Review of financial and operating performance for the three months ended March 31, 2003 prepared in accordance with U.S. GAAP, including condensed consolidated financial information as of March 31, 2003 and December 31, 2002, and for each of the three months ended, March 31, 2003 and 2002.

REVIEW OF FINANCIAL AND OPERATING PERFORMANCE FOR THE THREE MONTHS ENDED MARCH 31, 2003 PREPARED IN ACCORDANCE WITH US GAAP

Date: April 30, 2003

#### Introduction

The following is a summary of the Group's financial and operating performance for the three month March 31, 2003 prepared in accordance with US GAAP. This summary also includes condensed consolidated financial information as of March 31, 2003 and December 31, 2002, and for each of the months ended, March 31, 2003 and 2002 prepared in accordance with US GAAP.

On April 30, 2003, AngloGold issued its results for the quarter ended March 31, 2003 prepared in with IAS and published its report, including condensed consolidated financial information prepare accordance with IAS, for the same period. This information has been submitted to the US Securiti Exchange Commission on Form 6-K.

#### Operating review

Presented in the table below is selected operating data for AngloGold for the three-month periods March 31, 2003 and 2002.

#### Gold production

For the three months ended March 31, 2003, AngloGold's total gold production increased by 25,000 or about 2 percent, to 1.40 million ounces from 1.38 million ounces produced in the same period of this was mainly the result of increased production from the South American operations (2003: 137,

2002: 102,000 oz), the North American operations (2003: 114,000 oz; 2002: 95,000 oz) and the East West African operations (2003: 238,000 oz; 2002: 227,000 oz) in the three months March 31, 2003 we compared to the same period of 2002. Gold production in the three months to March 31, 2003 decreased the South African region (2003: 799,000 oz; 2002: 837,000 oz) and Australian region (2003: 114,000 2002: 116,000 oz) compared to the same period in 2002.

In the three months ended March 31, 2003, AngloGold's total gold production decreased by 9 percent 1.55 million ounces of gold produced during the quarter ended December 31, 2002. This decrease we mainly due to lower grades, particularly at the Morila and Geita operations in the East and West where AngloGold expected the reduction, and lower grades at Great Noligwa in South Africa where the did not improve as expected.

#### Total cash costs and total production costs

Total cash costs for the three months ended March 31, 2003 were \$210 per ounce, \$59 per ounce, or percent, higher than the cash costs of \$151 per ounce recorded in the same period of 2002. This was mainly due to substantially higher cash costs for South African operations in the three month March 31, 2003, which increased by 68 percent when compared to the same period in 2002. This inclin total cash costs at the South African operations was mainly due to the strengthening of the Scrand relative to the US dollar (based on the average exchange rates of the rand against the US do R8.35 and R11.51 during the three months ended March 31, 2003 and 2002, respectively).

Total cash costs for the three months ended March 31, 2003 also increased (by 21 percent) compare quarter ended December 31, 2002 mainly as a result of exchange rate movements discussed in the preparagraph, reduced grade and marginally lower volume mined.

Total production costs for the three months ended March 31, 2003 were \$263 per ounce, \$63 per ounce 32 percent, higher than the total production costs of \$200 per ounce recorded in the same period Total production costs in the first quarter of 2003 also increased (by 17 percent) compared to the ended December 31, 2002.

### Reconciliation of total cash costs and total production costs to the condensed consolidated

#### financial information

Total cash costs and total production costs are calculated in accordance with the guidelines of t Institute industry standard and are not US GAAP measures. The Gold Institute is a non-profit int association of miners, refiners, bullion suppliers and manufacturers of gold products, which has uniform format for reporting total production costs on a per ounce basis. The standard was first 1996 and revised in November 1999.

Total cash costs, as defined in the Gold Institute industry standard are production costs as reconstant statement of operations, less offsite (i.e. central), general and administrative expenses (included costs charged to the mines, central training expenses, industry association fees, refinery charged development costs) and rehabilitation costs, plus royalties and employee termination costs.

Total cash costs as calculated and reported by AngloGold include costs for all mining, processing administration, royalties and production taxes, as well as contributions from by-products, but exdepreciation, depletion and amortization, rehabilitation, employment severance costs, corporate administration costs, capital costs and exploration costs. Total cash costs per ounce are calculated on a dividing total cash costs by ounces of gold produced. Total cash costs have been calculated on a basis for all periods presented.

Total production costs, as defined in the Gold Institute industry standard are total cash costs, using the Gold Institute industry standard, plus amortization, depreciation and rehabilitation corproduction costs as calculated and reported by AngloGold include total cash costs, plus depreciated depletion and amortization, employee severance costs and rehabilitation and other non-cash costs. production costs per ounce are calculated by dividing total production costs by ounces of gold production costs have been calculated on a consistent basis for all periods presented.

Total cash costs and total production costs should not be considered by investors in isolation or alternatives to production costs, net income/(loss) applicable to common stockholders, income/(loss) income tax provision, net cash provided by operating activities or any other measure of financial presented in accordance with US GAAP or as an indicator of the company's performance. While the Institute has provided definitions for the calculation of total cash costs and total production calculation of total cash costs, total cash costs per ounce, total production costs and total proper ounce may vary significantly among gold mining companies, and by themselves do not necessarily provide a basis for comparison with other gold mining companies. However, the company believes to cash costs and total production costs in total and per ounce are useful indicators to investors a management as they provide:

- an indication of profitability, efficiency and cash flows;
- the trend in costs as the mining operations mature over time on a consistent basis; and
- an internal benchmark of performance to allow for comparison against other mining companies. A reconciliation of production costs as included in the company's unaudited condensed consolidate information to total cash costs and to total production costs for each of the three months ended 2003 and 2002 is presented below. In addition the company has also provided below detail of the gold produced in total for each of those periods.

#### Capital expenditures

Capital expenditure during the three months ended March 31, 2003 was \$58 million compared with \$5 million in the same period of 2002, a \$7 million, or 14 percent, increase in capital expenditure with the three months ended December 31, 2002, capital expenditures were approximately one third the first quarter of 2003.

#### Outlook for 2003

Commenting on the results for the three months ended March 31, 2003, Russell Edey, AngloGold's Chairman, and Bobby Godsell, AngloGold's CEO said: "The first quarter of 2003 was notable for operesults which were on target but lower than the two previous quarters. Lower production reflects more normal grades at Morila and lower grades at the Great Noligwa mine. The stronger local curreseven of the eight countries in which we operate, in relation to the US dollar, the currency in wour product, has had a significant negative impact on costs, margins and earnings. These effects least partially offset by an increased average gold price during the period.

Looking ahead to the rest of this year, we anticipate that the currencies in which our costs are denominated, particularly the South African rand will maintain their strength in relation to the remainder of the year and have revised our planning assumptions accordingly. We expect AngloGold earnings for the June quarter to remain under pressure as a result of the exchange rate together grades and mining volume. We do, however, anticipate a gradual recovery by the fourth quarter. "

#### Financial review

Revenues from product sales and other income increased from \$381 million in the three months ended March 31, 2002 to \$484 million in the same period of 2003, a 27 percent increase. This was prime the increase in the gold price in 2003 when compared with 2002 and, to a lesser extent, higher price 2003 compared to 2002. The average spot price of gold was \$352 per ounce during the three months March 31, 2003, \$61 per ounce, or 21 percent, higher than \$291 per ounce, the average spot price three months of 2002. When compared with the quarter ended December 31, 2002, revenues from processales and other income were lower (by 6 percent from \$513 million) in the first quarter of 2003 me the 9 percent decrease in gold production from the quarter ended December 31, 2002 due to lower of the same period of 2003 me and the percent decrease in gold production from the quarter ended December 31, 2002 due to lower the same period of 2003 me and the percent decrease in gold production from the quarter ended December 31, 2002 due to lower the same period of 2003 me and the percent decrease in gold production from the quarter ended December 31, 2002 due to lower the same period of 2003 me and 2002 me and 2003 me and 2

Production costs increased from \$196 million in the three months ended March 31, 2002 to \$287 mil the same period of 2003, which represents a \$91 million or 46 percent increase. Higher production were mainly the result of substantially higher production costs at the South African operations of in the three months ended March 31, 2003, compared with \$111 million in the same period of 2002. increase of \$71 million was primarily due to the strengthening of the South African rand relative dollar. Production costs also increased (by 17 percent from \$245 million) when compared with the ended December 31, 2002 mainly for the same reasons as discussed above.

Depreciation, depletion and amortization also increased, from \$67 million in the three months end 31, 2002 to \$75 million in the same period of 2003, a 12 percent increase. This increase can be the South American operations where depreciation, depletion and amortization expense amounted to million in the three months ended March 31, 2003, compared to \$10 million for the same period in This increase of \$4 million was mainly due to the acquisition during the third quarter of 2002 of 46.25 percent interest in the Cerro Vanguardia mine located in Argentina.

General and administrative expenses increased from \$5 million in the three months ended March 31, \$10 million in the same period of 2003, mainly as a result of annual salary increments, approved changes relating to information technology infrastructure upgrades, and additional and previously positions filled at the corporate office in South Africa. The strengthening of the South African the US dollar also negatively impacted on general and administrative expenses as the majority of are South African rand denominated.

Interest expense decreased from \$12 million recorded in the three months ended March 31, 2002 to million in the same period of 2003, a 33 percent decrease. The decrease in interest expense from due to both lower prevailing LIBOR rates to which most of AngloGold's debt is pegged and the refi AngloGold of its debt with lower interest rate facilities.

A gain on derivatives of \$23 million was recorded in the three months ended March 31, 2003 compara loss of \$23 million incurred in the same period of 2002.

In the three months ended March 31, 2003, income before equity income and income tax amounted to million compared to \$50 million in the same period of 2002.

Deferred income and mining tax expense increased from a net tax benefit of \$41 million recorded in three months of 2002 which included tax credits of \$50 million relating to the disposal of the Frassets, to a net tax charge of \$39 million in the same period of 2003. The Free state assets were at book value, effective January 1, 2002 to Harmony Gold Mining Company Limited and African Rainb Minerals Gold Limited ("ARM").

Net income applicable to common stockholders decreased by 34 percent to \$58 million in the three ended March 31, 2003 from \$88 million recorded in the same period of 2002 and by 37 percent compassed million for the three months ended December 31, 2002.

Net cash provided by operating activities during the three months ended March 31, 2003 amounted t million compared with \$157 million in the same period of 2002.

In the three months ended March 31, 2003, AngloGold used \$58 million comprising mainly of payment capital expenditure and \$187 million cash in investing and financing activities, respectively. Of financing activities included dividends paid of \$185 million. A final dividend of 675 South Afriordinary share for the year ended December 31, 2002 was paid to registered shareholders on Februar 2003 and a dividend of 82.12 US cents per each American Depositary Share (ADS) was paid to holder ADSs on March 10, 2003. Each ADS represents one ordinary share. The effect of exchange rate characteristics are positive \$10 million during the three months ended March 31, 2003.

As a result of the factors discussed above, AngloGold had cash and cash equivalents of \$340 milli March 31, 2003 compared with \$413 million at December 31, 2002, representing a decrease in cash a cash equivalents of \$73 million from 2002. At March 31, 2003, AngloGold had available but undraw of \$301 million under its credit facilities.

During 2003, approximately \$89 million of AngloGold's debt is scheduled to mature. AngloGold experiment of debt scheduled to mature in 2003 from existing cash resources, cash generation future operations and its present and future debt facilities.

#### Gold market

During the first quarter of 2003, the gold price appeared to have been influenced most directly be evolving international conflict over Iraq, and to a lesser degree, by movements from time to time of the US dollar. The correlation observed by AngloGold between trading activity in gold futures York Comex and the spot price of gold became even more direct.

Speculators were reported to continue to increase their long positions in gold during the first was international conflict over Iraq continued to escalate. As a result, Comex open positions were reach a peak net long position in gold in early February 2003, equivalent to just over 14 million AngloGold's view, the removal of uncertainty about US intentions in Iraq saw that long position resteadily from early February 2003, starting from the occasion of US Secretary of State Colin Power to the United Nations General Assembly on February 5, 2003, which saw the spot gold price fall by per ounce in the following week. The net long position on Comex was reported to have fallen to smillion ounces in early April 2003, taking the gold price down with it to a low of \$318 per ounce AngloGold's view, this level of net long positions is close to what has been a core net long positional exchange for the past 18 months. If this core position does not change, AngloGold expects the massettle around these levels, with likely price recovery on the upside.

As far as the impact of the conflict in Iraq is concerned, it would seem to AngloGold that this he through the gold market, and that the market is back to a more or less neutral state in regard to AngloGold believes that, in the medium term, however, important economic factors will continue to Most important of these appear to be the health of the US dollar and the state of major equity mandangloGold's view, the US economy will remain vulnerable, and the US dollar is likely to continue in the medium term; only the weak condition of the European and Japanese economies seems to have delayed this correction. Aside from the price spike in February 2003 induced by heightened interpretation over Iraq, the gold price appeared to have continued to move in line with the weakening dollar and should encourage investor interest in gold.

The physical market for the metal appears to remain weak, and 2002 was a disappointing year for godemand in a number of sectors. Indian imports of gold were reported to be down by over 20 percent by comparison with 2001. Although gold demand in India was reported to be strong in late 2002, the strength does not appear to have carried through to 2003. However, AngloGold believes that there to expect an improvement in Indian demand as 2003 progresses, as the current lower spot gold price should encourage buying, and the balance of this year contains a high proportion of propitious damarriage in the Hindu calendar. AngloGold believes that physical gold offtake in the Middle East fragile due to the conflict in Iraq, and unfavorable economic circumstances in the developed econgenerally have not helped gold offtake during the past year. All in all, in AngloGold's view, the an encouraging period for physical demand, and underlies the need for some effort to support and the metal in the important markets for gold.

The spot price opened at \$348 per ounce in January 2003 and closed at \$337 per ounce in March 2000 compared with \$279 per ounce in January 2002 and \$303 per ounce in March 2002. The average spot of gold was \$352 per ounce during the three months ended March 31, 2003, \$61 per ounce, or 21 per higher than \$291 per ounce, the average spot price in the first three months of 2002. During the months of 2003, the highest spot price of gold was \$389 per ounce compared to a high of \$308 per the same period in 2002. The lowest spot price of gold was \$326 per ounce during the three months

March 31, 2003, 18 percent higher than \$277 per ounce, the lowest spot price of gold for the same ended March 31, 2002.

#### Hedging overview

AngloGold manages its revenue risk through an actively directed forward sales program. The board directors has given management a mandate to sell forward no more than 50 percent of five years' percent over a ten-year period. AngloGold has seldom been close to this limit and then mainly through acquisitions and debt financing of new assets where the terms of loans have required that a portion production from these assets is sold forward.

At March 31, 2003, the net hedge position of AngloGold was at 9.34 million ounces, almost 1 milli lower than the hedge position at December 31, 2002 and 28 percent lower than the net hedge position 12.90 million ounces as at March 31, 2002. The marked-to market-valuation of this position at March 2003 was negative \$251.5 million. These figures reflect an ongoing reduction in overall forward commitments of AngloGold. For the remaining period of 2003, AngloGold has outright forward price commitments in respect of 1.05 million ounces or some 23 percent of the forecast production of 2003.

#### AngloGold's net delta open hedge position at March 31, 2003

At March 31, 2003, AngloGold had outstanding the following forward-pricing commitments against fur production. The total net delta tonnage of the hedge on this date was 9.34 million ounces (at Dec 2002: 10.28 million ounces). The delta position indicated reflects the nominal amount of the optiby the mathematical probability of the option being exercised. This is calculated using the Black option formula with the ruling market prices, interest rates and volatilities as at March 31, 200

The marked-to-market value of all hedge transactions making up the hedge positions was a negative US\$251.5 million at March 31, 2003 (at December 31, 2002: negative US\$446.6 million). These value based on a gold price of US\$336.75 per ounce, exchange rates of R/US\$7.85 and A\$/US\$0.602 and the prevailing market interest rates and volatilities at the time.

At April 29, 2003, the marked-to-market value of the hedge book was a negative US\$154.9 million be a gold price of US\$332.75 per ounce and exchange rates of R/US\$7.2550 and A\$/US\$0.6183 and the prevailing market interest rates and volatilities at the time.

These marked-to-market valuations are not predictive of the future value of the hedge position, of future impact on the revenue, of AngloGold. The valuation represents the cost of buying all hedge at the time of valuation, at market prices and rates available at the time.

### Recent developments

### During the three months ended March 31, 2003 AngloGold made the following announcements:

On March 13, 2003, AngloGold announced that its wholly-owned subsidiary, AngloGold Australia Limi signed a new joint venture agreement with Striker Resources NL and De Beers Australia Exploration to undertake further exploration work covering an area in excess of 17,000 square kilometres in t Kimberley region of Western Australia. An expenditure of \$4.61 million (A\$7.75 million) entitles a 51 percent return on income.

On April 7, 2003, the Jerritt Canyon Joint Venture partners, AngloGold and Meridian Gold, gave not termination of agreement, following a release on February 27, 2003, in which AngloGold announced had entered into a purchase and sale agreement with Queenstake Resources USA Inc. for its interest Jerritt Canyon Joint Venture. Queenstake failed to meets its obligations under the agreement prince scheduled closing on March 31, 2003.

On April 8, 2003, AngloGold announced that it had reached agreement with Helix Resources Limited, sale of its interests in the Gawler Craton and Tarcoola Joint Ventures in South Australia. Under the agreement, consideration will comprise a \$0.9 million (A\$1.5 million) cash payment, 2.5 milli Helix shares issued at A\$0.20 per share, and 2.5 million Helix options of A\$0.25 per option, exemple before November 30, 2003. The offer is subject to various conditions being met.

On April 30, 2003, AngloGold announced that at the company's annual general meeting held on April 2003, all the ordinary and special resolutions, as specified in the notice of meeting dated March were passed by the requisite majority of shareholders. The special resolutions will be lodged wi Registrar of Companies for registration.

### Retiring Director

As previously disclosed, Dr. V K Fung, one of the company's directors who retired by rotation at general meeting held on April 30, 2003, did not wish to offer himself for re-election. As no new appointed at the annual general meeting, the company's board of directors now comprises 14 direct executive directors and thirteen non-executive directors, three of whom are alternates. Of the 1 executive directors, five non-executive directors are affiliated with the company's parent, Angle and five are independent of management and free from any business relationship which could materianterfere with the exercise of their independent judgment.

### Draft Mineral and Petroleum Royalty Bill

Following the publication by the South African Government of the draft Mineral and Petroleum Royal March 2003, which proposes prospecting, mining and mineral rights to be subject to a State royalt calculated as 3 percent of gross revenue in the case of gold, AngloGold is preparing its represent Government. While AngloGold accept the general proposition of a charge for the extraction of the non-renewable mineral resources, AngloGold believe that this should be done in a way that does not the already high mining tax burden in South Africa to make mining here internationally uncompetitive particular, AngloGold favor a profit-based system of calculating royalties, rather than the current revenue-based approach and AngloGold will also be advocating a review of the overall tax burden be the gold mining industry, including the proposed royalties, to ensure the continued competitivenessector. AngloGold will be pursuing these and other concerns in the open debate, which is anticipal place in the near future.

### AngloGold Fund supports Ginsberg Primary School in the Eastern Cape

AngloGold's social investment vehicle in South Africa is The AngloGold Fund which makes grants to value of some \$1.8 million each year. In evaluating the hundreds of proposals that come its way, looks for community-initiated projects, believing that development works best where people are em to work towards their own advancement, and for projects that contribute to the longer-term beneficiation in which they are situated. Ginsberg Primary School meets these criteria admirably.

An independent school situated in Ginsberg, King William's Town, Ginsberg Primary is a remarkable

institution. In the midst of an impoverished community, it is providing superior education and to of the school is such that each year many applicants have to be turned away. The principal, Henre explains the Ginsberg philosophy: "We want our learners to be given a holistic training that attempty to the principal of the physical, mental and spiritual development and that will enable them to lead useful lives in soci

While pupils are given a sound grounding in their school subjects by a staff of well-qualified and teachers, they can also sign on for a range of extra-mural activities music, needlework, art, tegardening.

What makes the achievements of Ginsberg Primary so noteworthy is that the school embarked on its enrichment programme under the most difficult of circumstances. For instance, when needlework was introduced in 2000, there were just two sewing machines with teachers having to manage in crowded classrooms. Music was started in 2001 with one violin and one piano in the principal's office.

But all of that has changed for Ginsberg Primary now boasts a new double-storey classroom block, a grant of \$0.1 million from The AngloGold Fund. The block comprises four regular classrooms and "special" classrooms a science laboratory, a computer room, a music room and a needlework room, equipped.

Mr Kachoka commented: "The new building is a beacon of hope to those of us involved in teaching how our learners are being given the privilege of an education that they wouldn't otherwise get in the world."

And it is not only the pupils of the school who will benefit from the additional facilities. For members of the community will be able to access these in the afternoons when staff members will be hand to assist.

The township of Ginsberg is the birthplace and final resting place of Black Consciousness leader It is certain that he would have been proud of the achievements of the principal and staff of Gin Primary, and of the community in which a school of this calibre has flourished.

### Forward-looking statements

Except for historical information, there may be matters discussed in this report of financial and performance that are forward-looking statements. In particular, the statements made under "Outlot 2003" regarding AngloGold's operating and financial performance and under "Gold market" regarding future performance of the gold market are forward looking statements. Any such statement is only prediction and actual results, costs or events may differ materially. For a discussion of import including, but not limited to, development of AngloGold's business, the economic outlook in the generations regarding gold prices and production, and other factors which could cause actual results and events to differ materially from such forward-looking statements, refer to AngloGold's annual Form 20-F for the year ended December 31, 2002 which was filed with the United States Securities Exchange Commission (SEC) on April 7, 2003.

11

### Condensed Consolidated Financial Information for the three months ended March 31, 2003
