SMITH & NEPHEW ACQUIRES OSTEOBIOLOGICS, INC.

Provides the only off-the-shelf bioabsorbable implant for articular cartilage repair on the market in Europe

11 July 2006

Smith & Nephew plc (LSE: SN, NYSE: SNN) announced today its acquisition of privately-held, Texas-based, OsteoBiologics, Inc. (OBI).

OBI markets innovative bioabsorbable bone graft substitutes (BGS) in Europe to repair cartilage defects in the knee and offers the TruFit(TM) BGS Plugs in the U.S. as a bone void filler. OBI's products are an exciting addition to Smith & Nephew's existing comprehensive arthroscopy portfolio and will be sold through Smith & Nephew Endoscopy's global sales force.

Smith & Nephew has agreed to pay a net consideration of \$72.3m in cash for OBI, whose 2005 sales revenues were \$3.3m. The acquisition is expected to reduce earnings by \$7m in the second half of 2006 and be broadly neutral in 2007.

OBI's primary product marketed in Europe, TruFit(TM) CB, is a one-step arthroscopic procedure for repairing bone and articular cartilage defects. Cartilage is a protective covering of the articular surfaces of bones that reduces friction and provides flexibility within the joint. Cartilage defects are often a result of traumatic injury or degenerative conditions and are often found in conjunction with meniscal tears or ACL injuries. There is strong evidence that articular cartilage defects can lead to osteoarthritis.

Currently, less than 20 percent of cartilage defects in the knee are treated due
