ANGLO SWISS RESOURCES AIRBORNE GEOPHYSICS COMPLETED

ON THE LI 201 DIAMONDIFEROUS KIMBERLITE,

FRY INLET DIAMOND PROPERTY, LAC DE GRAS, NWT

Anglo Swiss Resources Inc. (TSX.V-ASW / OTCBB ASWRF) is pleased to report that the initial stage of the 2006 exploration program consisting of a detailed airborne geophysical survey of the eastern portion of the 91,856 acre Fry Inlet Property has been completed. This portion of the Fry Inlet Diamond property (New Shoshoni Ventures - Option/JV release dated June 27, 2005) lies within the Corridor of Hope and the newly termed Ekati Trend, some 50 kilometers north of the milling plant site at the Ekati Diamond Mine.

The eastern portion of the Fry Inlet Diamond property contains the LI-201 kimberlite, which was determined to be significantly diamondiferous during early stage exploration drilling performed in 1997 by Kennecott Canada Exploration Inc. Previous exploration utilizing older technology reported 8 geophysical anomalies on the eastern portion of the property; management is hopeful that present day technology will improve the rate of discovery of new kimberlites.

Fugro Airborne Surveys Corp. of Mississauga, Ontario, acting as contractor for Anglo Swiss Resources, will now analyse the data and report results to the Company shortly. During the survey multi-channel electromagnetic and high-sensitivity magnetic geophysical measurements were taken approximately every 4 meters along the survey lines. A total of 1,695 line-kilometers were flown during this survey along parallel flight lines spaced 100 meters apart. The survey results will allow Anglo Swiss to select drill targets for the next phase of exploration.

Anglo Swiss will continue to evaluate other diamond properties within the Lac de Gras/Slave Craton area that meet its acquisition criteria. Anglo Swiss is the majority holder of over 170,000 acres of claims of merit in under explored areas with unexplained kimberlite indicator mineral trains and/or kimberlite targets near known kimberlites and diamond mining operations.

In light of the close proximity to producing diamond mines, the presence of numerous diamondiferous kimberlites and kimberlite indicator minerals, management is of the opinion that these claims are highly prospective for the further discovery of diamonds. The Company controls 4 distinct properties of merit as it works towards establishing itself towards the corporate goal of discovering a diamond mine within the Lac de Gras region.

Corporate Website Updated

The Company's website www.anglo-swiss.com has been redesigned to reflect the Company's mandate to discover the next diamond mine in the Lac de Gras region of the NWT. The site contains all of the projects the Company is currently involved in and offers a power point presentation, diamond brochure, maps, pictures, and reports etc.

On behalf of the Board of Directors of

Anglo Swiss Resources Inc.,

(s) Len Danard

THE COMPANY RELIES ON LITIGATION PROTECTION FOR FORWARD LOOKING STATEMENTS.
