Item 5. Other Events.

On May 9, 2001, the Registrant issued the following press release  
announcing its operating results on an unaudited basis for the third quarter  
and nine months of fiscal year 2001 ended March 31, 2001:

PRECISION OPTICS CORPORATION ANNOUNCES THIRD QUARTER RESULTS

GARDNER, MASSACHUSETTS - Precision Optics Corporation, Inc. (Nasdaq: POCI)  
announced today operating results on an unaudited basis for the third quarter  
and nine months of fiscal year 2001 ended March 31, 2001. Highlights of the  
quarter included record production and sales of Dense Wavelength Division  
Multiplexing (DWDM) filters and initial sales of a new line of DWDM filter test  
instruments.

OPERATING RESULTS

Revenues for the quarter were \$1,133,984 compared to \$784,503 for the same  
period in fiscal year 2000, an increase of 44.5%. Revenues for the quarter

## Edgar Filing: PRECISION OPTICS CORPORATION INC - Form 8-K

increased 45.7% sequentially over the quarter ended December 31, 2000. Net loss was \$1,110,948, or \$0.11 per share, compared to \$667,662, or \$0.08 per share, for the same period last year. The weighted average common shares outstanding were 10,498,908 compared to 8,471,946 for the same period last year.

For the nine months ended March 31, 2001, revenues were \$2,800,817 compared to \$2,088,791 for the same period last year, an increase of 34.1%. Net loss was \$2,402,833, or \$0.23 per share, compared to \$1,818,547 or \$0.23 per share, for the same period last year. The weighted average common shares outstanding were 10,464,586 compared to 7,803,594 for the same period last year.

The increase in revenues for the quarter ended March 31, 2001 over last year's third quarter was driven by initial sales of DWDM filter test instrumentation and higher sales of DWDM filters and medical products.

### 200 GHZ DWDM FILTERS

During the quarter ended March 31, 2001, sales of 200 GHz DWDM filters more than doubled over last year's third quarter to a record quarterly level, and represented 19.4% and 15.6%, respectively, of total revenues for the quarter and nine months ended March 31, 2001.

2

As previously reported, this growth had been interrupted during the previous quarter pending the renegotiation of pricing and delivery terms on several large orders amidst downward pricing pressure in the DWDM market. During the quarter ended March 31, 2001, these negotiations were successfully completed and shipments were resumed. However, one customer, who was a participant in these negotiations, and accounted for 5.7% and 3.9%, respectively, of total revenues for the quarter and nine months ended March 31, 2001, subsequently canceled the balance of its order prior to quarter end due to the loss of a contract with one of its own customers.

Production levels and yields for 200 GHz filters have continued to improve significantly. Sales this quarter through the first week of May, none of which were made in connection with the canceled order referred to above, have already exceeded filter sales for the entire quarter ended March 31, 2001. Current orders as of March 31, 2001 for 200 GHz filters totaled approximately \$885,000, with delivery scheduled during the quarters ending June and September, 2001. Discussions are now proceeding to secure new and repeat filter orders extending beyond this period.

### 100 GHZ DWDM FILTERS

In late March the Company took delivery of a new state-of-the-art 100 GHz production system. Installation was completed in April, with full production and shipment of 100 GHz filters expected to begin in the quarter ending June 30, 2001.

### DWDM FILTER TEST INSTRUMENTATION

Also in March, the Company introduced two major new products at the Optical Fiber Communication Conference (OFC) trade show -- the manual Gen III(TM) DWDM Test Fixture for characterizing telecommunications filters and a fully automated filter testing system. Both products are based on patent-pending technology and allow greatly enhanced speed and accuracy in the measurement of filters. These were received enthusiastically. Initial shipments of manual test fixtures represented 8.7% of total Company revenues for the quarter, and additional units are scheduled for delivery during the current quarter. Product development is

## Edgar Filing: PRECISION OPTICS CORPORATION INC - Form 8-K

continuing on the automated filter testing system, with initial sales anticipated during the next fiscal year.

### PRODUCT AND INFRASTRUCTURE DEVELOPMENT

The Company has continued to invest aggressively in research, development and capital equipment to support increased participation in the long-term opportunities the telecommunications industry offers. In particular, work has accelerated on improved, higher-capacity manufacturing processes for 200 GHz filter production, and development and commercialization of 100 GHz filters. With the installation of the 100 GHz system described above, the Company now has proprietary state-of-the-art systems in place for producing both 100 and 200 GHz filters. These systems have accounted for a substantial portion of the Company's recent research and development and capital equipment expenses. For the nine months ended March 31, 2001, R&D expenses were approximately \$2.2 million (up 71% from last year), and capital equipment expenditures were approximately \$3.3 million, up more than 350% from the same period last year. With a

3

large part of the DWDM infrastructure currently in place, R&D and capital equipment expenditure increases of this magnitude are not anticipated in the foreseeable future.

### MEDICAL PRODUCTS

Sales of medical products were up 19.8% over last year's third quarter, and represented 77% of total revenues for the nine months ended March 31, 2001. However, the Company's principal customer for stereo endoscopes has notified the Company that, upon completion of current orders in June 2001, it would cease placing orders for stereo endoscopes with the Company in favor of other sources of supply. Sales of stereo endoscopes to this customer amounted to 35% of total revenues for the nine months ended March 31, 2001.

### OUTLOOK

The loss of the Company's principal customer for stereo endoscopes will have an adverse impact on near-term medical sales unless these revenues are replaced. However, we are moving aggressively to offset this reduction in revenue with new product offerings to other major medical customers. One example is a new 5mm laparoscope which began shipping in April following successful prototype trials.

While the current economic slowdown has had significant impact throughout the telecommunications industry, the Company believes that its current DWDM filters and filter testing products are well positioned to help customers respond to continuing price pressures as well as long-term demand for high-performance components.

A major thrust of Company activity over the last two quarters has been the development of higher-volume, higher-yield and lower-cost production and test facilities for both 200 and 100 GHz filters. April 2001 marked the first month in which the Company attained consistent production volumes over an entire month's production, and work is continuing to improve yield per deposition run, helped by the significantly higher throughput of the Company's new manual Gen IIITM DWDM Test Fixture, which is also generating revenue as a separate product. The automatic test system currently being integrated into production lines will enable further increases in throughput, and should begin to generate its own additional sales in the coming fiscal year. The Company believes that these developments in the DWDM area are positive indicators for near-term improvements in telecommunications-related sales.

### ABOUT PRECISION OPTICS

Precision Optics Corporation, a leading manufacturer of optical thin films and optical instruments since 1984, designs and manufactures high-quality optical thin film coatings, medical instruments, and other advanced optical systems. Major applications for the Company's thin film coatings include DWDM filters used to increase the bandwidth capacity of fiber-optic telecommunications networks. The Company's medical instrumentation line includes laparoscopes, arthroscopes, endocouplers and a world-class 3-D endoscope for use in minimally invasive surgical procedures.
