

MARKET VECTORS ETF TRUST  
Form 497K  
August 19, 2015

**MARKET VECTORS® OIL REFINERS ETF**

Ticker: CRAK  
Principal U.S. Listing Exchange: NYSE Arca, Inc.  
SUMMARY PROSPECTUS  
AUGUST 18, 2015

**CRAKSUM**

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's prospectus and other information about the Fund online at <http://www.vaneck.com/library/etfs/>. You can also get this information at no cost by calling 888.MKT.VCTR, or by sending an email request to [info@vaneck.com](mailto:info@vaneck.com). The Fund's prospectus and statement of additional information, both dated August 18, 2015, are incorporated by reference into this summary prospectus.

**INVESTMENT OBJECTIVE**

Market Vectors Oil Refiners ETF (the Fund) seeks to replicate as closely as possible, before fees and expenses, the price and yield performance of the Market Vectors® Global Oil Refiners Index (the Index).

**FUND FEES AND EXPENSES**

The following tables describe the fees and expenses that you may pay if you buy and hold shares of the Fund (Shares).

**Shareholder Fees** (*fees paid directly from your investment*)      None

**Annual Fund Operating Expenses**

(*expenses that you pay each year as a percentage of the value of your investment*)

Management Fee	0.50%
Other Expenses <sup>(a)</sup>	0.14%
Total Annual Fund Operating Expenses <sup>(b)</sup>	0.64%
Fee Waivers and Expense Reimbursement <sup>(b)</sup>	-0.05%
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement <sup>(b)</sup>	0.59%

- (a) Other Expenses are based on estimated amounts for the current fiscal year.
- (b) Van Eck Associates Corporation (the Adviser) has agreed to waive fees and/or pay Fund expenses to the extent necessary to prevent the operating expenses of the Fund (excluding acquired fund fees and expenses, interest expense, offering costs, trading expenses, taxes and extraordinary expenses) from exceeding 0.59% of the Fund's average daily net assets per year until at least May 1, 2017. During such time, the expense limitation is expected to continue until the Fund's Board of Trustees acts to discontinue all or a portion of such expense limitation.

**EXPENSE EXAMPLE**

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. This example does not take into account brokerage commissions that you pay when purchasing or selling Shares of the Fund.

The example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that your investment has a 5% annual return and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

**YEAR EXPENSES**

1	\$	60
3	\$	200

**PORTFOLIO TURNOVER**

The Fund will pay transaction costs, such as commissions, when it purchases and sells securities (or turns over its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or

in the example, may affect the Fund's performance. Because the Fund is newly organized, no portfolio turnover figures are available.

## PRINCIPAL INVESTMENT STRATEGIES

The Fund normally invests at least 80% of its total assets in securities that comprise the Fund's benchmark index. The Index is comprised of equity securities and depositary receipts of companies that generate at least 50% of their revenues from (or, in certain circumstances, have at least 50% of their assets related to) crude oil refining. Products of these companies may include gasoline, diesel, jet fuel, fuel oil, naphtha, and other petrochemicals. Companies which operate in the marketing and distribution of these products may be included in the Index if crude oil refining is performed in company-owned refineries. Such companies may include medium-capitalization companies and foreign and emerging market issuers. As of June 30, 2015, the Index included 26 securities of companies with a market capitalization range of between approximately \$1.0 billion and \$49.8 billion and a weighted average market capitalization of \$17.5 billion. These amounts are subject to change. The Fund's 80% investment policy is non-fundamental and may be changed without shareholder approval upon 60 days' prior written notice to shareholders.

The Fund, using a passive or indexing investment approach, attempts to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index.

The Fund may concentrate its investments in a particular industry or group of industries to the extent that the Index concentrates in an industry or group of industries. As of June 30, 2015, the Index was concentrated in the oil refining industry and the energy sector.

## PRINCIPAL RISKS OF INVESTING IN THE FUND

**Investors in the Fund should be willing to accept a high degree of volatility in the price of the Fund's Shares and the possibility of significant losses. An investment in the Fund involves a substantial degree of risk. An investment in the Fund is not a deposit with a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Therefore, you should consider carefully the following risks before investing in the Fund, each of which could significantly and adversely affect the value of an investment in the Fund.**

**Risk of Investing in the Oil Refining Industry.** The profitability of companies in the oil refining industry is related to supply and demand of all sources of energy. The price of energy, the earnings of companies in the oil refining industry, and the value of such companies' securities have recently experienced significant volatility. This may adversely impact companies operating in the oil refining industry. Such companies are also subject to risks of changes in commodity prices, exploration and production spending, interest rates, exchange rates and the price of oil and gas, government regulation, the imposition of import controls, world events, negative perception, depletion of resources, development of alternative energy sources, technological developments, labor relations and general economic conditions, as well as market, economic and political risks of the countries where oil refining companies are located or do business, fluctuations caused by events relating to international politics, including political instability, expropriation, social unrest and acts of war, acts of terrorism, economic sanctions, energy conservation, the success of exploration projects and tax and other governmental regulatory policies. Oil refining companies are also subject to risks related to environmental damage, injury to persons and loss of life or the destruction of property, any of which could expose such companies to, among other things, the risk of litigation, clean-up or other remedial costs and disruption of operations. Additionally, oil refining companies are vulnerable to disruptions in operations, including those due to weather-related events such as hurricanes and transportation-related disruptions that may affect the flow of oil to the oil refining companies. Oil refining companies operate in a highly competitive and cyclical industry, with intense price competition. The operations of oil refineries are subject to stringent and complex federal, state and local

environmental laws and regulations. New and more stringent environmental and health and safety laws, regulations and permit requirements or stricter interpretations of current laws or regulations could impose substantial additional costs on companies in which the Fund invests. Moreover, failure to comply with any such requirements could have a material adverse effect on a company, and there can be no assurance that companies will at all times comply with all applicable environmental laws, regulations and permit requirements. A significant portion of their revenues may depend on a relatively small number of customers, including governmental entities and utilities.

**Risk of Investing in the Energy Sector.** To the extent that the Index continues to be concentrated in the energy sector, the Fund will be sensitive to changes in, and its performance will depend to a greater extent on, the overall condition of the energy sector. Companies operating in the energy sector are subject to risks including, but not limited to, economic growth, worldwide demand, political instability in the regions that the companies operate, government regulation stipulating rates charged by utilities, interest rate sensitivity, oil price volatility, energy conservation, environmental policies, depletion of resources and the cost of providing the specific utility services. Recently, the price of oil has declined significantly and experienced significant volatility, which has adversely impacted companies operating in the energy sector. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters.

**Equity Securities Risk.** The value of the equity securities held by the Fund may fall due to general market and economic conditions, perceptions regarding the markets in which the issuers of securities held by the Fund participate, or factors relating to specific issuers in which the Fund invests. Equity securities are subordinated to preferred securities and debt in a company's capital structure with respect to priority in right to a share of corporate income, and therefore will be subject to greater dividend risk than preferred securities or debt instruments. In addition, while broad market measures of equity securities have historically generated higher average returns than fixed income securities, equity securities have generally also experienced significantly more volatility in those returns, although under certain market conditions fixed income securities may have comparable or greater price volatility.

**Risk of Investing in Depositary Receipts.** The Fund may invest in depositary receipts, which involve similar risks to those associated with investments in foreign securities. Depositary receipts are receipts listed on U.S. or foreign exchanges issued by banks or trust companies that entitle the holder to all dividends and capital gains that are paid out on the underlying foreign shares. Investments in depositary receipts may be less liquid than the underlying shares in their primary trading market and, if not included in the Index, may negatively affect the Fund's ability to replicate the performance of the Index.

**Risk of Investing in Foreign Securities.** Investments in the securities of foreign issuers involve risks beyond those associated with investments in U.S. securities. These additional risks include greater market volatility, the availability of less reliable financial information, higher transactional and custody costs, taxation by foreign governments, decreased market liquidity and political instability. Because certain foreign securities markets may be limited in size, the activity of large traders may have an undue influence on the prices of securities that trade in such markets. Because the Fund may invest in securities denominated in foreign currencies and some of the income received by the Fund may be in foreign currencies, changes in currency exchange rates may negatively impact the Fund's return. The risks of investing in emerging market countries are greater than risks associated with investments in foreign developed countries.

**Risk of Investing in Emerging Market Issuers.** Investments in securities of emerging market issuers are exposed to a number of risks that may make these investments volatile in price or difficult to trade.

Political risks may include unstable governments, nationalization, restrictions on foreign ownership, laws that prevent investors from getting their money out of a country and legal systems that do not protect property rights as well as the laws of the United States. Market risks may include economies that concentrate in only a few industries, securities issues that are held by only a few investors, liquidity issues, limited trading capacity in local exchanges and the possibility that markets or issues may be manipulated by foreign nationals who have inside information.

**Special Risk Considerations of Investing in Asian Issuers.** The Fund invests in securities issued by Asian issuers and the Fund will be subject to the risk of investing in such issuers. Investment in securities of issuers in Asia involves risks and special considerations not typically associated with investment in the U.S. securities markets. Certain Asian economies have experienced over-extension of credit, currency devaluations and restrictions, high unemployment, high inflation, decreased exports and economic recessions. Economic events in any one Asian country can have a significant effect on the entire Asian region as well as on major trading partners outside Asia, and any adverse effect on some or all of the Asian countries and regions in which the Fund invests. The securities markets in some Asian economies are relatively underdeveloped and may subject the Fund to higher action costs or greater uncertainty than investments in more developed securities markets. Such risks may adversely affect the value of the Fund's investments.

**Risk of Investing in Medium-Capitalization Companies.** Medium-capitalization companies may be more volatile and more likely than large-capitalization companies to have narrower product lines, fewer financial resources, less management depth and experience and less competitive strength. In addition, these companies often have greater price

volatility, lower trading volume and less liquidity than larger more established companies. Returns on investments in securities of medium-capitalization companies could trail the returns on investments in securities of large-capitalization companies.

**Issuer-Specific Changes Risk.** The value of individual securities or particular types of securities in the Fund's portfolio can be more volatile than the market as a whole and can perform differently from the value of the market as a whole, especially if the Fund's portfolio is concentrated in a country, group of countries, region, market, industry, group of industries, sector or asset class. The value of securities of smaller issuers can be more volatile than that of larger issuers.

**Market Risk.** The prices of the securities in the Fund are subject to the risks associated with investing in the securities market, including general economic conditions and sudden and unpredictable drops in value. An investment in the Fund may lose money.

**Index Tracking Risk.** The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs a number of operating expenses not applicable to the Index and incurs costs associated with buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. The Fund also bears the costs and risks associated with buying and selling securities while such costs and risks are not factored into the return of the Index. The Fund may not be fully invested at times either as a result of cash flows into the Fund or reserves of cash held by the Fund to pay expenses. In addition, the Fund may not be able to invest in certain securities

included in the Index, or invest in them in the exact proportions they are represented in the Index, due to legal restrictions or limitations imposed by the governments of certain countries, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The Fund is expected to value certain of its investments based on fair value prices. To the extent the Fund calculates its net asset value ( NAV ) based on fair value prices and the value of the Index is based on securities' closing prices on local foreign markets (*i.e.*, the value of the Index is not based on fair value prices), the Fund's ability to track the Index may be adversely affected. For tax efficiency purposes, the Fund may sell certain securities to realize losses, causing it to deviate from the Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Index.

**Replication Management Risk.** An investment in the Fund involves risks similar to those of investing in any fund of equity securities traded on an exchange, such as market fluctuations caused by such factors as economic and political developments, changes in interest rates and perceived trends in security prices. However, because the Fund is not actively managed, unless a specific security is removed from the Index, the Fund generally would not sell a security because the security's issuer was in financial trouble. Therefore, the Fund's performance could be lower than funds that may actively shift their portfolio assets to take advantage of market opportunities or to lessen the impact of a market decline or a decline in the value of one or more issuers.

**Premium/Discount Risk.** Disruptions to creations and redemptions, the existence of extreme market volatility or potential lack of an active trading market for Shares may result in Shares trading at a significant premium or discount to NAV. If a shareholder purchases Shares at a time when the market price is at a premium to the NAV or sells Shares at a time when the market price is at a discount to the NAV, the shareholder may sustain losses. In addition, because certain of the Fund's underlying securities trade on exchanges that are closed when the NYSE Arca, Inc. ( NYSE Arca ) (*i.e.*, the exchange that Shares of the Fund trade on) is open, there are likely to be deviations between the current pricing of an underlying security and the closing security's price (*i.e.*, the last quote from its closed foreign market) resulting in premiums or discounts to NAV that may be greater than those experienced by other exchange-traded funds ( ETFs ).

**Non-Diversified Risk.** The Fund is classified as a non-diversified investment company under the Investment Company Act of 1940, as amended (the 1940 Act ). Therefore, the Fund may invest a relatively high percentage of its assets in a smaller number of issuers or may invest a larger proportion of its assets in obligations of a single issuer. As a result, the gains and losses on a single investment may have a greater impact on the Fund's NAV and may make the Fund more volatile than more diversified funds. The Fund may be particularly vulnerable to this risk because the Index it seeks to replicate is comprised of securities of a very limited number of companies.

**Concentration Risk.** The Fund's assets may be concentrated in a particular sector or sectors or industry or group of industries to the extent the Index concentrates in a particular sector or sectors or industry or group of industries. To the extent that the Index continues to be concentrated in the oil refining industry and energy sector, the Fund will be subject to the risk that economic, political or other conditions that have a negative effect on that industry and sector will negatively impact the Fund to a greater extent than if the Fund's assets were invested in a wider variety of sectors or industries.

## PERFORMANCE

The Fund has not yet commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at [www.marketvectorsetfs.com](http://www.marketvectorsetfs.com).

## PORTFOLIO MANAGEMENT

**Investment Adviser.** Van Eck Associates Corporation.

**Portfolio Managers.** The following individuals are primarily and jointly responsible for the day-to-day management of the Fund's portfolio:

<b>Name</b>	<b>Title with Adviser</b>	<b>Date Began Managing the Fund</b>
Hao-Hung (Peter) Liao	Portfolio Manager	Since Inception
George Chao	Portfolio Manager	Since Inception

**PURCHASE AND SALE OF FUND SHARES**

The Fund issues and redeems Shares at NAV only in a large specified number of Shares, each called a Creation Unit, or multiples thereof. A Creation Unit consists of 50,000 Shares.

Individual Shares of the Fund may only be purchased and sold in secondary market transactions through brokers. Shares of the Fund are expected to be approved for listing, subject to notice of issuance, on NYSE Arca and because Shares will trade at market prices rather than NAV, Shares of the Fund may trade at a price greater than or less than NAV.

## **TAX INFORMATION**

The Fund's distributions are taxable and will generally be taxed as ordinary income or capital gains.

## **PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES**

The Adviser and its related companies may pay broker-dealers or other financial intermediaries (such as a bank) for the sale of the Fund Shares and related services. These payments may create a conflict of interest by influencing your broker-dealer or other intermediary or its employees or associated persons to recommend the Fund over another investment. Ask your financial adviser or visit your financial intermediary's website for more information.
