYMEX gas prices.

Production taxes. We reported production taxes of approximately \$620,000 for the year ended December 31, 2011, up from \$370,000 for the year ended December 31, 2010. The increase was primarily the result of higher revenues in West Virginia due to increased natural gas, oil and NGLs production, partially offset by lower revenues in Wyoming due to lower production volumes.

Lease operating expenses. We reported lease operating expenses of \$8.6 million for the year ended December 31, 2011, up from \$6.7 million for the year ended December 31, 2010. This increase was primarily due to higher non-recurring workover expense. Our lease operating expenses were \$1.12 per Mcfe for the year ended December 31, 2011, up 29% from \$0.87 per Mcfe for the same period in 2010. Excluding workover expense and other non-recurring costs, our lease operating expenses were \$6.5 million or \$0.85 per Mcfe for the year ended December 31, 2010, compared to \$5.9 million or \$0.77 per Mcfe for the same period in 2010.

	Lease Operating Expense For the Year Ended December 31, 2011 (in thousands)(\$ per Mcfe)		Lease Operating Expense For the Year Ended December 31, 2010 (in thousands)(\$ per Mcfe)		% Change of \$ per Mcfe	
Hilltop area, East Texas	\$5,863	\$ 0.93	\$4,399	\$ 0.65	43	%
Appalachia	832	\$ 0.97	393	\$ 2.96	(67	)%
Other	1,935	\$ 3.72	1,887	\$ 2.63	41	%
Total	\$8,630	\$ 1.12	\$6,679	\$ 0.87	29	%

The 43% increase from December 31, 2010 to December 31, 2011 in lease operating expense per Mcfe for the Hilltop area, East Texas was primarily the result of higher non-recurring workover costs and lower volumes. Workover costs in the Hilltop area, East Texas for 2011 and 2010 were \$2.1 million and \$760,000, or \$0.33 per Mcfe and \$0.11 per Mcfe, respectively. The 67% decrease from December 31, 2010 to December 31, 2011 in lease operating expense per Mcfe for the Appalachia area was primarily the result of increased production. The 41% increase from December 31, 2010 to December 31, 2011 in lease operating expense per Mcfe in Other was primarily related to Powder River Basin CBM production declines.

Transportation, treating and gathering. We reported transportation expenses of \$4.5 million for the year ended December 31, 2011, down from \$4.7 million for the year ended December 31, 2010. This decrease was primarily due to lower costs in Wyoming due to lower CBM production. The twelve months ended December 31, 2011 includes

\$1.5 million of charges under our Hilltop gas gathering agreement with Hilltop Resort GS, LLC ("Hilltop Resort") compared to \$1.3 million of such charges for the year ended December 31, 2010. Such charges resulted from actual production volumes being less than minimum contractual volume requirements.

Depreciation, depletion and amortization. Depreciation, depletion and amortization ("DD&A") was \$15.2 million for the year ended December 31, 2011, up from \$9.3 million for the year ended December 31, 2010. The increase in DD&A expense was the result of a 62% increase in DD&A rate per Mcfe and a slight increase in production volumes primarily attributable to increased Appalachia production. The DD&A rate for the year ended December 31, 2011 was \$1.98 per Mcfe, as compared to

Table of ContentsIndex to Financial Statements

\$1.22 for the same period in 2010. The increase in the DD&A rate is primarily due to higher proved costs associated with recent East Texas wells drilled and additional allocation of \$63.8 million of undeveloped East Texas leasehold costs from unproved to proved properties based on recent drilling results and reduced 2012 drilling activity due to a decline in natural gas prices.

**General and administrative expenses.** We reported general and administrative expenses of \$11.4 million for the year ended December 31, 2011, down from \$14.6 million for the year ended December 31, 2010. Non-cash stock-based compensation expense, which is included in general and administrative expenses, was \$2.6 million and \$2.8 million for the years ended December 31, 2011 and 2010, respectively. This decrease in stock-based compensation expense was due primarily to the forfeiture of previously issued unvested awards as a result of director and employee resignations, prior year awards being fully amortized and recently issued awards having a lower fair value than awards issued in prior years. Excluding stock-based compensation expense, general and administrative expense decreased \$3.0 million to \$8.8 million for the year ended December 31, 2011 compared to \$11.8 million for the year ended December 31, 2010. This decrease was primarily due to lower legal fees as a result of the Classic Star litigation settlement in November 2010.

**Litigation settlement expense.** We reported litigation settlement expense of \$21.7 million for the twelve months ended December 31, 2010 primarily resulting from our settlement with the plaintiffs of the seven ClassicStar Mare Lease Litigation suits in December 2010 (for additional information regarding the settlement of this matter, see Note 15, "Commitments and Contingencies Litigation," to our consolidated financial statements included in this Form 10-K.

**Interest expense.** We reported interest expense of \$113,000 for the year ended December 31, 2011 compared to \$150,000 for the year ended December 31, 2010. Interest expense excludes \$817,000 and \$633,000 of capitalized interest in 2011 and 2010, respectively, which related to capital expenditures for undeveloped projects in East Texas, West Virginia and Pennsylvania. Excluding capitalized interest, interest expense increased \$147,000 from December 31, 2010 to December 31, 2011 due to higher outstanding debt balances throughout the year ended December 31, 2011 compared to the year ended December 31, 2010.

**Investment income and other.** We reported investment income of \$10,000 for the year ended December 31, 2011 compared to \$1.3 million for the year ended December 31, 2010. The decrease in investment income is primarily due to interest earned during 2010 on the Australian term deposit established in conjunction with the sale of our Australian properties in July 2009 for the future tax payment related to the sale. At maturity on June 1, 2010, the term deposit was used to settle the Australian tax liability resulting from the Australian property sale in 2009 and, thus, resulting in no comparable investment income during 2011.

**Warrant derivative loss.** For the year ended December 31, 2010 we reported a \$205,000 unrealized gain related to the fair value measurement of our warrants outstanding. At December 31, 2011, the warrants had expired and were no longer outstanding.

**Foreign transaction gain (loss).** We reported a foreign transaction loss of \$6,000 for the year ended December 31, 2011 compared to a gain of \$353,000 for the year ended December 31, 2010. The decrease in foreign transaction gain was primarily due to the decrease in Australian denominated cash and accounts receivable balances arising from the sale of the Australian properties in 2009.

**Provision for income tax expense (benefit).** We reported neither an income tax benefit nor provision for the year ended December 31, 2011. We reported \$804,000 of income tax benefit for the year ended December 31, 2010. The income tax benefit for the twelve months ended December 31, 2010 was primarily due to a \$1.0 million downward adjustment of the tax expense related to the sale of the Australian properties after final review from the Australian Tax Office partially offset by withholding tax on the interest income earned from the Australian term deposit and a benefit for previously accrued state income taxes.

**Dividends on Preferred Stock.** We reported dividends on our Series A Preferred Stock of \$1.0 million for the year ended December 31, 2011. The Series A Preferred Stock had a stated value of approximately \$27.5 million at December 31, 2011 and carries a cumulative dividend rate of 8.625% per annum. There were no shares of Series A Preferred Stock outstanding during the year ended December 31, 2010.

Year Ended December 31, 2010 compared to Year Ended December 31, 2009

Revenues. Natural gas and oil revenues were \$31.6 million for the year ended December 31, 2010, down 22% from \$40.6 million for the year ended December 31, 2009. Average daily production on an equivalent basis was 21.0 MMcfe/d for the year ended December 31, 2010 compared to 25.5 MMcfe/d for the same period in 2009. This decrease in revenues was the result of an 18% decrease in production and a 6% decrease in prices. The decrease in production is primarily due to delays in new wells

42

---

Table of ContentsIndex to Financial Statements

coming on production to offset the production decline on existing wells and lower Belin #1 production due to the well not producing for the majority of the second quarter of 2010 compared to the first half of 2009 benefitting from the initial high rates of production from the well. During 2010, our East Texas production averaged 18.6 MMcfe/d compared to 2009 production of 21.8 MMcfe/d, a 15% decrease. Production in Wyoming and other areas declined by approximately 35%, primarily due to lower Wyoming production resulting from reductions in compression to reduce cash costs and only one Wyoming well being drilled in 2010.

During the year ended December 31, 2010, approximately 94% of our total natural gas production was hedged, of which only 45% had price ceiling limitations. The realized effect of hedging on natural gas sales for the year ended December 31, 2010 was an increase of \$4.1 million in revenues resulting in an increase in total natural gas price received from \$3.51 per Mcf to \$4.06 per Mcf. The realized hedge impact includes a reduction of \$1.4 million for non-cash amortization of prepaid put purchase and call sale premiums. Excluding the non-cash amortization, the realized effect of hedging was an increase in revenues of \$5.6 million comprised of \$8.4 million of NYMEX hedge gains offset by \$1.7 million of regional basis losses and deferred put premium payments of \$1.1 million.

Unrealized natural gas hedge gain was \$11.2 million for the twelve months ended December 31, 2010 compared to an unrealized natural gas hedge loss of \$7.8 million for the twelve months ended December 31, 2009. The increase in unrealized natural gas hedge impact was the result of the benefit from lower future NYMEX gas prices offset by lower hedged volumes and losses related to basis differentials.

Production taxes. We reported production taxes of approximately \$370,000 for the year ended December 31, 2010, down from \$439,000 for the year ended December 31, 2009. The decrease was primarily the result of lower revenues in Wyoming due to lower production volumes.

Lease operating expenses. We reported lease operating expenses of \$6.7 million for the year ended December 31, 2010, up slightly from \$6.6 million for the year ended December 31, 2009. This increase was primarily due to higher non-recurring workover expense. Our lease operating expenses were \$0.87 per Mcfe for the year ended December 31, 2010, up 23% from \$0.71 per Mcfe for the same period in 2009. Excluding workover expense and other non-recurring costs, our lease operating expenses were \$5.9 million or \$0.77 per Mcfe for the year ended December 31, 2010, compared to \$6.0 million or \$0.62 per Mcfe for the same period in 2009.

	Lease Operating Expense For the Year Ended December 31, 2010 (in thousands) (\$ per Mcfe)		Lease Operating Expense For the Year Ended December 31, 2009 (in thousands) (\$ per Mcfe)		% Change of \$ per Mcfe	
Hilltop area, East Texas	\$4,399	\$0.65	\$4,023	\$0.50	29	%
Other	\$2,280	\$2.68	2,549	\$1.93	39	%
Total	\$6,679	\$0.87	\$6,572	\$0.71	23	%

The 29% increase from December 31, 2009 to December 31, 2010 in lease operating expense per Mcfe for the Hilltop area, East Texas was primarily the result of lower volumes and higher non-recurring workover costs. Workover costs in the Hilltop area, East Texas for 2010 and 2009 were \$760,000 and \$344,000, or \$0.11 per Mcfe and \$0.04 per Mcfe, respectively. The 39% increase from December 31, 2009 to December 31, 2010 in lease operating expense per Mcfe in Other was primarily related to Powder River Basin CBM production declines.

Transportation, treating and gathering. We reported transportation expenses of \$4.7 million for the year ended December 31, 2010, up from \$1.5 million for the year ended December 31, 2009. This increase was primarily due to gathering charges in East Texas under the Hilltop Gathering Agreement, effective November 2009 in conjunction with the sale of our Hilltop Gathering System, partially offset by lower transportation costs in Wyoming as a result of lower production. The twelve months ended December 31, 2010 included \$1.3 million of charges under the Hilltop Gathering Agreement due to actual production volumes being less than minimum contractual volume requirements.

Depreciation, depletion and amortization. DD&A was \$9.3 million for the year ended December 31, 2010, down from \$16.5 million for the year ended December 31, 2009. The decrease in DD&A expense was the result of a 31%

decrease in DD&A rate per Mcfe and an 18% decrease in production volumes primarily attributable to delays in drilling and operational issues on the Belin #1. The DD&A rate for the year ended December 31, 2010 was \$1.22 per Mcfe, as compared to \$1.77 for the same period in 2009. The decrease in the DD&A rate is primarily due to lower proved costs due to ceiling impairments recorded during 2009 and gathering sales proceeds credited to proved property costs in late 2009.

43

---

Table of ContentsIndex to Financial Statements

Impairment of natural gas and oil properties. We did not record an impairment of natural gas and oil properties for the year ended December 31, 2010. We recorded an impairment of natural gas and oil properties of \$68.7 million for the year ended December 31, 2009. The 2009 impairment was the result of a significant decline in natural gas prices at March 31, 2009. Henry Hub natural gas prices at March 31, 2009 declined 37% from December 31, 2008 prices resulting in estimated future net revenues being based on a weighted average price of \$2.64, held constant, discounted at 10% plus unproven properties at historical costs.

General and administrative expenses. We reported general and administrative expenses of \$14.6 million for the year ended December 31, 2010, down from \$15.6 million for the year ended December 31, 2009. Non-cash stock-based compensation expense, which is included in general and administrative expenses, was \$2.8 million and \$3.5 million for the years ended December 31, 2010 and 2009, respectively. This decrease in stock-based compensation expense was due primarily to the decision in March 2009 to pay the 2008 management bonuses of \$801,000 in vested restricted common shares in lieu of cash. Excluding stock-based compensation expense, general and administrative expense decreased \$229,000 to \$11.8 million for the year ended December 31, 2010 compared to \$12.1 million for the year ended December 31, 2009. This decrease was primarily due to a \$1.1 million decrease in bonus expense due to a one-time bonus paid in 2009 in conjunction with the sale of our Australian assets and a \$1.3 million decrease in contract labor expense offset by higher legal costs of \$1.5 million related to litigation matters and the payment of 2008 management bonuses in restricted common shares rather than in cash.

Litigation settlement expense. We reported litigation settlement expense of \$21.7 million for the twelve months ended December 31, 2010 primarily resulting from our settlement with the plaintiffs of the seven ClassicStar Mare Lease Litigation suits in December 2010 (for additional information regarding the settlement of this matter, as well as our other significant currently outstanding legal proceedings, see Note 15, "Commitments and Contingencies Litigation," to our consolidated financial statements included in this Form 10-K).

Interest expense. We reported interest expense of \$150,000 for the year ended December 31, 2010 compared to \$4.0 million for the year ended December 31, 2009. Interest expense excludes \$633,000 and \$10.8 million of capitalized interest in 2010 and 2009, respectively, which related to capital expenditures for undeveloped projects in East Texas, West Virginia and southwestern Pennsylvania. Excluding capitalized interest, interest expense decreased \$14.8 million from December 31, 2009 to December 31, 2010 due to the payoff of substantially all outstanding debt in conjunction with the sale of our Australian assets in July 2009.

Early extinguishment of debt. We did not record early extinguishment of debt expense for the year ended December 31, 2010. In conjunction with the repayment of our previous revolving credit facility, the term loan and the 12<sup>3</sup>/<sub>4</sub>% senior secured notes during 2009, we reported debt extinguishment expense of \$15.9 million for the year ended December 31, 2009, comprised of \$8.9 million of early prepayment penalty on the term loan and the 12<sup>3</sup>/<sub>4</sub>% senior secured notes and \$7.0 million of unamortized deferred financing costs on the debt retired.

Gain on sale of unproved properties. We did not record a gain on sale of assets for the year ended December 31, 2010. In July 2009, we sold our non-producing Australian assets, for approximately \$250.4 million, including gross reserve certification target proceeds and before transaction costs of approximately \$1.5 million, resulting in a pre-tax gain on sale of \$211.2 million for the year ended December 31, 2009.

Warrant derivative loss. For the year ended December 31, 2010, we reported a \$205,000 unrealized gain related to the fair value measurement of our warrants outstanding compared to a \$205,000 unrealized loss at December 31, 2009.

Foreign transaction gain (loss). We reported a foreign transaction gain of \$353,000 for the year ended December 31, 2010 compared to a gain of \$3.8 million for the year ended December 31, 2009. The decrease in foreign transaction gain was primarily due to Australian exchange rate fluctuations and a decrease in our Australian denominated cash and accounts receivable balances arising from the sale of our Australian assets in 2009.

Provision for income tax expense (benefit). We reported \$804,000 of income tax benefit for the year ended December 31, 2010 compared to \$70.3 million of income tax expense related to the gain on the sale of our Australian assets for the year ended December 31, 2009. The income tax benefit for the twelve months ended December 31, 2010 is primarily due to a \$1.0 million downward adjustment of the tax expense related to the sale of our Australian assets

after final review from the Australian Tax Office partially offset by withholding tax on the interest income earned from the Australian term deposit and a benefit for previously accrued state income taxes. At maturity on June 1, 2010, the term deposit was used to settle the tax liability resulting from the 2009 sale of our Australian assets.

Index to Financial Statements

Liquidity and Capital Resources

Overview. Our primary sources of liquidity and capital resources are internally generated cash flows from operating activities or asset sales, availability under the Revolving Credit Facility, issuances of Gastar USA preferred equity and access to capital markets, to the extent available. In addition, during 2011, our Atinum Joint Venture provided a cash source for our Marcellus Shale development program by providing carried interest funding of \$40.0 million of our share of drilling and completion costs on joint venture wells. We continually evaluate our capital needs and compare them to our capital resources and ability to raise funds in the financial markets. We adjust capital expenditures in response to changes in natural gas and oil prices, drilling results and cash flow.

For the year ended December 31, 2011, we reported cash flow provided by operating activities of \$10.2 million, net cash used in investing activities of \$63.8 million, primarily for the development and purchase of natural gas and oil properties and net cash provided by financing activities of \$56.8 million. As a result of these activities, our cash and cash equivalents balance increased by \$3.2 million, resulting in a December 31, 2011 balance of cash and cash equivalents of \$10.6 million. Net cash provided by operating activities increased \$16.3 million from 2010 primarily due to the litigation settlement expense of \$18.6 million in 2010 and increased natural gas, oil and NGLs revenues in 2011 resulting from higher realized natural gas and oil prices including the effects of realized hedging. Cash flow used in investing activities increased \$20.2 million primarily due to increased development and purchase of natural gas and oil properties during 2011. During 2011, our financing activities primarily related to \$30.0 million of net borrowings under the Revolving Credit Facility and proceeds from the issuance of 1,364,543 shares of Gastar USA's Series A Preferred Stock for net proceeds of \$27.4 million.

At December 31, 2011, we had a net working capital deficit of approximately \$17.9 million, including \$19.5 million of advances from non-operators, of which \$1.5 million will be applied to our net future costs pursuant to the carried interest provisions of the Atinum Joint Venture. At December 31, 2011, availability under the Revolving Credit Facility was \$20.0 million. On March 5, 2012, Gastar USA received notification from its lenders that, effective immediately, the borrowing base under the Revolving Credit Facility was increased from \$50.0 million to \$100.0 million resulting in current availability under the Revolving Credit Facility of \$73.0 million.

Future capital and other expenditure requirements. Capital expenditures for 2012, excluding acquisitions, are projected to be approximately \$134.2 million. In the Marcellus Shale, we expect to spend \$103.0 million for drilling, completion, infrastructure, lease acquisition and seismic costs. We have budgeted \$6.6 million for East Texas. In addition, we have allocated \$19.8 million for a new Mid-Continent oil-focused venture and \$4.8 million for capitalized interest and other costs. We plan on funding this capital activity through existing cash balances, internally generated cash flow from operating activities, borrowings under the Revolving Credit Facility and possible future ATM issuances of Gastar USA Series A Preferred Stock. Our capital expenditures and the scope of our drilling activities may change as a result of several factors, including, but not limited to, changes in natural gas and oil prices, costs of drilling and completion and leasehold acquisitions, drilling results, future ATM issuances of Gastar USA Series A Preferred Stock and changes in the borrowing base under the Revolving Credit Facility.

Commodity Hedging Activities. Our operating cash flow is sensitive to many variables, the most significant of which is the volatility of prices for natural gas. Prices for these commodities are determined primarily by prevailing market conditions including national and worldwide economic activity, weather, infrastructure capacity to reach markets, supply levels and other variable factors. These factors are beyond our control and are difficult to predict.

To mitigate some of the potential negative impact on cash flow caused by changes in natural gas prices, we have entered into financial commodity costless collars, index swaps, basis and fixed price swaps and put and call options to hedge natural gas price risk. In addition to NYMEX swaps and collars and fixed price swaps, we have also entered into basis only swaps. With a basis only swap, we have hedged the difference between the NYMEX price and the price received for our natural gas production at the specific delivery location. As of December 31, 2011, the following derivative transactions were outstanding with the associated notational volumes and weighted average underlying hedge prices:

Table of ContentsIndex to Financial Statements

Settlement Period	Derivative Instrument	Average Daily Volume (in MMBtu's)	Total of Notional Volume	Base Fixed Price	Floor (Long)	Short Put	Ceiling (Short)
2012	Put spread	13,028	4,770,420	\$—	\$6.00	\$4.05	\$—
2012	Costless three-way collar	7,410	2,711,580	—	5.73	4.00	6.88

(1)For the period April to December 2012

(2)East Houston-Katy – Houston Ship Channel

(3)Inside FERC Colorado Interstate Gas, Rocky Mountains

At December 31, 2011, the estimated fair value of all of our commodity derivative instruments was a net asset of \$15.9 million, comprised of current and non-current assets and liabilities. In conjunction with certain derivative hedging activity, we deferred the payment of certain put premiums for the production month period July 2010 through December 2012. At December 31, 2011, we had a current commodity derivative premium payable of \$4.7 million. The put premium liabilities are payable monthly as the hedge production month becomes the prompt production month.

By removing the price volatility from a portion of our natural gas for 2011, 2012, 2013 and 2014, we have mitigated, but not eliminated, the potential effects of changing prices on our operating cash flow for those periods. While mitigating negative effects of falling commodity prices, certain derivative contracts also limit the benefits we could receive from increases in commodity prices. For additional information on the impact of changing prices on our financial position, see "Item 7A. Quantitative and Qualitative Disclosure about Market Risk".

As of December 31, 2011, all of our economic derivative hedge positions were with a multinational energy company or large financial institutions, which are not known to us to be in default on their derivative positions. Credit support for our open derivatives at December 31, 2011 is provided under the revolving credit facility through intercreditor agreements or open credit accounts of up to \$5.0 million. We are exposed to credit risk to the extent of non-performance by the counterparties in the derivative contracts discussed above; however, we do not anticipate non-performance by such counterparties.

Subsequent to December 31, 2011, we entered into additional fixed price swaps to mitigate future oil and NGLs price risk on a portion of our projected 2012 and 2013 production. For the period March to December 2012, we have fixed price swaps for 600 Bbls/d of crude oil at \$102.01 per Bbl and 200 Bbls/d of NGLs at \$52.50 per Bbl. For the calendar year 2013, we have fixed price swaps for 400 Bbls/d of crude oil at \$100.75 per Bbl and 200 Bbls/d of NGLs at \$52.50 per Bbl.

Revolving Credit Facility. On October 28, 2009, we executed an amended and restated revolving credit facility, amending and restating in its entirety the original revolving credit facility (the "Revolving Credit Facility"). The Revolving Credit Facility now matures on September 30, 2015. At December 31, 2011, \$30.0 million was outstanding under the Revolving Credit Facility. Effective March 5, 2012, the borrowing base under the Revolving Credit Facility was increased from \$50.0 million to \$100.0 million resulting in current availability of \$73.0 million as of March 6,

2012.

The borrowing base is typically subject to scheduled redeterminations on the first day of May and the first day of November each year prior to scheduled facility maturity. We have requested that our May 2012 redetermination be accelerated to be completed as of March 2012. The next regularly scheduled borrowing base redetermination will be November 2012. However, we and the lenders may request one additional unscheduled redetermination annually. The redetermination in November 2011 resulted in the Fourth Amendment to the Amended and Restated Credit Agreement, effective November 10, 2011, which resulted in, among other things, an extension of the maturity date for the facility from January 2, 2013 to September 30, 2015 and the ability of Gastar USA to hedge up to 100% of the proved developed producing reserves reflected in

46

---

Table of ContentsIndex to Financial Statements

its reserve report using hedging other than floors and protective spreads. Pursuant to the Revolving Credit Facility, the applicable interest rate margin varies from 1.0% to 2.0% in the case of borrowings based on the prime rate and from 2.5% to 3.5% in the case of borrowings based on LIBO rate, depending on the utilization percentage in relation to the borrowing base. Under the Revolving Credit Facility, we are subject to certain financial covenants, including interest coverage ratio, a total net indebtedness to EBITDA ratio and current ratio requirement, and a limitation on our hedge positions.

At December 31, 2011, Gastar USA was not in compliance with the current ratio covenant under the Revolving Credit Facility. Gastar USA was granted a waiver in regards to the current ratio at December 31, 2011 and in conjunction with such waiver, Gastar USA was in compliance with all financial covenants under the Revolving Credit Facility at December 31, 2011. Gastar USA does not anticipate any issues with current ratio compliance in the future. See Note 5, "Long Term Debt – Revolving Credit Facility."

Off-Balance Sheet Arrangements

As of December 31, 2011, we had no off-balance sheet arrangements. We have no plans to enter into any off balance sheet arrangements in the foreseeable future.

Contractual Obligations

The following table summarizes our future contractual obligations as of December 31, 2011:

	Payments Due by Period						
	Total	2012	2013	2014	2015	2016	Thereafter
	(in thousands)						
Long-term debt (1)	\$30,000	\$—	\$—	\$—	\$30,000	\$—	\$—
Interest on long-term debt (2)	3,697	986	986	986	739	—	—
Deferred put premiums (3)	4,725	4,725	—	—	—	—	—
Office space leases (4)	2,270	495	498	509	459	309	—
Gathering system (5)	10,178	3,749	3,513	2,916	—	—	—
Office equipment leases	111	42	36	32	1	—	—
Drilling rigs	4,970	4,970	—	—	—	—	—
Litigation settlement note payable	800	800	—	—	—	—	—
Total contractual obligations	\$56,751	\$15,767	\$5,033	\$4,443	\$31,199	\$309	\$—

(1) See Note 5, "Long-Term Debt", to our consolidated financial statements included in this Form 10-K for a discussion of our revolving credit facility.

(2) Interest payments have been calculated by applying the weighted average interest rate of 3.29% at December 31, 2011 to the outstanding long-term debt of \$30.0 million at December 31, 2011.

(3) In conjunction with certain derivative hedging activity, we deferred the payment of certain put premiums for the production month period January to December 2012. The put premium liabilities become payable monthly as the hedge production month becomes the prompt production month.

(4) Houston office lease obligation expires August 31, 2016, and our West Virginia office lease commenced in December 2010 and expires on December 31, 2014.

(5) Represents the minimum contractual gross daily volume commitment of 50,000 Mcf (35,000 net) per day for the period January 1, 2012 through October 31, 2014 relating to the sale of our Hilltop gathering system.

We maintain a liability for costs associated with the retirement of tangible long-lived assets. At December 31, 2011, our reserve for these obligations totaled \$8.3 million for which no contractual commitment exists. Information about this liability is set forth in Item 8. "Financial Statements and Supplementary Data, Note 2, Summary of Significant Accounting Policies – Asset Retirement Obligation" of this Form 10-K.

We have employment agreements with our Chief Executive Officer and Chief Financial Officer which obligate us to pay a specified level of salary, target bonus and certain other payments and reimbursements to them during their

employment and in the event of termination or change of control. Information about such payments is set forth in Item 11. "Executive Compensation" of this Form 10-K.

Commitments

---

Table of Contents

Index to Financial Statements

In March 2008, we entered into the ETC Contract. The ETC Contract expires September 1, 2017. Pursuant to the ETC Contract, ETC currently provides us with 50 MMcf per day of treating capacity and 150 MMcf per day of transportation capacity from our Hilltop wells, located in Leon and Robertson Counties, Texas.

On November 16, 2009, concurrent with our sale of the Hilltop gathering system in East Texas, one of our wholly-owned subsidiaries entered into a gas gathering agreement, with Hilltop Resort for a term of fifteen years. The agreement covers delivery of our gross production of natural gas from the Hilltop area of East Texas to certain delivery points provided under the ETC Contract as well as additional delivery points that may be added. We are also obligated to connect new wells that we drill within the area covered by the agreement to the gathering system. The agreement provides for a minimum quarterly gathering gross production volume of 50.0 MMcf per day (35.0 MMcf per day net to us) times the number of days in the quarter for five years from the effective date of November 1, 2009. If quarterly production is less than the minimum quarterly requirement, the gathering fee is payable on such deficit. If excess quarterly production exists, such excess is carried forward to offset any future deficit quarters. The gathering fee on the initial gross 25.0 Bcf of production is \$0.325 per Mcf, reducing in steps to \$0.225 per Mcf when cumulative gross production reaches 300.0 Bcf. The current gathering rate is \$0.30 per Mcf. For the years ended December 31, 2011, 2010 and 2009, we paid \$1.5 million, \$1.3 million and \$78,000, respectively, of charges to Hilltop Resort as a result of actual production volumes being less than minimum contractual volume requirements. We do not expect that we will meet our minimum quarterly requirements in the near future.

During December 2010, we, along with Atinum, entered into a gas purchase agreement with SEI with respect to our Marshall County, West Virginia production. The initial term of the gas purchase agreement is five years with the option to extend the term of the gas purchase agreement for an additional five year period. Our Marshall County, West Virginia production is dedicated to SEI for the term of the gas purchase agreement. SEI will purchase all hydrocarbon production, including its 120.0 MMcf per day Fort Beeler processing plant located in Marshall County, West Virginia for transporting and processing. In order to secure access to the Caiman facilities, we, Atinum and SEI dedicated all hydrocarbons purchased and produced in Marshall County, West Virginia for a term of ten years.

**Critical Accounting Policies and Estimates**

The discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements, which have been prepared in accordance with U.S. GAAP. The preparation of these financial statements requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses, related disclosure of contingent assets and liabilities, proved natural gas and oil reserves and the related disclosures in the accompanying consolidated financial statements. Certain accounting policies involve judgments and uncertainties to such an extent that there is reasonable likelihood that materially different amounts could have been reported under different conditions, or if different assumptions had been used. We evaluate our estimates and assumptions on a regular basis. We base our estimates on historical experience and various other assumptions that are believed to be reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates and assumptions used in preparation of our financial statements. Below, we have provided an expanded discussion of our more significant accounting policies, estimates and judgments for our financial statements. We believe these accounting policies reflect the more significant estimates and assumptions used in preparation of the financial statements. Changes in these estimates and assumptions could materially affect our financial position, results of operations or cash flows. Management considers an accounting estimate or policy to be critical if:

- requires assumptions to be made that are uncertain at the time the estimate is made; and
- Changes in the estimate or different estimates that could have been selected could have a material impact on our consolidated results of operations or financial condition.

All other significant accounting policies that we employ are presented in the notes to the consolidated financial statements. The following discussion presents information about the nature of our most critical accounting estimates, our assumptions or approach used and the effects of hypothetical changes in the material assumptions used to develop

each estimate.

**Full Cost Method of Accounting**

We follow the full cost method of accounting for natural gas and oil operations, whereby all costs incurred in the acquisition, exploration and development of natural gas and oil reserves are initially capitalized into cost centers on a country-by-country basis whether or not the activities to which they apply are successful. Currently, our only cost center is the U.S. These costs include land acquisition costs attributable to proved reserves, geological and geophysical expenditures, carrying charges on non-producing properties, costs of drilling and overhead charges directly related to acquisition, exploration and

48

---

Table of Contents

Index to Financial Statements

development activities. Capitalized costs also include salaries, employee benefits, costs of consulting services and other expenses that directly relate to our natural gas and oil activities. Interest costs related to unproved properties are also capitalized. Costs associated with production and general corporate activities are expensed in the period incurred. The capitalized costs of our natural gas and oil properties, plus an estimate of our future development and abandonment costs, are amortized on a unit-of-production method based on our estimate of total proved reserves, as determined by independent petroleum engineers. The percentage of total reserve volumes produced during the year is multiplied by the net capitalized investment plus future estimated development costs in those reserves to determine depletion expense for the period.

Costs of acquiring and evaluating unproved properties are initially excluded from depletion calculations. These unevaluated properties are assessed periodically to ascertain whether an impairment has occurred. When proved reserves are assigned or a property is considered to be impaired, the cost of the property or the amount of the impairment is added to the costs subject to depletion calculations.

Our financial position and results of operations would have been significantly different had we used the successful efforts method of accounting for our oil and gas activities, since we generally reflect a higher level of capitalized costs as well as a higher DD&A rate on our oil and natural gas properties.

Full Cost Ceiling Limitation

The full cost method of accounting for natural gas and oil properties requires a quarterly calculation of a limitation on capitalized costs, often referred to as a full cost ceiling calculation. The ceiling is the present value of estimated future cash flow from proved natural gas and oil reserves reduced by future operating expenses, development expenditures, abandonment costs (net of salvage) to the extent not included in natural gas and oil properties pursuant to authoritative guidance and estimated future income taxes thereon. To the extent that our capitalized costs (net of accumulated depletion and deferred taxes) exceed the ceiling, the excess must be written off to expense. Once incurred, this impairment of natural gas and oil properties is not reversible at a later date even if natural gas and oil prices increase. The ceiling calculation dictates that the 12-month unweighted arithmetic average of the first-day-of-the-month prices and costs in effect are held constant indefinitely. Therefore, the future net revenues associated with the estimated proved reserves are not based on our assessment of future prices or costs, but rather are based on historical average prices and costs in effect at the time of the evaluation. If the net cost exceeds the ceiling, an impairment loss is recognized for the amount by which the net cost exceeds the ceiling and is shown as a reduction in natural gas and oil properties and as additional depletion. Proceeds from a sale of natural gas and oil properties will be applied against capitalized costs, with no gain or loss recognized, unless such a sale would significantly alter the rate of depletion or amortization.

In 2011, the key natural gas prices utilized were the Henry Hub price of \$4.12 per MMBtu, the Katy Hub price of \$4.07 per MMBtu, the CIG price of \$3.93 per MMBtu, the Columbia Gas Appalachia Pool price of \$4.20 per MMBtu and an oil price of \$92.71 per barrel. In applying the full cost method at December 31, 2011 and 2010, we performed a ceiling test on the cost center properties whereby the net cost of natural gas and oil properties, net of related deferred income taxes ("net cost"), was limited to the sum of the estimated future net revenues from our proved reserves using the 12-month unweighted arithmetic average of the first-day-of-the-month prices for natural gas and oil held constant, discounted at 10%, and the lower of cost or fair value of unproved properties, adjusted for related income tax effects and we did not record a ceiling impairment for the years ended December 31, 2011 and 2010. A ceiling impairment of \$68.7 million was required at December 31, 2009 based on the results of the December 31, 2009 ceiling test calculation. The calculation of our proved reserves could significantly impact our ceiling limitation used in determining whether an impairment of our capitalized costs is necessary.

The most likely factor to contribute to a ceiling test impairment is the price used to calculate the reserve limitation threshold. A significant reduction in the prices at a future measurement date could trigger a full cost ceiling impairment. A 10% decrease in prices would have reduced our ceiling impairment cushion by approximately \$29.6 million resulting in an impairment of \$18.1 million. A 10% increase in prices would have increased our ceiling impairment cushion by approximately \$26.5 million.

#### Natural Gas and Oil Reserves

All of the reserves data in this Form 10-K are estimates. Estimates of our natural gas and oil reserves were prepared in accordance with guidelines established by the SEC. Our estimate of proved reserves is based on the quantities of natural gas and oil which geological and engineering data demonstrate, with reasonable certainty, to be recoverable in the future years from known reservoirs under existing economic and operating conditions. Reservoir engineering is a subjective process of estimating underground accumulations of crude oil and natural gas. There are numerous uncertainties inherent in estimating quantities of proved natural gas and oil reserves. Uncertainties include the projection of future production rates and the expected timing of

Table of Contents

Index to Financial Statements

development expenditures. The accuracy of any reserve estimate is a function of the quality of available data, engineering and geological interpretation and judgment. For example, we must estimate the amount and timing of future operating costs, severance taxes, development costs and workover costs, all of which may vary considerably from actual results. In addition, as prices and cost levels change from year-to-year, the economics of producing the reserves may change and therefore, the estimate of proved reserves also may change. Any significant variance in these assumptions could materially affect the estimated quantity and value of our reserves. As a result, reserves estimates may be different from the quantities of natural gas and oil that are ultimately recovered.

In addition, economic producibility of reserves is dependent on the natural gas and oil prices used in the reserves estimate. We based our December 31, 2011 reserves estimates on a 12-month unweighted average of the first-day-of-the month prices, in accordance with SEC rules. However, natural gas and oil prices are volatile and, as a result, our reserves estimates will change in the future. Despite the inherent imprecision in these engineering estimates, our proved reserve volumes and values are used to calculate depletion and impairment provisions.

**Depreciation, Depletion and Amortization**

Units-of-production method is used to amortize our natural gas and oil properties. A change in the quantity of reserves could significantly impact our depletion expense. A reduction in proved reserves, without a corresponding reduction in capitalized costs, will increase our depletion rate. A 10% increase in reserves would have decreased our depletion expense for the year ended December 31, 2011 by approximately \$383,000, while a 10% decrease in reserves would have increased our depletion expense by approximately \$467,000.

**Unproved Property Costs**

Investments in unproved properties are not amortized until proved reserves associated with the properties can be determined or until impairment occurs. Unproved properties are evaluated quarterly for impairment on a field-by-field basis. If the results of an assessment indicate that an unproved property is impaired, the amount of impairment is subtracted from proved natural gas and oil property costs to be amortized.

At December 31, 2011, we had \$78.3 million allocated to unproved property costs, which was comprised primarily of unevaluated acreage costs. The unproven property costs are evaluated by the technical team and management to determine whether the property has potential attributable reserves. Therefore, the assessment made by our technical team and management of the potential reserves will determine whether costs are moved from the unproved category to the full-cost pool for depletion or whether an impairment is taken. A 10% increase or decrease in the unproved property balance would have increased or decreased our impairment cushion by approximately \$7.3 million, respectively, for the year ended December 31, 2011.

**Asset Retirement Obligation**

We have certain obligations to remove tangible equipment and restore land at the end of natural gas and oil production operations. Our removal and restoration obligations are primarily associated with plugging and abandoning wells. Pursuant to the FASB's guidance, we estimate asset retirement costs for all of our assets, inflation-adjust those costs to the forecasted abandonment date, discount that amount using a credit-adjusted-risk-free rate back to the date we acquired the asset or obligation to retire the asset and record an asset retirement obligation ("ARO") liability in that amount with a corresponding addition to our capitalized cost. We then accrete the liability quarterly using the period-end effective credit-adjusted-risk-free rate. As new wells are drilled or purchased, their initial asset retirement cost and liability is calculated and recorded. Should either the estimated life or the estimated abandonment costs of a property change upon our quarterly review, a new calculation is performed using the same methodology of taking the abandonment cost and inflating it forward to its abandonment date and then discounting it back to the present using our credit-adjusted-risk-free rate. The carrying value of the ARO is adjusted to the newly calculated value with a corresponding offsetting adjustment to the asset retirement cost (included in the full-cost pool); therefore, abandonment costs will almost always approximate the estimate. When wells are sold, the related liability and asset costs are removed from the balance sheet.

Estimating the future asset removal costs is difficult and requires management to make estimates and judgments because most of the removal obligations are many years in the future and contracts and regulations often have vague

descriptions of what constitutes removal. Asset removal technologies and costs are constantly changing, as are regulatory, political, environmental, safety and public relations considerations. Inherent in the estimate of the present value calculation of our AROs are numerous assumptions and judgments including the ultimate settlement amounts, inflation factors, credit-adjusted-risk-free-rates, timing of settlement and changes in the legal, regulatory, environmental and political environments.

There are many variables in estimating AROs. We primarily use the remaining estimated useful life from the year-end

Table of Contents

Index to Financial Statements

independent reserves report in estimating when abandonment could be expected for each property based on field or industry practices. We expect to see our calculations impacted significantly if interest rates move from their current levels, as the credit-adjusted-risk-free rate is one of the variables used on a quarterly basis. Our technical team developed a standard cost estimate based on historical costs, industry quotes and depth of wells. Unless we expect a well's plugging cost to be significantly different than a normal abandonment, we use this estimate. The resulting estimate, after application of an inflation factor and a discount factor, could differ from actual results, despite all of our efforts to make an accurate estimate.

**Capitalized Interest**

We capitalize interest on assets not being amortized, such as our drilling in progress expenditures and unproven natural gas and oil properties. The methodology for capitalizing interest on general funds begins with a determination of the borrowings applicable to our qualifying assets. The basis of this approach is the assumption that the portion of the interest costs that are capitalized on expenditures during an asset's acquisition period could have been avoided if the expenditures had not been made. This methodology takes the view that if funds are not required for drilling and unproved property expenditures then they would have been used to pay off other debt. We use our best judgment in determining which borrowings represent the cost of financing the acquisition of the assets. Currently, we only capitalize interest on the Revolving Credit Facility. The interest to be capitalized for any period is derived by multiplying the average rate of interest times the average qualifying assets during the period. To qualify for interest capitalization, we must continue to make progress on the development of the assets. Capitalized interest was approximately \$817,000, \$633,000 and \$10.8 million for 2011, 2010 and 2009, respectively.

**Stock-Based Compensation**

We report compensation expense for stock options and restricted common shares granted to officers, directors and employees using the fair value method and recognition provisions of the modified prospective method. Stock-based compensation costs are recorded over the requisite service period, which approximates the vesting period. The fair value of each stock option grant is estimated on the date of grant using the Black-Scholes-Merton valuation pricing model. The fair value of restricted common shares granted is equal to the closing price on the day prior to the grant. The total fair value of all awards is expensed using the graded-vesting method, which recognizes compensation costs over the requisite service period for each separately vesting tranche of an award as though the award were, in substance, multiple awards.

The Black-Scholes-Merton valuation pricing model requires various highly judgmental assumptions including volatility, expected option life and forfeiture rate. If any of the assumptions used in the Black-Scholes-Merton valuation pricing model change significantly, stock-based compensation expense may differ materially in the future from that recorded in the current period. There were no stock options granted during the year ended December 31, 2011.

**Fair Value Measurement**

We maintain a commodity-price risk-management strategy that uses derivative instruments to minimize significant fluctuations that may arise from volatility in commodity prices. We use natural gas costless collars, index, basis and fixed price swaps and put and call options to hedge commodity price risk. We carry all derivative assets and liabilities at fair value.

We determine the fair market values of financial instruments based on the fair value hierarchy established by the FASB. We utilize third-party broker quotes to access the reasonableness of forward commodity prices, volatility factors, discount rates and the valuation techniques used to measure the fair value of our derivative assets and liabilities, which are all traded in the over-the-counter market. We incorporate counterparty credit risk and our own credit risk within the fair value measurement of derivative assets and liabilities. Credit adjustments, if any, are applied to fair value measurements based on the historical default probabilities of the respective credit ratings assigned to the debt of our counterparties and to us, as published by the independent credit rating agencies.

**Derivative Instruments and Hedging Activity**

We currently utilize derivative instruments, which are placed with a multinational energy company or large financial institutions, to manage market risks resulting from fluctuations in commodity prices of natural gas and oil. Derivatives are recorded on the balance sheet at fair market value and changes in the fair market value of derivatives are recorded each period in current earnings. Gains and losses on derivatives are included in revenue in the period in which they occur. The resulting cash flows from derivatives are reported as cash flows from operating activities.

The counterparties to our derivative instruments are not known to be in default on their derivative positions. However, we are exposed to credit risk to the extent of nonperformance by the counterparty in the derivative contracts. We believe credit risk is minimal and do not anticipate such nonperformance by such counterparties.

Recent Accounting Developments

The following recently issued accounting pronouncements have been adopted or may impact the Company in future periods:

**Comprehensive Income.** In June 2011, the FASB issued an amendment to previously issued guidance regarding the reporting and presentation of other comprehensive income. The amendments require that all non-owner changes in stockholders' equity be presented either in a single continuous statement of comprehensive income or in two separate but consecutive statements. In the two-statement approach, the first statement should present total net income and its components followed consecutively by a second statement that should present total other comprehensive income, the components of other comprehensive income and the total of comprehensive income. Regardless of whether an entity chooses to present comprehensive income in a single continuous statement or in two separate but consecutive statements, the entity is required to present on the face of the financial statements reclassification adjustments for items that are reclassified from other comprehensive income to net income in the statement(s) where the components of net income and the components of other comprehensive income are presented. The amendments do not change the items that must be reported in other comprehensive income or when an item of other comprehensive income must be reclassified to net income. This guidance is effective for fiscal years, and interim periods within those years, beginning after December 15, 2011 and should be applied retrospectively. Earlier application is permitted. The adoption of this guidance will not impact our operating results, financial position or cash flows.

**Fair Value Measurement.** In May 2011, the FASB issued an amendment to previously issued guidance regarding fair value measurement and disclosure requirements. The amendments explain how to measure fair value and do not require additional fair value measurements and are not intended to establish valuation standards or affect valuation practices outside of financial reporting. The amendments result in common fair value measurement and disclosure requirements in U.S. GAAP and International Financial Reporting Standards. This guidance is effective prospectively for interim and annual periods beginning after December 15, 2011. Early application is not permitted.

**Business Combinations.** In December 2010, the FASB's Emerging Issues Task Force ("EITF") issued an amendment to previously issued guidance regarding the pro forma revenue and earnings disclosure requirements for business combinations. The amendments specify that if a public entity presents comparative financial statements, the entity should disclose revenue and earnings of the combined entity as though the business combination(s) that occurred during the current year had occurred as of the beginning of the comparable prior annual reporting period only. The amendments also expand the supplemental pro forma disclosures under current guidance to include a description of the nature and amount of material, nonrecurring pro forma adjustments directly attributable to the business combination included in the reported pro forma revenue and earnings. This guidance is effective prospectively for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2010. Earlier application is permitted. The adoption of this guidance did not impact our operating results, financial position or cash flows.

Item 7A. Quantitative and Qualitative Disclosures about Market Risk

Commodity Price Risk

Our major commodity price risk exposure is to the prices received for our natural gas production. Realized commodity prices received for our production are the spot prices applicable to natural gas in the region produced. Prices received for natural gas are volatile and unpredictable and are beyond our control. For the year ended December 31, 2011, a 10% change in the prices received for natural gas production would have had an approximate \$2.4 million impact on our revenues prior to hedge transactions to mitigate our commodity pricing risk. See Note 9, "Derivative Instruments and Hedging Activity."

Interest Rate Risk

At December 31, 2011, we had \$30.0 million outstanding under the Revolving Credit Facility. Based on the amount outstanding under our Revolving Credit Facility at December 31, 2011, a one percentage point change in the interest rate would have had a \$75,000 impact on our interest expense, all of which would have been capitalized. We currently do not use interest rate derivatives to mitigate our exposure to the volatility in interest rates, including under the

Revolving Credit Facility, as this risk is minimal.

Foreign Currency Exchange Risk

During 2009, we sold all of our Australian assets. As a result, all of our current and future revenues and capital expenditures and substantially all of our expenses are in U.S. dollars, thus limiting our exposure to foreign currency exchange risk.

The reports of our independent registered public accounting firms and our consolidated financial statements, related notes and supplementary information are presented beginning on page F-1.

Item 9. Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

Not applicable.

Item 9A. Controls and Procedures

Evaluation of Disclosure Controls and Procedures

As required by Rule 13a-15(b) under the Exchange Act, we have evaluated, under the supervision and with the participation of our management, including our principal executive officer and principal financial officer, the effectiveness of the design and operation of our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Exchange Act) as of the end of the period covered by this Form 10-K. Our disclosure controls and procedures are designed to provide reasonable assurance that the information required to be disclosed by us in reports that we file under the Exchange Act is accumulated and communicated to our management, including our principal executive officer and principal financial officer, as appropriate, to allow timely decisions regarding required disclosure and is recorded, processed, summarized and reported within the time periods specified in the rules and forms of the SEC. Our principal executive officer and principal financial officer have concluded that our current disclosure controls and procedures were effective as of December 31, 2011 at the reasonable assurance level.

Management's Report on Internal Control over Financial Reporting

Our internal controls over financial reporting are designed to ensure that information required to be disclosed by us in the reports that are filed or submitted under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the SEC's rules and forms. These internal controls over financial reporting include controls and procedures designed to ensure that information required to be disclosed under the Exchange Act is accumulated and communicated to our management on a timely basis to allow decisions regarding required disclosure. Under the supervision and with the participation of our management, including our chief executive officer, chief financial officer and chief accounting officer, we evaluated the effectiveness of the design and operation of our internal controls over financial reporting as of December 31, 2011 based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Our internal control over financial reporting includes policies and procedures that (1) pertain to maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures are being made only in accordance with authorizations of our management and board of directors; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on the financial statements.

Based on the assessment, our management has concluded that our internal control over financial reporting was effective as of December 31, 2011 based on the criteria listed herein. The results of management's assessment were reviewed with the Audit Committee of our Board of Directors.

Our internal control over financial reporting has been audited by BDO USA, LLP, an independent registered public accounting firm, as stated in their report which is included herein.

Report of Independent Registered Public Accounting Firm  
Board of Directors and Shareholders  
Gastar Exploration Ltd.  
Houston, Texas

We have audited Gastar Exploration Ltd.'s (the "Company") internal control over financial reporting as of December 31, 2011, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the "COSO Criteria"). The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Item 9A. "Management's Report on Internal Control over Financial Reporting". Our responsibility is to express an opinion on the effectiveness of internal control over financial reporting of the Company based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Gastar Exploration Ltd. maintained, in all material respects, effective internal control over financial reporting as of December 31, 2011, based on the COSO Criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Gastar Exploration Ltd. and subsidiaries as of December 31, 2011 and 2010 and the related consolidated statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2011 and our report dated March 8, 2012 expressed an unqualified opinion thereon.

PART III

Item 10. Directors and Executive Officers and Corporate Governance

The information regarding directors, executive officers, promoters and control persons required under Item 10 of Form 10-K will be contained in our Definitive Proxy Statement for our 2012 Annual Meeting of Stockholders (the "Proxy Statement") under the headings "Information about Directors, Director Nominees and Executive Officers," "Section 16(b) Beneficial Ownership Reporting Compliance," "Corporate Governance – Code of Ethics," "Corporate Governance – Nomination of Directors," and "Committee Information – Audit Committee" and is incorporated herein by reference. The Proxy Statement will be filed with the Securities and Exchange Commission pursuant to Regulation 14A of the Exchange Act, as amended, not later than 120 days after December 31, 2011.

Item 11. Executive Compensation

The information required under Item 11 of Form 10-K will be contained in the Proxy Statement under the heading "Executive Compensation" and is incorporated herein by reference.

Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

The information required under Item 12 of Form 10-K will be contained in the Proxy Statement under the heading "Security Ownership of Certain Beneficial Owners and Management" and is incorporated herein by reference.

Item 13. Certain Relationships and Related Transactions and Director Independence

The information required under Item 13 of Form 10-K will be contained in the Proxy Statement under the heading "Committee Information" and is incorporated herein by reference.

Item 14. Principal Accountant Fees and Services

The information required under Item 14 of Form 10-K will be contained in the Proxy Statement under the heading "Independent Accountant, Fees and Policies" and is incorporated herein by reference.

PART IV

Item 15. Exhibits, Financial Statements and Schedules

(a)-1 Financial Statements and Schedules:

The financial statements are set forth beginning on Page F-1 of this Form 10-K. Financial statement schedules have been omitted since they are either not required, not applicable, or the information is otherwise included.

(b) Exhibits:

The following is a list of exhibits filed as part of this Form 10-K. Where so indicated, exhibits, which were previously filed, are incorporated herein by reference.

Report of Independent Registered Public Accounting Firm  
Board of Directors and Shareholders  
Gastar Exploration Ltd.  
Houston, Texas

We have audited the accompanying consolidated balance sheets of Gastar Exploration Ltd. (the “Company”) and subsidiaries as of December 31, 2011 and 2010 and the related consolidated statements of operations, shareholders’ equity, and cash flows for each of the three years in the period ended December 31, 2011. These financial statements are the responsibility of the Company’s management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Gastar Exploration Ltd. at December 31, 2011 and 2010, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2011, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 9 to the consolidated financial statements, effective January 1, 2009, the Company changed its method of accounting for certain common stock purchase warrants with the adoption of new guidance on determining whether an instrument is indexed to an entity's own stock. As discussed in Note 2 to the consolidated financial statements, effective December 31, 2009, the Company changed its reserve estimates and related disclosures as a result of adopting new oil and natural gas reserve estimation and disclosure requirements.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Gastar Exploration Ltd.’s internal control over financial reporting as of December 31, 2011, based on criteria established in Internal Control – Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) and our report dated March 8, 2012 expressed an unqualified opinion thereon.

Report of Independent Registered Public Accounting Firm  
Board of Directors and Stockholders  
Gastar Exploration USA, Inc.  
Houston, Texas

We have audited the accompanying consolidated balance sheets of Gastar Exploration USA, Inc. ("Gastar USA") and subsidiaries as of December 31, 2011 and 2010 and the related consolidated statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2011. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Gastar Exploration USA, Inc. at December 31, 2011 and 2010, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2011, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 9 to the consolidated financial statements, effective January 1, 2009, Gastar USA changed its method of accounting for certain common stock purchase warrants with the adoption of new guidance on determining whether an instrument is indexed to an entity's own stock. As discussed in Note 2 to the consolidated financial statements, effective December 31, 2009, the Company changed its reserve estimates and related disclosures as a result of adopting new oil and natural gas reserve estimation and disclosure requirements.

GASTAR EXPLORATION LTD. AND SUBSIDIARIES  
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. Description of Business

Gastar Exploration Ltd. is an independent energy company engaged in the exploration, development and production of natural gas and oil in the United States (“U.S.”). Gastar Exploration Ltd.’s principal business activities include the identification, acquisition, and subsequent exploration and development of natural gas and oil properties with an emphasis on unconventional reserves, such as shale resource plays. Gastar Exploration Ltd. is currently pursuing the development of liquids-rich natural gas in the Marcellus Shale play in the Appalachia area of West Virginia and central and southwestern Pennsylvania. Gastar Exploration Ltd. also holds prospective acreage in the deep Bossier play in East Texas and conducts coal bed methane (“CBM”) development activities within the Powder River Basin of Wyoming and Montana.

Gastar Exploration Ltd. is a holding company and substantially all of its operations are conducted through, and substantially all of its assets are held by, its primary operating subsidiary, Gastar Exploration USA, Inc. and its wholly-owned subsidiaries. Unless otherwise stated or the context requires otherwise, all references in these notes to “Gastar USA” refer collectively to Gastar Exploration USA, Inc. and its wholly-owned subsidiaries, all references to “Parent” refer solely to Gastar Exploration Ltd., and all references to “Gastar,” the “Company” and similar terms refer collectively to Gastar Exploration Ltd. and its wholly-owned subsidiaries, including Gastar Exploration USA, Inc.

2. Summary of Significant Accounting Policies

Basis of Presentation

These financial statements are a combined presentation of the consolidated financial statements of the Company and Gastar USA. Separate information is provided for the Company and Gastar USA as required. Except as otherwise noted, there are no material differences between the consolidated information for the Company presented herein and the consolidated information of Gastar USA.

The consolidated financial statements of the Company and Gastar USA are stated in U.S. dollars unless otherwise noted and have been prepared by management in accordance with accounting principles generally accepted in the United States of America (“U.S. GAAP”). The preparation of these financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses, related disclosure of contingent assets and liabilities, proved natural gas and oil reserves and the related disclosures in the accompanying consolidated financial statements. Actual results could differ from those estimates. Significant estimates with regard to these financial statements include the estimate of proved natural gas and oil reserve quantities and the related present value of estimated future net cash flows. See Note 19, “Supplemental Oil and Gas Disclosures.”

Reclassifications

Certain reclassifications of prior year balances have been made to conform to current year presentation; these reclassifications have no impact on net income (loss).

Subsequent Events

In preparing these financial statements, the Company has evaluated events and transactions for potential recognition or disclosure through the date the financial statements were issued and has disclosed certain subsequent events in these consolidated financial statements, as appropriate.

Principles of Consolidation

The consolidated financial statements of the Company include the accounts of Parent and the consolidated accounts of all its subsidiaries. The wholly-owned subsidiaries included in these consolidated accounts are Gastar USA, Gastar Exploration Texas, Inc. (“Gastar Texas, Inc.”), Gastar Exploration Texas LP (“Gastar Texas”), Gastar Exploration Texas LLC (“Gastar Texas LLC”), Gastar Exploration New South Wales, Inc. (“Gastar New South Wales”), Gastar Exploration Victoria, Inc. (“Gastar Victoria”) and, prior to 2009, Gastar Power Pty Ltd. (“Gastar Power”). All significant intercompany accounts and transactions have been eliminated in consolidation.

The consolidated financial statements of Gastar USA include the accounts of Gastar USA and the consolidated accounts of all its subsidiaries. The wholly-owned subsidiaries included in these consolidated accounts are Gastar Texas, Inc., Gastar Texas, Gastar Texas LLC, Gastar New South Wales, Gastar Victoria, and, prior to 2009, Gastar Power. All significant

Table of ContentsIndex to Financial Statements

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

intercompany accounts and transactions have been eliminated in consolidation.

**Cash and Cash Equivalents**

The Company's cash and cash equivalents, which includes short-term investments such as money market deposits with a maturity of three months or less when purchased, amounted to \$10.6 million and \$7.4 million as of December 31, 2011 and 2010, respectively. The Company maintains its cash in bank deposit accounts, which, at times, may exceed federally insured limits. The Company has not experienced any losses in such accounts and believes it is not exposed to any significant risk of loss.

**Accounts Receivable**

Accounts receivable are reported net of the allowance for doubtful accounts. The allowance for doubtful accounts is determined based on a review of the Company's receivables. Receivable accounts are charged off when collection efforts have failed and the account is deemed uncollectible.

A summary of the activity related to the allowance for doubtful accounts is as follows:

	For the Years Ended December 31,		
	2011	2010	2009
	(in thousands)		
Allowance for doubtful accounts, beginning of year	\$571	\$609	\$560
Expense	—	—	49
Reductions	(20	) (38	) —
Allowance for doubtful accounts, end of year	\$551	\$571	\$609

**Deferred Financing Costs**

Deferred financing costs include costs of debt financings undertaken by the Company, including commissions, legal fees and other direct costs of financing. Using the effective interest method, the deferred financing costs are amortized over the term of the related debt instrument to interest expense.

The following table indicates deferred charges and related accumulated amortization as of the dates indicated:

	As of December 31,		
	2011	2010	
Deferred charges	\$2,249	\$1,974	
Accumulated amortization	(1,714	) (1,466	)
Deferred charges, net	\$535	\$508	

**Natural Gas and Oil Properties**

The Company follows the full cost method of accounting for natural gas and oil operations, whereby all costs incurred in the acquisition, exploration and development of natural gas and oil reserves are initially capitalized into cost centers on a country-by-country basis and are amortized as reserves are produced, subject to a limitation that the capitalized costs not exceed the value of those reserves. With the sale of the Company's Australian Assets (as defined under Note 3, "Property, Plant and Equipment – Sale of Petroleum Exploration Licenses 238, 433 and 434 and Repayment of Debt") in 2009, the U.S. is the Company's only remaining cost center. Capitalized costs include land acquisition costs, geological and geophysical expenditures, carrying charges on non-producing properties, costs of drilling and overhead charges directly related to acquisition, exploration and development activities.

Costs capitalized, together with the costs of production equipment, are depleted and amortized on the unit-of-production

F- 13

---

Table of Contents

Index to Financial Statements

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

method based on the estimated net proved reserves, as determined by independent petroleum engineers. Costs of acquiring and evaluating unproved properties are initially excluded from depletion calculations. These unevaluated properties are assessed quarterly to ascertain whether an impairment has occurred. When proved reserves are assigned or the property is considered to be impaired, the cost of the property is added to costs subject to depletion calculations.

In applying the full cost method of accounting, the Company performs a quarterly ceiling test on the cost center properties whereby the net cost of natural gas and oil properties, net of related deferred income taxes (“net cost”), is limited to the sum of the estimated future net revenues from the Company’s proved reserves using prices that are the 12-month unweighted arithmetic average of the first-day-of-the-month price for natural gas and oil prices held constant, discounted at 10%, and the lower of cost or fair value of unproved properties, adjusted for related income tax effects (“ceiling”). If the net cost exceeds the ceiling, an impairment loss is recognized for the amount by which the net cost exceeds the ceiling and is shown as a reduction in natural gas and oil properties and as additional depletion expense. Proceeds from a sale of natural gas and oil properties will be applied against capitalized costs, with no gain or loss recognized, unless such a sale would significantly alter the rate of depletion or amortization.

The Company’s estimate of proved reserves is based on the quantities of natural gas and oil that engineering and geological analyses demonstrate, with reasonable certainty, to be recoverable from established reservoirs in the future under current operating and economic parameters. Netherland, Sewell & Associates, Inc. (“NSAI”) and Wright & Company, Inc. (“Wright”) prepare a reserve and economic evaluation of all the Company’s properties on a well-by-well basis utilizing information provided by the Company and information available from state agencies that collect information reported to it by the operators of the Company’s properties. As discussed below, the estimate of the Company’s proved reserves as of December 31, 2011 and 2010 have been prepared and presented in accordance with current rules and accounting standards promulgated by the Securities and Exchange Commission (the “SEC”). These rules require SEC reporting companies to prepare their reserve estimates using revised reserve definitions and revised pricing based on a 12-month unweighted arithmetic average of the first-day-of-the-month price. The previous rules required that reserve estimates be calculated using year-end pricing.

Reserves and their relation to estimated future net cash flows impact the Company’s depletion and impairment calculations. As a result, adjustments to depletion and impairment are made concurrently with changes to reserve estimates. The Company prepares its reserve estimates and the projected cash flows derived from these reserve estimates in accordance with SEC guidelines. NSAI and Wright adhere to the same guidelines when preparing the reserve report. The accuracy of the Company’s reserve estimates is a function of many factors, including the quality and quantity of available data, the interpretation of that data, the accuracy of various mandated economic assumptions and the judgments of the individuals preparing the estimates, all of which could deviate significantly from actual results. As such, reserve estimates may materially vary from the ultimate quantities of natural gas, oil and NGLs eventually recovered.

The Company assesses unproved properties for impairment periodically and recognizes a loss where circumstances indicate impairment in value. In determining whether an unproved property is impaired, the Company considers numerous factors including, but not limited to, current drilling plans, favorable or unfavorable activity on the properties being evaluated and/or adjacent properties and current market conditions. In the event that factors indicate an impairment in value, unproved properties leasehold costs are reclassified to proved properties and depleted.

**Capitalized Interest**

The Company capitalizes interest on assets not being amortized related to specific projects such as its drilling in progress and unproven natural gas and oil property expenditures. The methodology for capitalizing interest on general funds begins with a determination of the borrowings applicable to the qualifying assets. The basis of this approach is

the assumption that the portion of the interest costs that are capitalized on expenditures during an asset's acquisition period could have been avoided if the expenditures had not been made. This methodology takes the view that if funds are not required for construction then they would have been used to pay off debt. The primary debt instrument included in the rate calculation of capitalized interest incurred for the year-ended December 31, 2011 was the Revolving Credit Facility (as defined under Note 5, "Long-Term Debt"). Currently, the Company only capitalizes interest on its Revolving Credit Facility. The interest to be capitalized for any period is derived by multiplying the average rate of interest times the average qualifying assets during the period, not to exceed the total interest on the qualifying debt instruments. To qualify for interest capitalization, the Company must continue to make progress on the development of the assets. Capitalized interest costs were approximately \$817,000, \$633,000 and \$10.8 million for 2011, 2010 and 2009, respectively.

Table of Contents

Index to Financial Statements

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

Furniture and Equipment

Furniture and equipment are recorded at historical cost and are depreciated on a straight-line basis over their estimated useful lives, which range from three to seven years.

Fair Value of Financial Instruments

The fair value of financial instruments is determined at discrete points in time based on relevant market information. Such estimates involve uncertainties and cannot be determined with precision. The estimated fair value of cash and cash equivalents, term deposit, accounts receivable, prepaid expenses, accounts and revenue payables and accrued liabilities approximates their carrying value due to their short-term nature. Derivative instruments are also recorded on the balance sheet at fair value.

Derivative Instruments and Hedging Activity

The Company uses derivative instruments in the form of natural gas costless collars, index swaps, basis and fixed price swaps and put and call options to manage price risks resulting from fluctuations in commodity prices of natural gas and oil associated with future natural gas production. Derivative instruments are recorded on the balance sheet at fair value and changes in the fair value of derivatives are recorded each period in current earnings. Fair value is assessed, measured and estimated by obtaining forward commodity pricing, credit adjusted risk-free interest rates and, as necessary, estimated volatility factors. The fair values the Company reports in its consolidated financial statements change as estimates are revised to reflect actual results, changes in market conditions or other factors, many of which are beyond the Company's control. Gains and losses on derivatives are included in revenue in the period in which they occur. The resulting cash flows from derivatives are reported as cash flows from operating activities. See Note 9, "Derivative Instruments and Hedging Activity."

Prior to October 1, 2008, the Company designated and accounted for its derivative instruments as cash flow hedges. Accordingly, changes in the fair values of the Company's cash flow hedges were deferred and recorded in accumulated other comprehensive income, as appropriate, until recognized as natural gas and oil revenues in the Company's consolidated statements of operations as the hedged production was delivered and affected earnings. For all derivative instruments previously designated as cash flow hedges, the Company was required to assess the effectiveness of the hedging relationships at inception and on a quarterly basis.

Effective October 1, 2008, the Company discontinued hedge accounting on all existing derivative contracts and elected not to designate any additional derivative contracts as cash flow hedges. As a result, any subsequent changes in the fair values of discontinued cash flow hedging instruments or new derivative contracts for future production are recognized in unrealized natural gas hedge gain (loss) within the Company's consolidated statements of operations. Any gains or losses previously deferred under cash flow hedge accounting remained in accumulated other comprehensive income until the previously hedged production affected earnings or was no longer probable of occurring. All amounts previously recorded in other comprehensive income in 2008 were recorded in natural gas and oil revenues during 2009 as the hedged production was delivered. For 2011, 2010 and 2009, realized gains or losses from derivative contracts are included in natural gas revenues in the Company's consolidated statement of operations.

Revenue Recognition

The Company uses the sales method of accounting for the sale of its natural gas, oil, condensate and NGLs and records revenues from the sale of such products when delivery to the customer has occurred and title has transferred. This recording of revenues occurs when natural gas, oil, condensate or NGLs have been delivered to a pipeline or a tank lifting has occurred. Under the sales method, revenues are recorded based on the Company's net revenue interest, as delivered. When actual natural gas sales volumes exceed our delivered share of sales volumes, an over-produced imbalance occurs. To the extent an over-produced imbalance exceeds our share of the remaining estimated proved natural gas reserves for a given property, the Company records a liability. The Company had no material gas

imbalances at December 31, 2011 and 2010.

The Company records its share of revenues based on production volumes and contracted sales prices. The sales price for natural gas, oil, condensate and NGLs are adjusted for transportation cost and other related deductions. The transportation costs and other deductions are based on contractual or historical data and do not require significant judgment. Subsequently, these deductions and transportation costs are adjusted to reflect actual charges based on third party documents once received by the Company. In addition, natural gas, oil, condensate and NGLs volumes sold are not significantly different from the Company's share of production.

Index to Financial Statements

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

The Company calculates and pays royalties on natural gas, oil, condensate and NGLs in accordance with the particular contractual provisions of the lease. Royalty liabilities are recorded in conjunction with the cash receipts for natural gas, oil and NGLs revenues and are included in revenue payable on the Company's consolidated balance sheet.

**Asset Retirement Obligation**

Asset retirement costs and liabilities associated with future site restoration and abandonment of tangible long-lived assets are initially measured at fair value which approximates the cost a third party would incur in performing the tasks necessary to retire such assets. The fair value is recognized in the financial statements as the present value of expected future cash expenditures for site restoration and abandonment. Subsequent to the initial measurement, the effect of the passage of time on the liability for the asset retirement obligation (accretion expense) and the amortization of the asset retirement cost, through depreciation, depletion and amortization, are recognized in the results of operations.

**Foreign Currency Exchange**

The consolidated financial statements of the Company are presented in U.S. dollars. The functional currency for Parent and all consolidated subsidiaries is U.S. dollars. Transactions in currencies other than the functional currency are recorded using the appropriate exchange rate at the time of the transaction.

The majority of the Company's operations are conducted in U.S. dollars. Prior to July 2009, the Company conducted natural gas property development in Australia. The Australian Assets were sold in July 2009, prior to reaching commercial operations. As a result of the sale of the Australian Assets, the Company no longer has long lived assets outside of the U.S. Limited operations are conducted by Parent in Canada.

The Australian and Canadian records are maintained in the local currency and re-measured to the functional currency as follows: monetary assets and liabilities are converted using the balance sheet period-end date exchange rate, while the non-monetary assets and liabilities are converted using the historical exchange rate. Expenses and income items are converted using the weighted average exchange rates for the reporting period. Foreign transaction gains and losses are reported on the consolidated statement of operations.

**Deferred Income Taxes**

Income taxes are accounted for under the asset and liability method. Deferred tax assets and liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax bases, operating loss and tax credit carryforwards. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. Deferred tax assets are routinely evaluated to determine the likelihood of realization and the Company must estimate its expected future taxable income to complete this assessment. Numerous assumptions are inherent in the estimation of future taxable income, including assumptions about matters that are dependent on future events such as future operating conditions, particularly related to prevailing natural gas, oil and NGLs prices, and future financial conditions. The estimates or assumptions used in determining future taxable income are consistent with those used in internal budgets and forecasts. The effect on deferred tax assets and liabilities of a change in tax rates is recognized as income in the period that includes the enactment date. The Company has established a valuation allowance to offset its net deferred tax asset since, on a more likely than not basis, such benefits are not considered recoverable at this time.

**Earnings or Loss per Share**

Basic earnings or loss per share is computed on the basis of the weighted average number of common shares outstanding. Diluted earnings or loss per share is computed based upon the weighted average number of common shares outstanding plus the incremental effect of the assumed issuance of common shares for all potentially dilutive securities. Diluted per share amounts reflect the potential dilution that could occur if securities or other contracts to

issue common shares are exercised or converted to common shares. The treasury stock method is used to determine the dilutive effect of stock options, unvested restricted shares and warrants.

Stock-Based Compensation

The Company reports compensation expense for stock options and restricted common shares granted to officers, directors and employees using the fair value method. Stock-based compensation costs are recorded over the requisite service period,

F- 16

---

Table of Contents

Index to Financial Statements

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

which approximates the vesting period. Stock-based compensation expense is recognized using the “graded-vesting method”, which recognizes compensation costs over the requisite service period for each separately vesting tranche of an award as though the award were, in substance, multiple awards.

The Company records stock-based compensation costs for stock options granted based on the grant-date fair value as calculated using the Black-Scholes-Merton option-pricing model. The Black-Scholes-Merton model requires various highly judgmental assumptions including volatility, forfeiture rates and expected option life. If any of the assumptions used in the Black-Scholes-Merton model change significantly, stock-based compensation expense for future grants may differ materially from that recorded in the current period. Stock-based compensation cost for restricted shares granted is estimated at the grant date based on the prior day’s closing stock price.

Joint Venture Operations

The majority of the Company’s natural gas and oil exploration activities are conducted jointly with others. These consolidated financial statements reflect only the Company’s proportionate interest in such activities.

Industry Segment and Geographic Information

The Company operates in one industry segment, which is the exploration, development and production of natural gas and oil. Historically, the Company’s operational activities have been conducted in the U.S. and Australia, with only the U.S. having revenue generating operating results. All Australian operations were sold on July 13, 2009. As a result, the Company’s current operational activities and the Company’s consolidated revenues are generated from markets exclusively in the U.S., and the Company has no long lived assets located outside the U.S.

Treasury Stock

The Company’s common shares are without par value. Treasury stock purchases are recorded at cost as a reduction to common stock. Common shares are canceled upon repurchase.

Restricted Cash

The Company is required to maintain cash balances that are restricted by provisions of certain banking and other agreements. Restricted cash is invested in short-term instruments at market rates; therefore, the carrying value approximates fair value. Such cash is reported as restricted cash and is excluded from cash and cash equivalents in the consolidated balance sheets.

Recent Accounting Developments

The following recently issued accounting pronouncements have been adopted or may impact us in future periods: Comprehensive Income. In June 2011, the Financial Accounting Standards Board (“FASB”) issued an amendment to previously issued guidance regarding the reporting and presentation of other comprehensive income. The amendments require that all non-owner changes in stockholders’ equity be presented either in a single continuous statement of comprehensive income or in two separate but consecutive statements. In the two-statement approach, the first statement should present total net income and its components followed consecutively by a second statement that should present total other comprehensive income, the components of other comprehensive income and the total of comprehensive income. Regardless of whether an entity chooses to present comprehensive income in a single continuous statement or in two separate but consecutive statements, the entity is required to present on the face of the financial statements reclassification adjustments for items that are reclassified from other comprehensive income to net income in the statement(s) where the components of net income and the components of other comprehensive income are presented. The amendments do not change the items that must be reported in other comprehensive income or when an item of other comprehensive income must be reclassified to net income. This guidance is effective for fiscal years, and interim periods within those years, beginning after December 15, 2011 and should be applied retrospectively. Earlier application is permitted. The adoption of this guidance will not impact our operating results, financial position or cash flows upon adoption.

Fair Value Measurement. In May 2011, the FASB issued an amendment to previously issued guidance regarding fair value measurement and disclosure requirements. The amendments explain how to measure fair value and do not require additional fair value measurements and are not intended to establish valuation standards or affect valuation practices outside of financial reporting. The amendments result in common fair value measurement and disclosure requirements in U.S. GAAP and

F- 17

---

Table of ContentsIndex to Financial Statements

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

International Financial Reporting Standards. This guidance is effective prospectively for interim and annual periods beginning after December 15, 2011. Early application is not permitted. The adoption of this guidance will not impact our operating results, financial position or cash flows upon adoption.

Business Combinations. In December 2010, the FASB's Emerging Issues Task Force issued an amendment to previously issued guidance regarding the pro forma revenue and earnings disclosure requirements for business combinations. The amendments specify that if a public entity presents comparative financial statements, the entity should disclose revenue and earnings of the combined entity as though the business combination(s) that occurred during the current year had occurred as of the beginning of the comparable prior annual reporting period only. The amendments also expand the supplemental pro forma disclosures under current guidance to include a description of the nature and amount of material, nonrecurring pro forma adjustments directly attributable to the business combination included in the reported pro forma revenue and earnings. This guidance is effective prospectively for business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after December 15, 2010. Earlier application is permitted. The adoption of this guidance did not impact our operating results, financial position or cash flows.

## 3. Property, Plant and Equipment

The amount capitalized as natural gas and oil properties was incurred for the purchase and development of various properties in the states of Texas, Pennsylvania, West Virginia, Wyoming and Montana in the U.S. The Company's Australian properties were sold in July 2009. The Company's total property, plant and equipment consists of the following:

	December 31,	
	2011	2010
	(in thousands)	
Natural gas and oil properties, full cost method of accounting:		
Unproved properties	\$78,302	\$162,230
Proved properties	514,357	345,042
Total natural gas and oil properties	592,659	507,272
Furniture and equipment	1,629	1,175
Total property and equipment	594,288	508,447
Impairment of proved natural gas and oil properties	(187,152 )	(187,152 )
Accumulated depreciation, depletion and amortization	(121,396 )	(106,180 )
Total accumulated depreciation, depletion and amortization	(308,548 )	(293,332 )
Total property and equipment, net	\$285,740	\$215,115

The Company's unproved properties not being amortized consisted of the following for the periods indicated:

	December 31,	
	2011	2010
	(in thousands)	
Unproved properties, excluded from amortization:		
Drilling in progress costs	\$3,958	\$17,603
Acreage acquisition costs	68,217	126,388
Capitalized interest	6,127	18,239
Total unproved properties excluded from amortization	\$78,302	\$162,230

For the year ended December 31, 2011, management's evaluation of unproved properties resulted in an impairment of unproved properties. Due to a decline in natural gas prices and the planned reduction in drilling activity for 2012 in East Texas, the Company reclassified \$63.8 million of unproved properties to proved properties at December 31, 2011. For the year ended December 31, 2010, management's evaluation of unproved properties did not result in an impairment.

For the year ended December 31, 2011, management's ceiling test evaluation utilized a weighted average price of \$4.88 per Mcfe and did not result in an impairment of proved properties. For the year ended December 31, 2010, management's

F- 18

---

Table of Contents

Index to Financial Statements

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

ceiling test evaluation utilized a weighted average price of \$3.59 per Mcfe and did not result in an impairment of proved properties. For the year ended December 31, 2009, management's ceiling test evaluation at March 31, 2009 utilized a weighted average price of \$2.66 per Mcfe and resulted in an impairment of proved properties of \$68.7 million.

**Atinum Joint Venture**

In September 2010, Gastar USA entered into a joint venture (the "Atinum Joint Venture") pursuant to a purchase and sale agreement with an affiliate of Atinum Partners Co., Ltd. ("Atinum"), a Korean investment firm. Pursuant to the agreement, at the closing of the transactions on November 1, 2010, Gastar USA assigned to Atinum an initial 21.43% interest in all of its existing Marcellus Shale assets in West Virginia and Pennsylvania, which consisted of approximately 37,600 gross (34,200 net) acres and a 50% working interest in 16 producing shallow conventional wells and one non-producing vertical Marcellus Shale well. Atinum paid Gastar USA approximately \$30.0 million in cash at the closing and paid an additional \$40.0 million of Gastar USA's share of drilling costs over time in the form of a "drilling carry." Upon completion of the funding of the drilling carry, Gastar USA made additional assignments to Atinum, as necessary, so Atinum now owns a 50% interest in the 34,200 net acres of Marcellus Shale rights initially owned by Gastar USA. The terms of the drilling carry required Atinum to fund its ultimate 50% share of drilling, completion and infrastructure costs along with 75% of Gastar USA's ultimate 50% share of those same costs until the \$40.0 million drilling carry had been satisfied. Atinum completed the funding of the drilling carry as of December 31, 2011.

The Atinum Joint Venture is pursuing an initial three-year development program that calls for the partners to drill a minimum of 12 horizontal wells in 2011 and 20 and 24 operated horizontal wells in each of 2012 and 2013, respectively. As of December 31, 2011, 17 operated wells were drilled and cased under the Atinum Joint Venture. Through June 30, 2011, an initial AMI was established for potential additional acreage acquisitions in Ohio and New York along with the counties in West Virginia and Pennsylvania in which the initial Atinum Joint Venture interests were located. Within this initial AMI, Gastar USA will act as operator and is obligated to offer any future lease acquisitions within the AMI to Atinum on a 50/50 basis, and Atinum will pay Gastar USA on an annual basis an amount equal to 10% of lease bonuses and third party leasing costs up to \$20.0 million and 5% of such costs on activities above \$20.0 million. Subsequent to June 30, 2011, Atinum has the right to participate in any leasehold acquisitions made by Gastar USA outside of the initial AMI and within Ohio, New York, West Virginia or Pennsylvania, excluding the counties of Pendleton, Pocahontas, Preston, Randolph and Tucker, West Virginia, on terms identical to those governing the existing Atinum Joint Venture.

**Marcellus Shale Leasehold Acquisition**

In December 2010, Gastar USA completed a \$28.9 million acquisition of undeveloped leasehold in the Marcellus Shale concentrated in Preston, Tucker, Pocahontas, Randolph and Pendleton Counties, West Virginia, including a gathering system comprised of 41 miles of four and six inch steel pipe, a salt water disposal well and five conventional producing wells. This acreage is not included in the Atinum Joint Venture and the counties in which the acquired assets are located are not part of the initial AMI.

**Sale of Petroleum Exploration Licenses 238, 433, and 434 and Repayment of Debt**

On July 13, 2009, Gastar New South Wales and Gastar USA completed the sale of all of the Company's 35% working interest in Petroleum Exploration Licenses ("PEL") 238 (including Petroleum Production License 3), PEL 433, and PEL 434 in New South Wales, Australia and the concurrent sale of the Company's common shares of Gastar Power, the Company's wholly-owned subsidiary holding its 35% working interest in the Wilga Park Power Station (collectively, the "Australian Assets"), to Santos QNT Pty Ltd. and Santos International Holdings Pty Ltd. (collectively, "Santos") for an aggregate purchase price of \$250.4 million (AU\$320.0 million), before transaction costs of \$1.5 million, resulting in a

gain on the sale of assets of \$211.2 million. The sale was made pursuant to a definitive sale agreement dated July 2, 2009 by and among Gatar New South Wales, Gatar USA and Santos. The sale agreement also acknowledged the Company's retention of its right to future cash payments of up to \$10.0 million pursuant to a pre-existing farm-in agreement in the event certain production thresholds are reached on PEL 238.

The Company used the proceeds from the sale of the Australian Assets to (i) repay the \$13.0 million outstanding on its secured original revolving credit facility, (ii) repay in full its \$25.0 million term loan, (iii) repurchase all of its outstanding \$100.0 million 12 <sup>3</sup>/<sub>4</sub>% senior secured notes due December 31, 2012 at a price of 106.375% of par, plus accrued and unpaid interest, (iv) repay, at par, an initial \$10.3 million of its convertible subordinated debentures and (v) repay the remaining \$300,000 of subordinated unsecured notes payable (described in Note 5, "Long-Term Debt").

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

Sale of East Texas Gas Gathering System

On November 16, 2009, Gastar USA completed the sale of all of its interest in the Hilltop gas gathering system (the “Hilltop Gathering System”), located in Leon and Robertson Counties, Texas, pursuant to a purchase and sale agreement with Hilltop Resort GS, LLC (“Hilltop Resort”), dated as of November 16, 2009, whereby Gastar USA conveyed its 70% interest in the Hilltop Gathering System to Hilltop Resort for approximately \$19.1 million, net of transaction costs and expenses. Gastar USA also entered into purchase and sale agreements dated November 16, 2009 with two existing working interest owners in the Hilltop area of East Texas, whereby Gastar USA conveyed the remaining 30% of its interest in the Hilltop Gathering System for an aggregate \$2.7 million, net of working interest owner costs owed to Gastar USA. At the time of the sale, the Hilltop Gathering System was comprised of 20 miles of natural gas pipeline connected to 19 company-operated wells, which produce from the middle and lower Bossier and Knowles formations in East Texas.

On November 16, 2009, concurrent with Gastar USA’s sale of its Hilltop Gathering System, Gastar Texas entered into a gas gathering agreement (“Hilltop Gathering Agreement”) effective November 1, 2009, with Hilltop Resort for an initial term of 15 years. The Hilltop Gathering Agreement covers delivery of Gastar USA’s gross production of natural gas in the Hilltop area of East Texas to certain delivery points provided under the gas sales contract, as well as additional delivery points that, from time to time, may be added. Gastar USA is also obligated to connect new wells that it drills within the area covered by the Hilltop Gathering Agreement to the Hilltop Gathering System. The Hilltop Gathering Agreement provides for a minimum quarterly gathering gross production volume of 50.0 MMcf per day (35.0 MMcf per day net to Gastar USA) times the number of days in the quarter for five years from the effective date of November 1, 2009. If quarterly production is less than the minimum quarterly requirement, the gathering fee is payable on such deficit. If excess quarterly production exists, such excess is carried forward to be used to offset any future deficit quarters. The gathering fee on the initial gross 25 Bcf of production is \$0.325 per Mcf, reducing in steps to \$0.225 per Mcf when cumulative gross production reaches 300 Bcf. In October 2011, the cumulative gross production contractual volume of 25 Bcf was reached and the fee was reduced to \$0.30 per Mcf. For the years ended December 31, 2011, 2010 and 2009, Gastar USA paid \$1.5 million, \$1.3 million and \$78,000, respectively, to Hilltop Resort as a result of actual production volumes being less than minimum contractual volume requirements per the Hilltop Gathering Agreement. Gastar USA does not expect to meet the minimum quarterly requirements in the near future.

4. Short-Term Loan

On November 20, 2009, Parent entered into a \$17.0 million secured short-term loan agreement with the lender parties and administrative agent thereto (the “Short-Term Loan”). Concurrent with the execution of the Short-Term Loan, Parent drew \$17.0 million and used the proceeds, together with cash on hand, to repay all \$19.7 million of its then outstanding 9.75% convertible senior unsecured subordinated debentures due November 20, 2009 (the “Convertible Subordinated Debentures”).

The Short-Term Loan bore interest at the floating prime rate of the lender. The prime rate at December 31, 2009 was 5.0% per annum. Amounts outstanding under the Short-Term Loan were repayable prior to maturity, together with all accrued and unpaid interest relating to the amount prepaid, without prepayment penalty. The Short-Term Loan contained various covenants, including restrictions on liens, restrictions on incurring other indebtedness without the lenders’ consent, restrictions on dividends and other restricted payments and restrictions on entering into certain transactions.

Amounts outstanding under the Short-Term Loan were secured by a second priority lien on all of the issued and outstanding shares of Gastar USA, pursuant to the Second Lien Security Agreement (Pledge) dated November 20, 2009 (“Second Lien”), by and between the Company and the administrative agent for the lenders under the Short-Term

Loan. Additionally, amounts outstanding under the Short-Term Loan were secured by a security interest in all funds of the Company on deposit with the administrative agent and each lender that was a party to the Short-Term Loan. In order to provide for Parent's borrowings under the Short-Term Loan and related repayments and the granting of the Second Lien, on November 20, 2009, Gostar USA, together with Parent and certain of its subsidiaries as the guarantors ("Subsidiary Guarantors"), and the lenders and administrative agent party thereto, entered into the Consent and First Amendment to Amended and Restated Credit Agreement (the "First Amendment") amending the Revolving Credit Facility. See Note 5, "Long-Term Debt, Revolving Credit Facility." The Short-Term Loan was repaid in full on January 8, 2010.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

5. Long-Term Debt

Amended and Restated Revolving Credit Facility

On October 28, 2009, Gastar USA, together with Parent and Subsidiary Guarantors, and the lenders, administrative agent and letter of credit issuer party thereto, entered into an amended and restated credit facility, amending and restating in its entirety the original revolving credit facility (the “Revolving Credit Facility”). The Revolving Credit Facility provided an initial borrowing base of \$47.5 million, with borrowings bearing interest, at Gastar USA's election, at the prime rate or LIBO rate plus an applicable margin. Pursuant to the Revolving Credit Facility, the applicable interest rate margin varies from 1.0% to 2.0% in the case of borrowings based on the prime rate and from 2.5% to 3.5% in the case of borrowings based on LIBO rate, depending on the utilization percentage in relation to the borrowing base. An annual commitment fee of 0.50% is payable quarterly, based on the unutilized balance of the borrowing base. The Revolving Credit Facility had an original scheduled maturity date of January 2, 2013.

In order to provide for the Company's borrowings under the Short-Term Loan and related repayments and the granting of the Second Lien on November 20, 2009, Gastar USA, together with Parent and Subsidiary Guarantors and the lender parties and administrative agent thereto, entered into the First Amendment amending the Revolving Credit Facility. In addition to permitting the incurrence of debt under the Short-Term Loan, the First Amendment also amended the Revolving Credit Facility, by, among other things, reducing the borrowing base from \$47.5 million to \$30.5 million until the Short-Term Loan was repaid in full, at which time the borrowing base would be automatically increased to \$47.5 million until the next scheduled borrowing base redetermination. The borrowing base was increased to \$47.5 million from \$30.5 million subsequent to the repayment of the Short-Term Loan in January 2010. The Revolving Credit Facility is guaranteed by Parent and all of its current domestic subsidiaries and all future domestic subsidiaries formed during the term of the Revolving Credit Facility. Borrowings and related guarantees under the Revolving Credit Facility are secured by a first priority lien on all domestic natural gas and oil properties owned by or later acquired by Gastar USA and its subsidiaries, excluding de minimus value properties as determined by the lender. The facility is secured by a first priority pledge of the stock of each domestic subsidiary, a first priority interest on all accounts receivable, notes receivable, inventory, contract rights, general intangibles and material property of the Issuer and 65% of the stock of each foreign subsidiary of Gastar USA.

The Revolving Credit Facility contains various covenants, including among others:

• Restrictions on liens;

• Restrictions on incurring other indebtedness without the lenders' consent;

• Restrictions on dividends and other restricted payments;

• Maintenance of a minimum consolidated current ratio as of the end of each quarter of not less than 1.0 to 1.0, as adjusted;

• Maintenance of a maximum ratio of indebtedness to EBITDA on a rolling four quarter basis, as adjusted, of not greater than 4.0 to 1.0; and

• Maintenance of an interest coverage ratio on a rolling four quarter basis, as adjusted, of EBITDA to interest expense, as of the end of each quarter, to be less than 2.5 to 1.0.

All outstanding amounts owed under the Revolving Credit Facility become due and payable upon the occurrence of certain usual and customary events of default, including among others:

• Failure to make payments under the Revolving Credit Facility;

• Non-performance of covenants and obligations continuing beyond any applicable grace period; and

• The occurrence of a Change of Control (as defined in the Revolving Credit Facility) of the Parent.

Should there occur a Change of Control of Parent, then, five days after such occurrence, immediately and without notice, (i) all amounts outstanding under the Revolving Credit Facility shall automatically become immediately due

and payable and (ii) the commitments shall immediately cease and terminate unless and until reinstated by the lender in writing. If amounts outstanding under the Revolving Credit Facility become immediately due, the obligation of Gastar USA, with respect to any commodity hedge exposure, shall be to provide cash as collateral to be held and administered by the lender as collateral agent.

F- 21

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

Following the scheduled semi-annual borrowing base redetermination in May 2010, on June 24, 2010, Gastar USA, together with the other parties thereto, entered into the Second Amendment to the Amended and Restated Credit Agreement (the “Second Amendment”) amending that certain Amended and Restated Credit Agreement dated October 28, 2009 (as amended by the First Amendment, the Second Amendment, the Third Amendment (as defined below) and the Fourth Amendment (as defined below), the “Credit Agreement”). The Second Amendment amended the Revolving Credit Facility, by, among other things, allowing Gastar USA (i) to hedge up to 80% of the proved developed producing (“PDP”) reserves reflected in its reserve report using hedging other than floors and protective spreads, (ii) relatedly, to present to the administrative agent a report showing any PDP additions resulting from new wells or the conversion of proved developed non-producing reserves to PDP reserves since the last reserve report in order to hedge the revised PDP reserves, and (iii) removing limitations on hedging using floors and protective spreads. Additionally, the Second Amendment reduced the borrowing base under the Revolving Credit Facility to \$40.0 million from \$47.5 million. On October 1, 2010, the borrowing base was increased to \$47.5 million from the previous borrowing base of \$40.0 million.

On June 14, 2011, Gastar USA, together with the parties thereto, entered into the Third Amendment to the Amended and Restated Credit Agreement (the “Third Amendment”). The Third Amendment amended the Revolving Credit Facility, by, among other things, allowing Gastar USA to issue Series A Preferred Stock (as defined below) described in Note 10, “Capital Stock” and, as long as no default exists or would result from such payment and availability under the Revolving Credit Facility equals at least 10% of the then-existing borrowing base under the Revolving Credit Facility, pay cash dividends on the Series A Preferred Stock of no more than \$10.0 million in the aggregate in each calendar year.

On December 2, 2011, Gastar USA, together with the parties thereto, entered into the Fourth Amendment to Amended and Restated Credit Agreement, effective as of November 10, 2011 (the “Fourth Amendment”). The Fourth Amendment amended the Credit Agreement, by, among other things, (i) extending the maturity date on borrowings under the Revolving Credit Facility to September 30, 2015; (ii) allowing Gastar USA to hedge up to 100% of the PDP reserves reflected in its reserve report using hedging other than floors and protective spreads; and (iii) allowing no more than ten separate LIBO Rate Loans to be outstanding at one time.

As of December 31, 2011, the Revolving Credit Facility had a borrowing base of \$50.0 million, with \$30.0 million of borrowings outstanding and availability of \$20.0 million. Borrowing base redeterminations are scheduled semi-annually in May and November of each calendar year, with the next regularly scheduled redetermination set for November 2012. Gastar USA has requested that the May 2012 redetermination be accelerated to March 2012. Gastar USA and the lenders may request one additional unscheduled redetermination annually. On March 5, 2012, Gastar USA was notified by its lenders that, effective immediately, the borrowing base was increased from \$50.0 million to \$100.0 million resulting in current availability of \$73.0 million as of March 6, 2012.

At December 31, 2011, Gastar USA was not in compliance with the current ratio covenant under the Revolving Credit Facility. Gastar USA was granted a waiver in regards to the current ratio at December 31, 2011 and in conjunction with such waiver, Gastar USA was in compliance with all financial covenants under the Revolving Credit Facility at December 31, 2011. Gastar USA does not anticipate any issues with current ratio compliance in the future.

Other Debt

Credit support for the Company’s open derivatives at December 31, 2011 is provided through inter-creditor agreements or open accounts of up to \$5.0 million.

\$25.0 Million Term Loan

On February 17, 2009, Gastar USA drew \$25.0 million under a \$25.0 million term loan (the “\$25.0 Million Term Loan”) to fund current and future capital commitments and operating costs. The \$25.0 Million Term Loan bore interest at a fixed rate of 20% per annum and was to mature on February 15, 2012. The annual effective interest rate, after amortization of the fees paid to establish the \$25.0 Million Term Loan was 21.9%. The \$25.0 Million Term Loan contained various customary covenants, including restrictions on liens, restrictions on incurring other indebtedness without the lender’s consent, restrictions on dividends and other restricted payments, and maintenance of various financial ratios consistent with the Company's original revolving credit facility. Amounts outstanding under the \$25.0 Million Term Loan could be repaid prior to maturity, with a prepayment premium of 10% if repaid prior to December 31, 2009, and a prepayment premium of 5% if repaid between January 1, 2010 and December 31, 2010. Upon a Change of Control (as defined in the \$25.0 Million Term Loan), all amounts outstanding under the \$25.0 Million Term Loan were to be immediately due and payable.

GASTAR EXPLORATION LTD. AND SUBSIDIARIES

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

Amounts outstanding under the \$25.0 Million Term Loan were secured by a first priority lien on Gastar USA's and certain of Parent's subsidiaries' primary natural gas and oil assets and certain other properties. The \$25.0 Million Term Loan and other existing and future indebtedness incurred under the Company's original revolving credit facility were senior to the liens securing the 12<sup>3/4</sup>% Senior Secured Notes.

On July 13, 2009, the Company used approximately \$27.5 million of the proceeds from the Australian Assets sale, described above, to repay in full, and thereby terminate, the \$25.0 Million Term Loan.

12<sup>3/4</sup>% Senior Secured Notes

On November 29, 2007, Gastar USA sold \$100.0 million aggregate principal amount of 12<sup>3/4</sup>% senior secured notes (the "12<sup>3/4</sup>% Senior Secured Notes") at an issue price of 99.50% pursuant to an indenture, dated as of November 29, 2007 (the "Base Indenture"), by and among Parent, Gastar USA, Wells Fargo Bank, National Association, as trustee and Collateral Agent (the "Trustee") and certain subsidiaries of Parent. The 12<sup>3/4</sup>% Senior Secured Notes were fully and unconditionally guaranteed (the "Guarantees") jointly and severally by Gastar USA, Parent, and all of Parent's existing and future material domestic subsidiaries. The 12<sup>3/4</sup>% Senior Secured Notes and the Guarantees were secured by a second lien on Gastar USA's principal domestic natural gas and oil properties and other assets that also secured the Company's original revolving credit facility, subject to certain exceptions. The 12<sup>3/4</sup>% Senior Secured Notes were to mature on December 1, 2012. On February 16, 2009, the parties to the Indenture entered into a supplemental indenture with the Trustee to amend and modify the Indenture (the "Supplemental Indenture" and together with the Base Indenture, the "Indenture") to enable the Company to enter into the \$25.0 Million Term Loan.

On July 13, 2009, Gastar USA initiated an offer (the "Asset Sale Offer") to purchase any and all of its outstanding 12<sup>3/4</sup>% Senior Secured Notes from the holders upon the terms and subject to the conditions set forth in the asset sale offer statement, dated July 13, 2009 (the "Asset Sale Offer Statement"). The Asset Sale Offer Statement was made in accordance with the terms of the Indenture.

The purpose of the Asset Sale Offer was to comply with the provisions of the Indenture, whereby if the Company had major asset sale excess proceeds (as defined therein) following the receipt of net proceeds from a sale of assets, the Company was required to offer to purchase the maximum principal amount of 12<sup>3/4</sup>% Senior Secured Notes that could be purchased with such major asset sale excess proceeds.

On August 6, 2009, the note-holders tendered to the Company the outstanding \$100.0 million principal amount of the 12<sup>3/4</sup>% Senior Secured Notes at 106.375% of par, plus accrued and unpaid interest. On August 7, 2009, the Company used a portion of the net proceeds from the sale of the Australian Assets to retire in full the 12<sup>3/4</sup>% Senior Secured Notes and to discharge all of its obligations under the Indenture by directly tendering payment of \$108.7 million, including accrued interest, to the note holders and ultimate cancellation of the 12<sup>3/4</sup>% Senior Secured Notes by the Trustee.

Convertible Subordinated Debentures

In November 2004, the Company issued \$30.0 million of Convertible Subordinated Debentures. The Convertible Subordinated Debentures had a term of five years, were due November 20, 2009 and bore interest at 9.75% per annum, payable quarterly. As of September 30, 2009, a total of \$10.3 million of Convertible Subordinated Debentures had been tendered, at par, to the Company for early retirement. Concurrent with the execution of the Short-Term Loan on November 20, 2009, the Company drew \$17.0 million and used the proceeds, together with cash on hand, to repay all \$19.7 million of outstanding Convertible Subordinated Debentures.

Subordinated Unsecured Notes Payable

The Company's \$3.25 million 10.0% subordinated unsecured notes payable (the "Subordinated Unsecured Notes Payable") matured from April to September 2009. As of December 31, 2009, the Company had repaid all outstanding amounts under the Subordinated Unsecured Notes Payable.

## 6. Asset Retirement Obligation

A summary of the activity related to the asset retirement obligation is as follows:

	For the Years Ended December 31,	
	2011	2010
	(in thousands)	
Asset retirement obligation, beginning of year	\$ 7,249	\$ 5,943
Liabilities incurred during period	492	1,023
Accretion expense	534	396
Revision in previous estimates and other	—	(113)
Asset retirement obligation, end of year	\$ 8,275	\$ 7,249

## 7. Fair Value Measurements

The Company's financial assets and liabilities are measured at fair value on a recurring basis. The Company discloses its recognized non-financial assets and liabilities, such as asset retirement obligations, unproved properties and other property and equipment, at fair value on a non-recurring basis. For non-financial assets and liabilities, the Company is required to disclose information that enables users of its financial statements to assess the inputs used to develop these measurements. The Company assesses its unproved properties for impairment whenever events or circumstances indicate the carrying value of those properties may not be recoverable. The fair value of the unproved properties is measured using an income approach based upon internal estimates of future production levels, current and future prices, drilling and operating costs, discount rates, current drilling plans and favorable and unfavorable drilling activity on the properties being evaluated and/or adjacent properties, which are Level 3 inputs. During the year ended December 31, 2011, the Company recognized an impairment of unproved properties and reclassified from unproved to proved properties \$63.8 million due to a decline in natural gas prices and the planned reduction in drilling activity for 2012 in East Texas. During the year ended December 31, 2010, the Company's evaluation of unproved properties did not result in an impairment. As no other fair value measurements are required to be recognized on a non-recurring basis at December 31, 2011, no additional disclosures are provided at December 31, 2011.

As defined in the guidance, fair value is the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date (an exit price). To estimate fair value, the Company utilizes market data or assumptions that market participants would use in pricing the asset or liability, including assumptions about risk and the risks inherent in the inputs to the valuation technique. These inputs can be readily observable, market corroborated or generally unobservable. The guidance establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted market prices in active markets for identical assets or liabilities ("Level 1") and the lowest priority to unobservable inputs ("Level 3"). The three levels of the fair value hierarchy are as follows:

Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities. The Company's cash equivalents consist of short-term, highly liquid investments, which have maturities of 90 days or less, including sweep investments and money market funds.

Level 2 inputs are quoted prices for similar assets and liabilities in active markets or inputs that are observable for the asset or liability, either directly or indirectly through market corroboration, for substantially the full term of the financial instrument.

Level 3 inputs are measured based on prices or valuation models that require inputs that are both significant to the fair value measurement and less observable from objective sources. These inputs may be used with internally developed methodologies or third party broker quotes that result in management's best estimate of fair value. The Company's

valuation models consider various inputs including (i) quoted forward prices for commodities, (ii) time value, (iii) volatility factors and (iv) current market and contractual prices for the underlying instruments. Level 3 instruments are natural gas costless collars, index, basis and fixed price swaps, put and call options and warrants. At each balance sheet date, the Company performs an analysis of all applicable instruments and includes in Level 3 all of those whose fair value is based on significant unobservable inputs.

F- 24

---

Table of ContentsIndex to Financial Statements

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

As required, financial assets and liabilities are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. The Company's assessment of the significance of a particular input to the fair value measurement requires judgment and may affect the valuation of fair value assets and liabilities and their placement within the fair value hierarchy levels. The determination of the fair values below incorporates various factors, including the impact of the counterparty's non-performance risk with respect to the Company's financial assets and the Company's non-performance risk with respect to the Company's financial liabilities. The Company has not elected to offset the fair value amounts recognized for multiple derivative instruments executed with the same counterparty, but report them gross on its consolidated balance sheets.

The following tables set forth by level within the fair value hierarchy the Company's financial assets and liabilities that were accounted for at fair value on a recurring basis as of December 31, 2011 and 2010:

	Fair value as of December 31, 2011			
	Level 1	Level 2	Level 3	Total
	(in thousands)			
Assets:				
Cash and cash equivalents	\$10,647	\$—	\$—	\$10,647
Restricted cash	50	—	—	50
Commodity derivative contracts	—	—	23,515	23,515
Liabilities:				
Commodity derivative contracts	—	—	(7,642)	(7,642)
Total	\$10,697	\$—	\$15,873	\$26,570
	Fair value as of December 31, 2010			
	Level 1	Level 2	Level 3	Total
	(in thousands)			
Assets:				
Cash and cash equivalents	\$7,439	\$—	\$—	\$7,439
Restricted cash	50	—	—	50
Commodity derivative contracts	—	—	18,711	18,711
Liabilities:				
Commodity derivative contracts	—	—	(3,512)	(3,512)
Total	\$7,489	\$—	\$15,199	\$22,688

The table below presents a reconciliation of the assets and liabilities classified as Level 3 in the fair value hierarchy for the years ended December 31, 2011 and 2010. Level 3 instruments presented in the table consist of net derivatives that, in management's opinion, reflect the assumptions a marketplace participant would have used at December 31, 2011 and 2010.

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

	For the Years Ended December 31,	
	2011	2010
	(in thousands)	
Balance at beginning of period	\$ 15,199	\$ 7,638
Total gains (realized or unrealized):		
included in earnings (1)	12,068	15,509
included in other comprehensive income	—	—
Purchases	—	—
Issuances	—	—
Settlements	(11,394 )	(7,948 )
Transfers in and (out) of Level 3	—	—
Balance at end of period	\$ 15,873	\$ 15,199
The amount of total gains for the period included in earnings attributable to the change in unrealized gains or losses relating to assets still held at December 31, 2011 and 2010	\$ 2,336	\$ 11,419

(1) Included in total revenues and other income (expense) on the statement of operations.

At December 31, 2011, the estimated fair value of accounts receivable, prepaid expenses, accounts and revenue payables and accrued liabilities approximates their carrying value due to their short-term nature.

The fair value guidance, as amended, establishes that every derivative instrument is to be recorded on the balance sheet as either an asset or liability measured at fair value. See Note 9, “Derivative Instruments and Hedging Activity.”

#### 8. Equity Compensation Plans

##### Share-Based Compensation Plan

At the annual meeting of shareholders held June 4, 2009 (the “Annual Meeting”), Parent's shareholders approved amendments to Parent's 2006 Long-Term Stock Incentive Plan (the “2006 Plan”) that, effective as of April 1, 2009, merged the Parent's Stock Option Plan (the “2002 Stock Option Plan”) with and into the 2006 Plan so that all outstanding equity awards and all future equity awards to be made to employees, officers and directors of the Company would be under the 2006 Plan. The merging of the 2002 Stock Option Plan with and into the 2006 Plan resulted in the cessation of the existence of the 2002 Stock Option Plan and the transfer of all common shares previously reserved and available for issuance under the 2002 Stock Option Plan, including any common shares subject to outstanding stock option awards previously granted under the 2002 Stock Option Plan prior to the effective date of the amendments, to the common shares reserved under the 2006 Plan.

Additionally, the amendments to the 2006 Plan (i) provide that the Compensation Committee of the Parent, at its discretion, may provide, in an award agreement, that an individual who is granted an award under the 2006 Plan (a “participant”) may elect to have common shares withheld from or netted against the total number of common shares otherwise issuable to such participant pursuant to his award in order to pay the exercise or purchase price of such award and/or to satisfy all employer tax withholding obligations with respect to the participant's award under the 2006 Plan, (ii) clarify that common shares issuable under the 2006 Plan and forfeited back to the 2006 Plan will be deemed not to have been issued under the 2006 Plan and will again be available for the grant of an award under the 2006 Plan, (iii) provide that common shares withheld from or netted against an award granted under the 2006 Plan for payment of (a) the exercise or purchase price of an award and (b) all applicable employer tax withholding obligations associated with an award will be deemed not to have been issued under the 2006 Plan and will again be available for the grant of an award under the 2006 Plan, (iv) provide that the maximum number of common shares that may be subject to stock

options, bonus stock awards and stock appreciation rights granted to any one individual during any calendar year may not exceed 200,000 common shares (subject to adjustment pursuant to Section 11(a) of the 2006 Plan) and (v) provide that the definition of "performance criteria" in the 2006 Plan include a criteria relating to the growth of proved natural gas and oil reserves of the Company.

The 2006 Plan authorizes Parent's Board of Directors (the "Parent Board") to issue stock options, stock appreciation rights, bonus stock awards and any other type of award, which are consistent with the 2006 Plan's purposes to directors, officers

F- 26

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

and employees of the Company and its subsidiaries covering a maximum of 6.0 million common shares. The contractual lives and vesting periods for grants are determined by the Parent Board at the time a grant is awarded. Recent stock option grants have an expiration of ten years. The vesting schedule for stock option grants has varied from two years to four years but generally has been over a four-year period vesting at 25% per year beginning on the first anniversary date of the grant. Stock options granted pursuant to the 2006 Plan have exercise prices determined by the Parent Board, but an exercise price cannot be less than the market price on the date immediately prior to the date of grant as reported by any stock exchange on which Parent's common shares are listed. The vesting period for recent restricted common stock grants has been from two to four years, vesting annually from the date of grant in equal proportions.

On August 3, 2009, Parent's common shares began trading on a post 1-for-5 reverse split (the "1-for-5 Reverse Split") basis. All common shares and per share information has been adjusted to reflect the 1-for-5 Reverse Split. See Note 10, "Capital Stock."

At December 31, 2011, 1,143,490 common shares of Parent were available for future stock-based compensation grants under the 2006 Plan. All common shares issued upon the exercise of stock option grants or vesting of restricted share grants are authorized, issued by Parent and are fully paid and non-assessable.

Determining Fair Value of Stock Options

In determining the fair value of stock option grants, the Company utilized the following assumptions:

Valuation and Amortization Method. The Company estimates the fair value of stock option awards using the Black-Scholes-Merton valuation model. The fair value of all awards is expensed using the "graded-vesting method." Expected Life. The expected life of stock options granted represents the period of time that stock options are expected, on average, to be outstanding. The Company determined the expected life to be 6.25 years, based on historical information, for all stock options issued with four-year vesting periods and ten-year grant expirations.

Expected Volatility. Using the Black-Scholes-Merton valuation model, the Company estimates the volatility of Parent's common shares at the beginning of the quarter in which the stock option is granted. The volatility is based on weighted average historical movements of Parent's common share price on the NYSE Amex over a period that approximates the expected life.

Risk-Free Interest Rate. The Company utilizes a risk-free interest rate equal to the rate of U.S. Treasury zero-coupon issues as of the date of grant with a term equivalent to the stock option's expected life.

Expected Dividend Yield. Parent has not paid any cash dividends on its common shares and does not anticipate paying any cash dividends in the foreseeable future. Consequently, a dividend yield of zero is utilized in the Black-Scholes-Merton valuation model.

Expected Forfeitures. Forfeitures of unvested stock options and restricted common shares are calculated at the beginning of the year as a percentage of all stock option and restricted common share grants. For 2011, 2010 and 2009, the Company used forfeiture rates in determining compensation expense of 8.5%, 9.8% and 6.5%, respectively. The fair value of each stock option grant is estimated on the date of grant using the Black-Scholes-Merton valuation pricing model. The table below summarizes the number of stock options granted and the fair value assumptions for the stock options granted for the period indicated:

	For the Years Ended December 31,		
	2011	2010	2009
Stock options granted during the period	—	80,000	266,300
Expected life (in years)	—	6.25	6.25
Expected volatility	—	68.1	% 59.3% - 60.2%

Edgar Filing: GASTAR EXPLORATION LTD - Form 10-K

Risk-free interest rate	—	2.33% - 2.94%	1.97% - 2.81%
Expected dividend rate	—	% 0.00	% 0.00 %

The weighted average grant date fair value of stock options granted and the intrinsic value of stock options exercised are

F- 27

---

Table of ContentsIndex to Financial Statements

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

shown below for the periods indicated:

	For the Years Ended December 31,		
	2011	2010	2009
	(in thousands, except per share data)		
Weighted average grant date fair value per stock option granted	\$—	\$2.66	\$1.52
Intrinsic value of stock options exercised (1)	\$18	\$7	\$—
Grant date fair value of stock options vested	\$282	\$739	\$1,334

(1) Intrinsic value of stock options is calculated using the difference between the common share price on the date of exercise and the exercise price times the number of stock options exercised.

Stock Option Activity

The following tables summarize certain information related to outstanding stock options under the 2006 Plan as of and for the year ended December 31, 2011:

	Shares	Weighted Average Exercise Price per Share	Weighted Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Outstanding at December 31, 2010	1,107,100	\$ 10.85		
Granted	—	—		
Exercised	(15,000 )	2.70		
Canceled/Expired	—	—		
Forfeited	(108,200 )	8.24		
Outstanding at December 31, 2011	983,900	\$ 11.26		
Options vested and exercisable at December 31, 2011	837,750	\$ 12.66	4.95	\$51

	Shares	Weighted Average Fair Value per Share	Weighted Average Exercise Price per Share	Weighted Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Outstanding non-vested options at December 31, 2010	289,275	\$ 2.21			
Granted	—	—			
Vested	(98,125 )	2.87			
Forfeited	(45,000 )	1.57			
Outstanding non-vested options at December 31, 2011	146,150	\$ 1.97	\$ 3.25	7.64	\$49

Unrecognized expense as of December 31, 2011 for all outstanding options is \$82,000 and will be recognized over a weighted average period of 1.64 years.

Table of ContentsIndex to Financial Statements

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

## Restricted Share Activity

The following table summarizes information related to restricted shares at December 31, 2011:

	Shares	Weighted Average Fair Value per Share	Weighted Average Remaining Contractual Term (in years)	Aggregate Intrinsic Value (in thousands)
Non-vested restricted shares outstanding at December 31, 2010	1,162,089	\$ 5.38		
Granted	774,567	4.15		
Vested	(391,627)	) 6.22		
Forfeited	(143,698)	) 5.32		
Outstanding non-vested restricted shares at December 31, 2011	1,401,331	\$ 4.47	8.50	\$4,456

The following table summarizes the weighted average grant date fair value of restricted shares granted and the total fair value of shares vested for the periods indicated:

	For the Years Ended December 31,		
	2011	2010	2009
	(in thousands, except per share data)		
Weighted average grant date fair value per restricted share	\$4.15	\$4.84	\$6.03
Total fair value of restricted shares vested	\$2,436	\$2,121	\$1,480

Unrecognized compensation expense as of December 31, 2011 for all outstanding restricted share awards is \$2.6 million and will be recognized over a weighted average period of 2.50 years.

## Stock-Based Compensation Expense

For the years ended December 31, 2011, 2010 and 2009, the Company recorded stock-based compensation expense for stock options and restricted shares granted using the fair-value method of \$2.6 million, \$2.8 million and \$3.5 million, respectively. All stock-based compensation costs were expensed and not tax affected, as the Company currently records no U.S. income tax expense.

As of December 31, 2011, the Company had approximately \$2.7 million of total unrecognized compensation cost related to unvested stock options and restricted shares, which is expected to be amortized over the following periods:

	Amount (in thousands)
2012	\$1,631
2013	749
2014	258
2015	36
Total	\$2,674

## 9. Derivative Instruments and Hedging Activity

The Company maintains a commodity price risk management strategy that uses derivative instruments to minimize significant, unanticipated earnings fluctuations that may arise from volatility in commodity prices. The Company uses

costless collars, index, basis and fixed price swaps and put and call options to hedge natural gas price risk. Effective October 1, 2008, the Company elected to discontinue hedge accounting on all existing derivative contracts and

F- 29

---

Table of ContentsIndex to Financial Statements

## GASTAR EXPLORATION LTD. AND SUBSIDIARIES

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS – (Continued)

elected not to designate any derivative contracts as cash flow hedges. Any hedge effectiveness related to the Company's previous cash flow hedging relationships were to remain in other comprehensive income until the underlying forecasted transactions affected earnings. As a result, for the year ended December 31, 2009, the Company reported a gain of \$2.6 million, which was reclassified into earnings as a result of previously discontinued cash flow hedges. As of December 31, 2009, all other comprehensive income had been reclassified to earnings. All derivative contracts are carried at their fair value on the balance sheet and all unrealized gains and losses are recorded in the statement of operations in unrealized natural gas hedge gain (loss), while realized gains and losses related to contract settlements are recognized in natural gas and oil revenues. For the years ended December 31, 2011 and 2010, the Company reported unrealized gains of \$2.3 million and \$11.2 million, respectively. For the year ended December 31, 2009, the Company reported an unrealized loss of \$7.8 million.

As of December 31, 2011, the following derivative transactions were outstanding with the associated notational volumes and weighted average underlying hedge prices:

Settlement Period	Derivative Instrument	Average Daily Volume (in MMBtu's)	Total of Notional Volume	Base Fixed Price	Floor (Long)	Short Put	Ceiling (Short)
2012	Put spread	13,028	4,770,420	\$—	\$6.00	\$4.05	\$—
2012	Costless three-way collar	7,410	2,711,580	—	5.73	4.00	6.88
2012 (1)	Call spread	2,000	550,000	—	—	—	4.50
2012	Basis - HSC (2)	5,000	1,830,000	(0.08)	—	—	—

2013	Basis - CIG (3)	650	237,250	(0.21)	—	—	—
2014	Short calls	2,500	912,500	—	—	—	6.00

(1)For the period April to December 2012

(2)East Houston-Katy – Houston Ship Channel

(3)Inside FERC Colorado Interstate Gas, Rocky Mountains

As of December 31, 2011, all of the Company's economic derivative hedge positions were with a multinational energy company or large financial institutions, which are not known to the Company to be in default on their derivative positions. Credit support for the Company's open derivatives at December 31, 2011 is provided under the Revolving Credit Facility through inter-creditor agreements or open credit accounts of up to \$5.0 million. The Company is exposed to credit risk to the extent of non-performance by the counterparties in the derivative contracts discussed above; however, the Company does not anticipate non-performance by such counterparties. None of the Company's derivative instruments contains credit-risk related contingent features.

In conjunction with certain derivative hedging activity, the Company deferred the payment of certain put premiums for the production month period July 2010 through December 2012. The put premium liabilities become payable monthly as the hedge production month becomes the prompt production month. The Company began amortizing the deferred put premium liabilities during July 2010. The following table provides information regarding the deferred put

premium liabilities for the periods indicated:

F- 30

	December 31, 2011	December 31, 2010
	(in thousands)	
Current commodity derivative premium payable	\$4,725	\$ 3,451
Long-term commodity derivative premium payable	—	4,725
Total unamortized put premium liabilities	\$4,725	\$ 8,176

## Warrants

Parent reclassified the fair value of its warrants to purchase common stock, which had exercise price reset features, from equity to liability status as if these warrants were treated as a derivative liability since their date of issue in June 2008. On January 1, 2009, Parent reclassified from additional paid-in-capital, as a cumulative effect adjustment, \$5.4 million to beginning retained earnings and did not recognize any value to common stock warrant liability for representing the fair value of such warrants on such date. The fair value of the warrants to purchase common stock was zero as of December 31, 2011 and 2010, respectively, and Parent did not recognize any unrealized gains or losses in other income for the change in fair value of these warrants for the year ended December 31, 2011. Parent recognized \$205,000 in unrealized gains in other income for the change in fair value of these warrants for the year ended December 31, 2010. The warrants expired on December 11, 2011.

## Additional Disclosures about Derivative Instruments and Hedging Activities

The tables below provide information on the location and amounts of derivative fair values in the consolidated statement of financial position and derivative gains and losses in the consolidated statement of operations for derivative instruments that are not designated as hedging instruments:

Fair Values of Derivative Instruments			
Derivative Assets (Liabilities)			
Balance Sheet Location	Fair Value	December 31, 2011	December 31, 2010
